MOTOROLA (PDR's) PAGING DATA RECEIVERS.
"P.D.R."

UHF 450/460 MHZ band - (Bravo pager/Xtal Rcvr's.)

These are pretty neat.

Small black box with Paging rcvr' circuitry inside.
Basically it's a UHF Bravo Pager Receiver board that "snaps-on" to a bigger
logic board.
Each PDR holds 4 CAPcodes/Addresses.

BNC connector.
Outputs TTL/RS232 from 16 pin Maxtrac style connector.
Only requires a 9V battery to operate.

Very cool for your custom paging control projects.
Or for interfacing with Serial/TCP/IP.
Use it to decode POCSAG/Pages, control LED sign Boards, machinery, etc...

Get details here:
http://www.mot.com/MIMS/MSPG/Products/OEM/paging_data_rcvr/

Get Tech Specs here:
http://www.mot.com/MIMS/MSPG/Products/OEM/paging_data_rcvr/specs.html

***This deal include the following:
1 PDR complete in housing w/ UHF rcvr.
1 PDR complete with no Housing w/UHF rcvr.
1 Programming/Interface cable.
All neccesary software/development tools & documentation.
+ more...

Asking $175 for all + shipping.
No COD - Pre-Pay only.

Located in Bay Area, Ca.

Very Unique Motorola Item & a serious Techie toy!

Email: jg@thegrid.net

There is currently legislation where friends and family can call and rat out old folks that shouldn't hold a drivers license due to lost vision, hearing, motor skills, etc. The State takes the anonymous tip and retests the suspects.

Maybe we could get that kind of rule going in the amateur service so we don't have to wait for the actuarial tables plus 10 years for changes.

I appologize about that formating of the previous post, something went wrong with it, so I am reposting it hoping it works properly this time. This is the article about Clinton's
communist past that came out just yesterday. After you read this, youll understand why
Clinton is going after guns, scanners, etc.
-- -- -- --
Current law allows for the reproduction of articles for educational purposes.
By Joel A. Ruth
ï¿½ 1999 WorldNetDaily.com

Psssst!! Don't tell anyone. ...

Future U.S. President paid homage to Lenin's Mummy during Christmas. ...
Youthful Associations account for present predilections. ...
Better start arming yourselves and hiding your weapons. ...

It was five days before Christmas, 1969. A time of year when Americans are busy converging on family, celebrating Chanukah, offering prayers of thanksgiving, out

caroling, trimming trees, or, as Christians, preparing to rejoice in the birth of their Savior.
But while most Americans were wrapping gifts and worshipping before God, the future
President of the United States was standing in silent tribute and awe before the mummy
of Vladimir Lenin. How did this happen? On December 19, 1969, Bill Clinton had boarded an Aeroflot flight from London for the USSR to Moscow, the center of world
atheism and the capital of the Soviet-Marxist state.

William Jefferson Clinton's pilgrimage to the Soviet Union was the climax of a busy fall
semester as a "Rhodes Scholar" at Oxford. It should perhaps be mentioned to those

impressed by such presumed status that Rhodes Scholarships are granted to individuals
passing ideological muster whose sentiments during the interview process are reflective
of acceptable left-wing views to the selection committees, and not because of good
grades.

Once in England, Clinton lived up the expectations of his promoters and joined the

British Peace Council, which was established by the British Communist Party. Quickly,
Clinton helped the council organize other expatriate Americans and draft-dodgers for
anti-war demonstrations on October 15, 1969 and again on November 16, 1969 in front of
the U.S. Embassy in London. The British press, at that time, reported that the protestors
chanted, "Ho, Ho, Ho," and "Ho-Chi Minh, Viet Cong is gonna win."

Shortly after that, Clinton joined with other pro-communist and anti-American protestors
on a trip to Norway to demonstrate in opposition to that Nation's desire to join NATO.

Activities as Clinton's were not at all out of character for Oxford students during that
period and it has been estimated that even today, upwards of 60 percent of all Oxford
professors hold moderate to extreme Socialist views. For such, the University had long
been the home recruiting ground of the international communist movement. Its successes
were exemplified by their recruitment of some of Bill Clinton's fellow alumni, notably the
traitors Kim Philby and Donald McClean.

While Bill Clinton has never explained who paid for his trip to Moscow, he was
accompanied by a friend and fellow Oxford student, Czech Jan Kopold. They were to

attend a meeting of the War Moratorium Committee to be held January 2, 1970. Upon

arrival, Clinton did not check into a youth hostel, but rather stayed at the Hotel National,
the most exclusive and expensive one in Moscow of that time -- a ritzy place usually
reserved for foreign ambassadors and high-level Communist Party apparatchiks.

In today's terms, that trip would probably cost several thousand dollars. Clinton only
had his tiny $275 Rhodes stipend to live on and never held a job. Thus, it is easy to
believe that this tab and the arrangements could only have handled by the KGB, which
during that epoch limited no expenses in its attempts to recruit promising American
students in Europe.

Clinton has also never accounted for the 11 days spent in Moscow before the actual
meeting of the War Moratorium and has never revealed who paid his expenses or what

he did or who he met with during that time. However, for a tourist visiting Red Square in Moscow, a trip to Lenin's Tomb is usually on the itinerary. For a visiting leftist, such a visit is as requisite as a Moslem's visit to the Kabah while in Mecca. Standing before the mummy of the High Priest of Communism and Atheism on Christmas Day, for a communist, had long represented a symbolic, ritual act of contempt and abnegation of all the religious, spiritual, and ethical values which most Americans cherish.

Even more telling was Clinton's January 4 return trip from Moscow on another Aeroflot jet. The flight terminated in Prague, then the capital of the Czechoslovakian Soviet Socialist Republic (CSSR). There, Clinton was a guest of Jan Kopold's father, Bedrich Kopold and Jan's maternal grandmother Maria Svermova, who was the original founder of the Czech Communist Party in the 1930s. During his visit, she took a liking to young Bill; they walked and talked. Svermova's deceased husband was the original editor of Rude Pravo, the Czech Communist Party paper before the War.

After the Soviet-backed Communist coup of Czechoslovakia in February 1948 had disposed of Democratic President Jan Masaryk by tossing him out a window of the Foreign Ministry, Rudolf Saltzman, a.k.a. Slansky, became the new president. Karel Svab, Maria's brother, was appointed Commissar of Secret Police and was responsible for the subsequent murders, tortures, and deportations to Russian gulags of several hundred thousand Christians, democracy advocates, anti-Communists, and even religious Jews who had survived the Holocaust. Under the Saltzman/Slansky regime (1949-1952), Maria Svermova was Secretary of the Communist Party and the Central Committee, the supreme ruling body. While the majority of Jews in pre-war Czechoslavakia were anti-Communist, the Party itself was dominated by a clique of apostate Jews who had long since abandoned the principles of their religion to embrace the False God of Marxism.

The entire Kopold clan was a significant part of the ruling Communist party elite and was responsible for those murders and deportations either by the act or as formulators of policy. In fact, 11 out of 12 Politburo leaders of the Czech Communist Party were

apostate Jews who had taken refuge in Moscow just prior to the German occupation of
the Czech rump state in 1939. It was easy for the Communists to seize control in 1948
without popular resistance because the Germans had confiscated all private weapons
during the War.

In 1948, Saltzman/Slansky smuggled guns and explosives to Palestine to arm the Zionist
organizations, the Haganah, the Stern Gang, and the Irgun to enable them to keep killing
British officials until Britain became fed up and pulled out. In 1949 these gangs

organized the ethnic cleansing of over one million Palestinian Arabs from their lands
which were then confiscated and made an integral part of the nascent State of Israel.
President Saltzman/Slansky in turn paid with his life for assisting the Zionists. Accused
of harboring Jewish nationalist sentiments, which were in opposition to Marxist
internationalism, Stalin sent him to the gallows in 1952.

Years later, when Clinton was President, he again flew to Moscow, this time on Air Force
One, to meet Boris Yeltsin. Then, on his return flight he had the plane stop in Prague,
where, besides playing the saxophone -- important stuff -- he went to visit the parents of
his Oxford friend Jan Kopold. By then, Maria Svermova had died of old age. As for Jan
Kopold, he had been killed earlier in an "accidental fall" in Turkey in 1970, becoming
perhaps the first of a long string of former Clinton friends and associates to meet an
untimely end. Interestingly, Clinton told the news media people accompanying him on
the Prague pitstop that the Kopolds were "old friends he had long admired." Nothing
appeared in the press, however, about Clinton's admiration for and association with this
family once such an intimate part of the ruling echelon of the murderous criminal Soviet
puppet government that had enslaved Czechoslovakia.

After Clinton's short-lived tenure at Oxford -- he never finished his second semester there
-- he remained a member of The Mobilization Committee, a Communist-front
organization dedicated to undermining the strength of the United States and opposing
American initiatives against the communist world movement, for another three years.

Clinton's youthful affiliations explain many of his recent actions. Why, for example, the International Socialists were able to hold their annual conclave in February 1995, as guests of Papa-Marx Aristide at Haiti's National Palace in Port-au-Prince after Clinton restored the volatile voodoo priest to power. This explains why I stood in dismay

observing a huge banner in front of the Palace proclaiming that event, while non-comprehending U.S. soldiers stood guard outside protecting it and the delegates inside, those very persons sworn to destroy everything most Americans revere.

This explains why Communist Chinese agents could obtain sensitive positions within the Federal Goverment without having to obtain requisite security background checks. This explains how they could steal all our nuclear secrets -- and God knows what else -- and walk away with impunity, without a peep or protestation from the White House.

This explains why we are backing the Kosovo Liberation Army -- a terrorist gang of drug-financed Marxist thugs -- and why we are attempting to bomb into submission the socialistic but nationalistic nation which opposes them.

Yes, this explains a lot of things about Bill Clinton. Clinton has been a left-wing sympathizer all his life and has appointed openly pro-Communists to his administration, has promoted one Socialist measure after another in the U.S. Congress, has implemented policies calculated to subvert and weaken both the moral and physical defenses of the United States while doing everything possible to wreck the predominant cultural heritage of this nation.

More recently, Clinton is attempting to exploit the shooting tragedy in Colorado to further his party's goal and insidious agenda of incrementally disarming all Americans and so potentially leaving them vulnerable to a maximalist New World Order government of a more insidious type then that which terrorized, murdered, and enslaved Czechoslovakia.

Rather than be cowed into submission with guilt by Clinton's recent anti-gun initiative -- cynical and insincere as it is -- playing upon the raw emotions of the events out West, I suggest Americans react en masse by doing the contrary! Buy weapons, stockpile ammunition -- secure them against small children of course -- enroll in a gun safety course, practice at the range, and learn how to handle weapons responsibly. Above all, be

prepared!

When the U.S. Congress can no longer protect us from the likes of Bill Clinton, his
cohorts, and the type of people he so much admired in Prague. When the U.S. military is
finally dissolved or becomes a tool of domestic oppression -- there will only remain WE
THE PEOPLE to fall back upon ourselves to preserve the rights and freedoms won
through blood and sacrifice by the Founding Fathers.

Will we have the courage to do so when the time comes? That's the question which
remains. Enough is enough! In a free society, free citizens have always owned arms,
while a disarmed citizenry consists of subjects and slaves! Perhaps, in a pre-emptive
move, it's time for millions and millions of angry Americans to converge upon
Washington and raise our voices in unison to Bill Clinton and shout: "NO, NO, NO, NOT
HO, HO, HO."

Joel Ruth is a historian who has lived, traveled, or worked in 50 countries and frequently
writes about national and international affairs. He was in Czechoslovakia in August 1968
during the Soviet Invasion. He participated in anti-Soviet student demonstrations, was
fired upon, and assisted in the theft, sabotage, and destruction of Soviet military
equipment. Tagged "an enemy of the State," he was ordered by Soviet security personnel
to leave the country or face immediate arrest. Reach him by email at

This is not a comment on this particular item for sale, but a general question.

Our local PD recently started using speech inversion. These decoders (as well as software) seem to be readily available.

I assume that they are entirely legal. After all, it's a simple modulation, not much different from any other conversion that goes on inside a scanner.

But, technology notwithstanding, does anyone know of any federal or local (New Jersey) laws that would prevent use of a speech inversion descrambler?

Thanks

Susan,

The federal law is Title 18, US Code, Section 2510(16). This section provides that a radio communication is "readily accessible to the general public," and therefore is not protected from unauthorized interception, unless the communication falls within one of five categories. 18 USCS 2510(16)(A) provides that "scrambled" or "encrypted" radio communications are not "readily accessible" and therefore are protected. Speech inversion is considered "scrambled" and is therefore protected. The key point is that by adding speech inversion, the police are stating their intent and making an effort to protect the communication. As a side note, digitizing the signal for spectrum efficiency is not protected, however encrypting the signal (again, an act intended to protect it) is protected.

Hope this helps.

Mike (KD4LLA)

For the people who like peace and quiet: a phoneless cord <grin>!

The longer Bill Clinton stays in office, the more we pay.

Our justice system pays because he has opened the door for millions of us to play games with the notion of telling "the whole truth" under oath. Our military personnel pay because they have to carry out their duties while grappling with questions regarding the motives of their commander in chief. Our national intellect pays because, with his myriad verbal contortions and willful deceptions, the president has become little more than a walking, talking insult to our intelligence. Finally, the taxpayers pay because, in his efforts to keep "looking presidential" and "doing the work of the people," he is creating more new programs and growing the government.

Haven't we paid enough already?

See my web page at http://www.alaska.net/~mdickman/Index.htm

Yes, it is against the law to receive a scrambled transmission no matter how it is scrambled. These devices are not illegal to sell because they have legitimate uses. For example you could put a scrambler/descrambler on your telephone to encrypt communications between you and another party with the same equipment. Many states have their own laws regarding interception of scrambled communications, but there is a federal law that prohibits it as well. You are correct that frequency inversion is simple to monitor. I wouldn't spend money on a special decoder however when you can download software for free over the Internet that will use your sound card to do the same thing.

Gene,

Happy to help. Butler County operates on a county wide dispatch system. All 9-1-1 calls are dispatched via the county dispatch center.

The area of North Washington does not have it's own police department, therefore the PA State Police answer all calls in that area. The county only dispatches the fire department.

Butler County primary dispatch freqs:

PD 154.815 - primary
154.980 - ch. 2

Fire 33.82 - primary
33.88 - ch. 2

Medical 155.220 - primary
155.340 - national

PSP out of Butler Barricks 154.665 - base
158.910 - cars

There are also several web site available for W. PA.:

http://www.li.net/~j4dice/frequencies/Pennsylvania/butler.html#LOCAL

Any dish will help you pull in frequencies at 400mhz and above!
The larger the dish, the greater the gain!

Wait a minute! This is true only if you use the electronics of the dish.
The best method is to simply use the dish as an antenna, and do not use the feedhorn, or the decoder box.
The dish can be used along with any small antenna placed at the focal point of the dish so that the dish feeds the signal to the smaller antenna that is connected to your scanner.
REMEMBER! Keep your cable lengths to a minimum since unless you're using very high dollar hard cable, the higher the frequency, the more loss youll have out of the cable no matter what antenna you are using.

Either way, but if there's expected to be a lot of MDT traffic, usually they
put it on a separate system/channel.

>could be scanned, despite Panasonic's advertising claims. Maybe they fixed
>it?

Consumer Reports tested one of the Gigarange phones in their March 1999 issue. They didn't get any better range out of it than a 900 MHz DSS phone. And they said they had no problem picking it up with a scanner.

I emailed Panasonic and got what appears to be a canned reply. What they describe doesn't sound to *me* like Direct Sequence Spread Spectrum. My understanding is that in true DSSS the sound is digitized and the transmission frequency is based on the value of each sample. Maybe someone who's a little more up on the technology could comment.

The FCC approval for this phone does describe the handset as a digital spread spectrum device, so that's what Panasonic represented it as to them.

Here's the reply from Panasonic:

While our KX-TGxxx Gigarange units provides substantially more security than our previous models and protects against accidental eavesdropping by other conventional home products, no system is totally secure and eventually can be compromised. For that reason, virtually all manufacturers recommend that highly confidential information, such as PIN numbers, credit card numbers, and Social Security numbers should never be entered or spoken into a cordless phone.
While security is one element of cordless phone design, it is not the only one, and we believe Gigarange telephones provide users with unparalleled range and sound clarity.
KX-TG Series operate using a Direct Sequence Spread Spectrum method; what that means is that the frequency changes all the time. The GigaRange models also use a digital PN coding generator to select one of four channel blocks. For example, when the unit is using PN code 1, the handset transmitter is spread through the following frequencies: 909.640,911.080, 912.520, 913.960, 915.400, 916.840, 918.280 and 919.720 MHz. If you use the "Channel" button on the handset, you select a different PN code which then spreads the transmitted output through a different group of block frequencies.These units operating frequency is between 909.640 MHz ~ 920.800 MHz and between 2481.080 MHz ~ 2481.440 MHz. Conventional cordless telephones use a defined set of frequencies, one channel for transmitting and another one for receiving. With GigaRange, transmit and receive frequency bands are different and occur simultaneously. By combining

frequencies, and transmitting via direct sequence Spread Spectrum Technology (SST), the Gigarange will out-perform any cordless phone available to the consumer. Gigarange transmissions take place where the frequency range is clean, and clear of any obtrusive interference.

Primestar has been know to abandon dishes when a contract
is terminated--the cost of sending a technican out to remove a dish
in a rural area often greatly exceeds the value of the
receiver/downconverter.

Given the small dimensions of the dish; it's only practical use is in the
microwave region---well above the tuning range of any scanner on today's
market.

Yes Herr klinton is a freighting man. Let us pray that after his term of office is up he leaves and doesn't pull a coup to stay in power. I don't know why so many American's give klinton a free pass. If you or I were accused of rape we would be destroyed both publicly and financially. With klinton, he walks away Scott free.
Let Freedom Ring, God Bless America my brothers and sisters.

Tracey wrote in message <372B2806.75BBCB3D@hotbot.com>...
Check out this article on Clinton's commie past. Then you'll know why he wants to take everything away from you and place all power in the hands of the Executive Branch.

Clinton's frightening communist past

World net daily
May 1, 1999 Ruth

FRIDAY APRIL 30 1999

Clinton's Czech-communist connection

-------- By Joel A. Ruth © 1999

WorldNetDaily.com Psssst!! Don't tell anyone. ... Future U.S. President paid homage to Lenin's Mummy
during Christmas. ... Youthful Associations account for present predilections. ... Better start arming
yourselves and hiding your weapons. ... It was five days before Christmas, 1969. A time of year when
Americans are busy converging on family, celebrating Chanukah, offering prayers of thanksgiving, out
caroling, trimming trees, or, as Christians, preparing to rejoice in the birth of their Savior. But while most
Americans were wrapping gifts and worshipping before God, the future President of the United States
was standing in silent tribute and awe before the mummy of Vladimir Lenin. How did this happen?

On
December 19, 1969, Bill Clinton had boarded an Aeroflot flight from London for the USSR to Moscow,
the center of world atheism and the capital of the Soviet-Marxist state. William Jefferson Clinton's
pilgrimage to the Soviet Union was the climax of a busy fall semester as a "Rhodes Scholar" at Oxford. It
should perhaps be mentioned to those impressed by such presumed status that Rhodes Scholarships are
granted to individuals passing ideological muster whose sentiments during the interview

process are
reflective of acceptable left-wing views to the selection committees, and not because of good grades.
Once in England, Clinton lived up the expectations of his promoters and joined the British Peace Council,
which was established by the British Communist Party. Quickly, Clinton helped the council organize other
expatriate Americans and draft-dodgers for anti-war demonstrations on October 15, 1969 and again on
November 16, 1969 in front of the U.S. Embassy in London.

The British press, at that time, reported that
the protestors chanted, "Ho, Ho, Ho," and "Ho-Chi Minh, Viet Cong is gonna win." Shortly after that,
Clinton joined with other pro-communist and anti-American protestors on a trip to Norway to demonstrate in opposition to that Nation's desire to join NATO. Activities as Clinton's were not at all out
of character for Oxford students during that period and it has been estimated that even today, upwards of
60 percent of all Oxford professors hold moderate to extreme Socialist views. For such, the University
had long been the home recruiting ground of the international communist movement. Its successes were
exemplified by their recruitment of some of Bill Clinton's fellow alumni, notably the traitors Kim Philby and
Donald McClean.

While Bill Clinton has never explained who paid for his trip to Moscow, he was
accompanied by a friend and fellow Oxford student, Czech Jan Kopold. They were to attend a meeting of
the War Moratorium Committee to be held January 2, 1970. Upon arrival, Clinton did not check into a
youth hostel, but rather stayed at the Hotel National, the most exclusive and expensive one in Moscow of
that time -- a ritzy place usually reserved for foreign ambassadors and high-level Communist Party
apparatchiks. In today's terms, that trip would probably cost several thousand dollars. Clinton only had his
tiny $275 Rhodes stipend to live on and never held a job. Thus, it is easy to believe that this tab and the
arrangements could only have handled by the KGB, which during that epoch limited no expenses in its
attempts to recruit promising American students in Europe. Clinton has also never accounted for the 11
days spent in Moscow before the actual meeting of the War Moratorium and has never revealed who paid
his expenses or what he did or who he met with during that time. However, for a tourist visiting Red
Square in Moscow, a trip to Lenin's Tomb is usually on the itinerary.

For a visiting leftist, such a visit is as
requisite as a Moslem's visit to the Kabah while in Mecca. Standing before the mummy of the

High Priest
of Communism and Atheism on Christmas Day, for a communist, had long represented a symbolic, ritual
act of contempt and abnegation of all the religious, spiritual, and ethical values which most Americans
cherish. Even more telling was Clinton's January 4 return trip from Moscow on another Aeroflot jet. The
flight terminated in Prague, then the capital of the Czechoslovakian Soviet Socialist Republic (CSSR).
There, Clinton was a guest of Jan Kopold's father, Bedrich Kopold and Jan's maternal grandmother
Maria Svermova, who was the original founder of the Czech Communist Party in the 1930s. During his
visit, she took a liking to young Bill; they walked and talked. Svermova's deceased husband was the
original editor of Rude Pravo, the Czech Communist Party paper before the War. After the Soviet-backed Communist coup of Czechoslovakia in February 1948 had disposed of Democratic President Jan Masaryk by tossing him out a window of the Foreign Ministry, Rudolf Saltzman, a.k.a.
Slansky, became the new president. Karel Svab, Maria's brother, was appointed Commissar of Secret
Police and was responsible for the subsequent murders, tortures, and deportations to Russian gulags of
several hundred thousand Christians, democracy advocates, anti-Communists, and even religious Jews
who had survived the Holocaust.

Under the Saltzman/Slansky regime (1949-1952), Maria Svermova was
Secretary of the Communist Party and the Central Committee, the supreme ruling body. While the
majority of Jews in pre-war Czechoslavakia were anti-Communist, the Party itself was dominated by a
clique of apostate Jews who had long since abandoned the principles of their religion to embrace the False
God of Marxism. The entire Kopold clan was a significant part of the ruling Communist party elite and
was responsible for those murders and deportations either by the act or as formulators of policy. In fact,
11 out of 12 Politburo leaders of the Czech Communist Party were apostate Jews who had taken refuge
in Moscow just prior to the German occupation of the Czech rump state in 1939. It was easy for the
Communists to seize control in 1948 without popular resistance because the Germans had confiscated all
private weapons during the War. In 1948, Saltzman/Slansky smuggled guns and explosives to Palestine to
arm the Zionist organizations, the Haganah, the Stern Gang, and the Irgun to enable them to keep killing
British officials until Britain became fed up and pulled out. In 1949 these gangs organized the ethnic
cleansing of over one million Palestinian Arabs from their lands which were then

confiscated and made an
integral part of the nascent State of Israel. President Saltzman/Slansky in turn paid with his life for assisting
the Zionists.

Accused of harboring Jewish nationalist sentiments, which were in opposition to Marxist internationalism, Stalin sent him to the gallows in 1952. Years later, when Clinton was President, he again
flew to Moscow, this time on Air Force One, to meet Boris Yeltsin. Then, on his return flight he had the
plane stop in Prague, where, besides playing the saxophone -- important stuff -- he went to visit the
parents of his Oxford friend Jan Kopold. By then, Maria Svermova had died of old age. As for Jan
Kopold, he had been killed earlier in an "accidental fall" in Turkey in 1970, becoming perhaps the first of a
long string of former Clinton friends and associates to meet an untimely end. Interestingly, Clinton told the
news media people accompanying him on the Prague pitstop that the Kopolds were "old friends he had
long admired." Nothing appeared in the press, however, about Clinton's admiration for and association
with this family once such an intimate part of the ruling echelon of the murderous criminal Soviet puppet
government that had enslaved Czechoslovakia.

After Clinton's short-lived tenure at Oxford -- he never
finished his second semester there -- he remained a member of The Mobilization Committee, a Communist-front organization dedicated to undermining the strength of the United States and opposing
American initiatives against the communist world movement, for another three years. Clinton's youthful
affiliations explain many of his recent actions. Why, for example, the International Socialists were able to
hold their annual conclave in February 1995, as guests of Papa-Marx Aristide at Haiti's National Palace in
Port-au-Prince after Clinton restored the volatile voodoo priest to power. This explains why I stood in
dismay observing a huge banner in front of the Palace proclaiming that event, while non-comprehending
U.S. soldiers stood guard outside protecting it and the delegates inside, those very persons sworn to
destroy everything most Americans revere. This explains why Communist Chinese agents could obtain
sensitive positions within the Federal Goverment without having to obtain requisite security background
checks. This explains how they could steal all our nuclear secrets -- and God knows what else -- and
walk away with impunity, without a peep or protestation from the White House. This explains why we are
backing the Kosovo Liberation Army -- a terrorist gang of drug-financed Marxist thugs -- and why we

are attempting to bomb into submission the socialistic but nationalistic nation which opposes them. Yes,
this explains a lot of things about Bill Clinton. Clinton has been a left-wing sympathizer all his life and has
appointed openly pro-Communists to his administration, has promoted one Socialist measure after another
in the U.S. Congress, has implemented policies calculated to subvert and weaken both the moral and
physical defenses of the United States while doing everything possible to wreck the predominant cultural
heritage of this nation. More recently, Clinton is attempting to exploit the shooting tragedy in Colorado to
further his party's goal and insidious agenda of incrementally disarming all Americans and so potentially
leaving them vulnerable to a maximalist New World Order government of a more insidious type then that
which terrorized, murdered, and enslaved Czechoslovakia. Rather than be cowed into submission with
guilt by Clinton's recent anti-gun initiative -- cynical and insincere as it is -- playing upon the raw emotions
of the events out West, I suggest Americans react en masse by doing the contrary! Buy weapons,
stockpile ammunition -- secure them against small children of course -- enroll in a gun safety course,
practice at the range, and learn how to handle weapons responsibly. Above all, be prepared! When the
U.S. Congress can no longer protect us from the likes of Bill Clinton, his cohorts, and the type of people
he so much admired in Prague.

When the U.S. military is finally dissolved or becomes a tool of domestic
oppression -- there will only remain WE THE PEOPLE to fall back upon ourselves to preserve the rights
and freedoms won through blood and sacrifice by the Founding Fathers. Will we have the courage to do
so when the time comes? That's the question which remains. Enough is enough! In a free society, free
citizens have always owned arms, while a disarmed citizenry consists of subjects and slaves! Perhaps, in a
pre-emptive move, it's time for millions and millions of angry Americans to converge upon Washington and
raise our voices in unison to Bill Clinton and shout: "NO, NO, NO, NOT YOU HO, HO, HO."

Here's something you might be curious to know:

Every time you enter the name of a prominant government
official onto the net...a super-computer at the National
Security Agency documents the time, location & message.
It's then evaluated for security threat. Most are
ignored as general messages...but a few are passed onto
the FBI for investigation. I'm totally serious.

41. Re: Why Is Government Trying To Ban Technology?

Because instead of moving with the times, they want to outlaw the public moving forward while their technology stays stagnate.
This way, no one has to spend any money or make any more effort.
This is in reverse of the way it should be, being that the government moves ahead, then the public
catches up.
Instead, it's all out opression to keep from having to do anything.

The earlier posts may have covered the technical side of system operation, but in direct answer to your question about repeaters and autopatches: You see those poles or towers, or just about anything else scattered all over the countryside with the triangular antenna mounts on them? Well, at the base of those poles, there is a whole building full of repeaters, 222 channels, I think, and just as many autopatches. No, 222 sounds too high. However many cell channels there are divided by six. Then start all over with 900 MHz PCS, then 1800 Mhz PCS, then, whatever they call the 1900 MHz stuff. All the latter are fully digital, of course. But each channel has a "repeater" equivalent and an autopatch equivalent. Some of the interconnection is trunked by microwave to a central office.

From: "L.Mitchell" <L.Mitchell@currantbun.com>
Message-ID: <372cc6da.0@news1>
Source record: 120091

Does anyone know the solution to the following faults on a PRO-50:

1. LCD display goes dim and eventually dissapears after a few minutes of use,
2. The scanner still recieves when it is like this, but after another few minutes it goes complety dead wiping the stored frequencys in the process.

I thought that the .047F 5.5V capacitor (C246) was faulty as it provides the power to store the memory so it was replaced with a similar capacitor rated at 3.5V, (I was unable to find a 5.5V one) This has not fixed the fault. (Batteries which are in use are fresh ones)

Does anyone out there know anything about these faults any information would be useful.

Thanks

> get the knack of it.

Nonsese, you're just not approaching the code properly and with enough
determination. If you ever sang a song (not necessarily in tune) you CAN
learn the code.

My dad went up to Montreal to enlist in 1939. The Canadian Army put all its
volunteers through aptitude tests to determine what their specialized
training would be. My father, who was an amateur pianist and a drummer
from the West Indies were the only two chosen from a large group of
soldiers to be trained as PROFESSIONAL telegraphers. My point is that
you must have a sense of rythm to learn Morse. My other point is that few
if any people have neveer sung a song or listened to some kind of music.
Everyone has some rhythmic sense. Here's an example of what I mean:

All sorts of people have learned enough Morse code to pass code tests;
it's only a matter of method, practice and patience. As I recall, once you
had a receiver, it was only a matter of memorizing the code patterns from a
printed chart and spending twenty minutes per night, four nights a week
listening to W1AW's code practice sessions at 5 and 7.5 words per minute,
to learn enough code to pass a code test before an FCC examiner (this was
the 1950s).

Today, there are freeware/shareware programs with settable code speeds
starting as slow as you'd like them to. The only thing standing between
anyone who can read English, Braille or whatever, and reading code at
5 words per minute is determination and an investment of time. You may
resent having to learn code, but if you want to learn the code, you'll learn
the code. Any body (in less politically correct times we used to say
"Any body's little sister") can learn the code. It just ain't that hard.

Here is the subset of INTERNATIONAL MORSE CODE that were
commonly used in ham radio, when I learned them in the early 1950s.
Please keep in mind that _ and . are only convenient abbreviations.

- always should be thought of as dah

. should be thought of as di, except at the end of a character

. should be thought of as dit, at the end of a character

For example: A = didah N = dahdit B = dahdididit

A . _ N _ .

B _ . . . O _ _ _

C _ . _ . P . _ _ .

D _ . . Q _ _ . _

E . R . _ .

F . . _ . S . . .

G _ _ . T _

<hyphen> _ . . . _

<wait> . _ . . .

<error> . . . . . .

? . . _ _ . .

/ _ . . _ .

<end of transmission> . _ . _ .

++

Keep in mind that a dah is three times as long as a dit.

The time between successive elements (i.e. dits or dahs) of the
same character is equal to one dit's time. As I remember it (this
one you'd better check), the time between two successive characters
equal to three dits' time.

It'll go easier study if the characters are memorized in mnemonic
groups, according to their sounds.

All dits all dahs
======== ========

E . T _

I've had one for several months and over-all like it. It has a lot of capability in a small package. Lots of features all reasonable to use. You will find a better scanner and a better HF receiver but the DJx10 performs well in all areas. If I could improve a couple of areas I would decrease current used to allow the batteries to last longer, I would improve selectivity ... it's a little broad ... and I would reduce it's tendency to overload. None of these drawbacks are major. Overall a good little radio.

Amtrack has its own website which lists all the frequencies listed and even
catagorizes them by routes throughout the country. Very open and honest,
don't even have to look for them they post them for the world to see.

> What frequency does it transmit on anyway?

Same channels as regular analog TV. Less bandwidth needed, all digital. Most big cities have already had the DTV assignments made, some stay on VHF, and others have or will be moving to UHF. Our NBC affiliate here presently is broadcasting in both formats. You'll need one of those big bucks receivers to see anything, though.

Just about 97% of them.

> You may consider learning the code a waste of time (yours) BUT, if it
> is required to obtain the license you still need it, like it or not.

Obviously. No one here made an argument about code not being a
requirement. If you were paying attention, people here are suggesting
that it not be made a requirement any longer.

> You may never parallel park a car in your lifetime (in 35 years of driving
> I never have), soooo, should it be eliminated from the driving test?

No, that would similar to horizontal and vertical polarization of
antennas on the Ham exam. But there should not be a test of how to
attach skis to the roof of your car, if you want to have a correct
analogy.

> Most of your frivilous analogies fail to hold any water.

Because you don't understand what is being said, and translate the
analogies incorrectly.

Blacks loved that answer back in the slave days, Women loved that answer back in the days when they were not allowed to vote, Hams loved that answer back in the 90's when code was a requirement to use HF.

> course. Better to stick with the Lemming pack.

When they pass a law that says you have to jump off a cliff, I suppose
you will go along with that too.

A legal speed limit is only a meaningless number pulled out of a hat by
some polititian. When they can't get enough people to speed over that
number, they continue to lower that limit until they can generate the
wanted revenue. Police cars always HIDE out of site to catch speeders
because if they were visable, people would not speed past them and they
could not fine them. This is not a matter of saftey, or the police
would not hide, but be visable so that people would see them and not
speed. Can't make much money that way on tickets.

No, why stop there, why not find 600 more skills that you never intend to use and learn them. People take the time to learn what they NEED to know or WANT to know. Why learn Russian if you never intend to go to Russia or ever speak Russian?

You don't understand. Perhaps he wants to be a Ham that can talk on HF
frequencies and never use Morse Code. There are a lot of us like that
that are licensed hams now.

If someone doesn't want to use packet, but wants to just use Morse Code,
does that mean THAT person really doesn't want to be a ham too?

Just a little note to all Canadian radio hobbiests.
Industry Canada is considering allowing USA Family Radio service in
Canada.
See Industry Canada web page.

http://strategis.ic.gc.ca/SSG/sf01740e.html for details.

I hope we follow suite with the US, as I know that US FRS equipment
is being sold or used here in Canada illegally.

87. New B.C. WARS freqs

Has anyone in the greater Vancouver BC area been listening to the new
B.C. Wide Area Radio system tests on 866.xxx mhz?

Ericsson and BMS Communications is installing the new 800.mhz system,
with one transmitter/receiveral already atop of the Scotia Bank tower at
Georgia and Seymour St.
The following freqs have been monitored:
866.0875
866.1375
866.3375
866.3875
866.5875 --- data stream
866.8375
866.8875
867.0875
867.1375
The new system is to be up and running by June99?
Has anyone heard any voice tests? or are we doomed with total digital
EDACS on these
freqs that are to be used by the police/fire & ambulance services.
please post reply to news group or email me

jmacneil@direct.ca

I'm happy to see that you've cleaned up the mistake-filled,
incomprehensible signature line, Mark. This new mistake-filled version
is much easier to understand.

Using an untold number of billions of dollars worth of other people's equipment, along with millions of miles of phone lines.

>Those who are not "lazy and stupid" go through learning all
>the electronics and regulations that you have to learn to get a ham licence.

True. And we use only our own equipment (which many of us have built ourselves).

PA. TURNPIKE UNITS
150-series are Ambulances 200-series are tow trucks
300-series are State Police 2000-series are highway maintenace

Police & Maint/Work Crews use same channels on.
PSP Troop T handles patrols on the turnpike. ALL Troop T dispatch
is done from Harrisburg. System is linked via microwave.

Pennsylvania Attorney General's Office

154.950 (F-1) -Drug Enforcement Mobile-to Mobile
155.445R/XXX.XXX (F-2) -Drug Enforcement Dispatch
155.490 (F-3) -Drug Enforcement Regional (CLEAN)
156.090 (F-4) -Drug Enforcement Special Operations
460.200/465.200 179.9 Department of Justice North Repeaters (F1)
460.475/465.475 179.9 Department of Justice South Repeaters (F2)

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.425 PEMA Rain Gauges
169.500 PEMA Rain Gauges
169.525 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges
171.125 PEMA Rain Gauges
171.850 PEMA Rain Gauges
171.875 PEMA Rain Gauges
412.625 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

Pennsylvania Department of Transportation (PennDOT)

PennDOT used an old half-duplex (base/mobile) system similar to PSP, but
recently acquired several new frequencies and seems to be using simplex on
them. The list below represents all frequencies assigned to PennDOT.

47.040
47.060
47.080
47.140
47.160
47.180
47.200

What you hear through the speaker is pretty routine, but it's a fun catch anyway, and sometimes you get a surprise. Bob Grove can't resist turning on the scanner when he passes a fast-food chain.

FAST FOOD SMORGASBORD
By Bob Grove

"Welcome to McDonald's. May I take your order?" How many thousands of times every day is this friendly greeting parroted across the country? And how many scanner enthusiasts tune in 154.600 and 35.02 MHz as they drive past interchanges on our nation's highway system?

But the big arches are not the only architecture to house friendly fast-food frequencies. Just about every chain with a drive-by kiosk has two-way intercommunications with its customers, using frequencies in low band, high band, UHF, and even 900 MHz.

While the belt-worn transceivers are low power, the fixed repeater can usually be heard for a half mile or more. A local McDonald's restaurant uses a Panasonic system known as the "Order Taker," a likely name, indeed. A nearby Hardees' system is made by H.M Electronics. While the radios are usually sub-audibly tone encoded to avoid interference (see Table 4); some cases of intentional interference have led to substantial fines and suspension of FCC licenses when hams have abused their radio privileges.

Some unintentional interferences have proved amusing. A church reportedly installed a wireless public address system on the same frequency as an adjoining fast-food restaurant. As the minister raised his eyes skyward and requested divine guidance, his parishioners heard the electronic reply: "Cheeseburger, all the way, hold the mayo!"

Clerks frequently switch to internal intercom without realizing that, while the customers can't hear their comments, stalwart scanning enthusiasts can. Common fare includes discussions of dates, working conditions, other employees and their employers, and remarks about customers. When the scanner listener happens to be the customer, he reaps a particular delight in catching the employee off guard by responding to what was suposedly a private remark.

A short time ago we learned of one resourceful and highly unlawful prank pulled by a ham with a crossband-capable transceiver. Poised between two prominent fastfood restaurants, he tuned in the customer frequencies from one restaurant and retransmitted it to the competitive restaurants' order takers. Wendy's order takers were understandably miffed when they were getting orders for Big Macs, while McDonald's clerks were scratching their heads figuring out how to serve up a Frosty! It may seem like harmless fun, but don't do it!

This month MT takes a look at the vast, largely unrecognized spectrum shared by these harbingers of hamburgers. We owe a special debt of gratitude to Bob Eisner for sharing the largest and most-up-to-date list of fast food frequencies ever published.

The list was last updated in JULY 1997.

TABLE 1

In the US there are three brands of Wireless headsets for Drive
Thru Restaurants.

Panasonic - Operates in the UHF band (450 - 470 Mhz range)
HM Electronics - Operates in the VHF-low/VHF-High Mhz range
3M - Operates in the ISM band (902 - 928 Mhz Wide FM)

Any idea on who manufactures that headsets that you've seen?

Hi
Im trying to listen to the following:
Police
Doctors
Ambulance
Hospitals
Reading
Microlights

I have the police for swindon and know most of the national freqs from uk scanning directory but need local if somebody could give them to me?
Thanks

Try Radio Shack's Unlimited catolog. They run about $4.99. A friend was restoring an old crystal radio, and found those three xtals in it. In my area, 155.550 is Sheriff's Office, 155.445 is County MRD, and I can't remember what 155.490 is, but it is in the public safety group.

BULLSHIT BARRY..... you need a new pair of glasses and ears if you really believe this. Sorry to come off so strongly but this is just total garbage if you really mean what you are saying. One look and you know they are not the same, not to mention the performance levels. I had one on an antenna at the West Coast with all of the storms over the years for 10 years, 40ft up guyed and it hasn't budged and inch. I still maintain you can spend what you will and not beat it. Forget that Grove piece of shit.

That is alot, just to make a phone call. Ain;'t nothing like them land
line calls. Plain and simple

emoney250@aol.com (Emoney250) asked:
> Anyone have the motorola "Talkabout" radio frequencies?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

FRS - Family Radio Service [95.627]

Ch Freq Ch Freq

1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125
4 462.6375 11 467.6375
5 462.6625 12 467.6625
6 462.6875 13 467.6875
7 462.7125 14 467.7125

The FRS was authorized on 06 June 96. It uses FM with a peak
deviation of +/- 2.5 kHz. Maximum power is 0.5w ERP.
Channels 1 - 7 are shared with GMRS.

119. Need 11.155 MHz. I.F. Crystal for scanner

Newsgroup: rec.radio.scanner

Anyone seen any of these anywhere? I kind of hate to have
International or JAN Crystal make one, for what they will charge.

Converting a Crystal Controlled RCA (one of my favorite scanners) from
low side injection (10.245) to high side injection (11.155) to get rid
of some local interference.

Thanks-Terry

Here, in the Cleveland Ohio area, there are Amtrak trains that uses the
Conrail drawbridge in the downtown/flats. Thus they have to make
contact with the bridge on the main Conrail frequency.

I'm always on the lookout for old scanners at estate and garage sales. When ever I do find them I get crystals at Radio Shack . Just make sure you tell them the brand and model of scanner, because it DOES make a difference. Also most Radio Shack stores in my area have a list of the local frequencies to help order the correct ones..

This is correct. However, Amtrak itself owns the NEC (Northeast Corridor)
from Washington to Boston, except fof a segment just north of New York
owned by a commuter agency. Amtrak owns a few other segments across
the country.

Around Raleigh, Amtrak uses the Norfolk Southern road channel, 160.950
(the old Southern Railway road channel) westbound toward Greensboro
and eastbound toward Selma. Amtrak uses one of the CSX road channels,
161.100 (the old SAL road channel) southbound toward Hamlet. The CSX
line through Fayetteville, Selma, Wilson, and Rocky Mount -- used by several
Amtrak trains -- has a different channel.

FRS is an unlicensed service, and there are almost no restrictions on
the
content of FRS communications. The FRS frequencies are:

Channel No..........(MHz) 14 channels @ .5 Watt

1.................. 462.5625
2.................. 462.5875
3.................. 462.6125
4.................. 462.6375
5.................. 462.6625
6.................. 462.6875
7.................. 462.7125

8.................. 467.5625
9.................. 467.5875
10................. 467.6125
11................. 467.6375
12................. 467.6625
13................. 467.6875
14................. 467.7125

135. the General Mobile Radio Service

Newsgroup: rec.radio.scanner
Date: 1999-05-02 00:00:00 UTC
From: Justin_Carson <JCarson@zyan.com>
Message-ID: <372C95BB.4A9A9D0C@zyan.com>
Source record: 120182
Cross-posted to: rec.radio.scanner,alt.radio.scanner

What is the General Mobile Radio Service?

The General Mobile Radio Service ("GMRS") is a personal radio service available to an individual (one man or one woman). It is a two-way voice communication service to facilitate the activities of the individual's immediate family members. Expect a communications range of five to twenty-five miles. You cannot make a telephone call with a GMRS unit.

Do I need a license?

Yes. Before any station transmits on any channel authorized in the GMRS from any point within or over the territorial limits of any area where radio services are regulated by the FCC, the responsible party must obtain a license for a GMRS system.

An individual 18 years of age or older, who is not a representative of a foreign government, is eligible to apply for a GMRS system license. Application for a GMRS system license is made on FCC Form 574.

A booklet entitled Instructions for Completion of FCC Form 574 is helpful
in preparing the application. There is a filing fee. For information on fees see our Fee Information page.

http://www.fcc.gov/wtb/csinfo/feeinfo.html

Which GMRS channels may I use?

There are twenty-three GMRS channels. None of the GMRS channels are assigned for the exclusive use of any system. License applicants and licensees must cooperate in the selection and use of the channels in order to make the most effective use of them and to reduce the possibility of interference.

Any mobile station or small base station in a GMRS system operating in the simplex mode may transmit voice type emissions with no more than 5 watts ERP on the following 462 MHz channels:

462.5625,
462.5875,
462.6125,
462.6375,
462.6625,
462.6875 and
462.7125 MHz. These channels are shared with the Family Radio Service.

Any mobile station in a GMRS system may transmit on the 467.675 MHz channel to communicate through a mobile relay station transmitting on the 462.675 MHz channel.

The communications must be for the purpose of soliciting or rendering assistance to a traveler, or for communicating in an emergency pertaining to the immediate safety of life or the immediate protection of property.

Each GMRS system license assigns one or two of eight possible channels or
channel pairs (one 462 MHz channel and one 467 MHz channel spaced 5 MHz apart), as requested by the applicant.

Applicants for GMRS system licenses are advised to investigate or monitor
in order to determine the best available channel(s) before making their selection. Each applicant must select the channel(s) or channel pair(s)for
the stations in the proposed system from the following list:

For a base station, mobile relay station, fixed station or mobile station:
462.550,
462.575,
462.600,
462.625,
462.650,
462.675,
462.700 and
462.725 MHz.

For a mobile station, control station or fixed station in a duplex system:
467.550,
467.575,
467.600,
467.625,
467.650,
467.675,
467.700 and
467.725 MHz.

Every GMRS system station operator must cooperate in sharing the assigned
channel with station operators in other GMRS systems by monitoring the channel before initiating transmissions, waiting until communications in progress are completed before initiating transmissions, engaging in only permissible communications and limiting transmissions to the minimum practical transmission time.

http://www.fcc.gov/wtb/prs/genmbl.html

Bill and Cindy were arrested, booked and released. They never spent any
time in jail, other than the length of time it took to process the paperwork.
The last I heard from him they were going to have to travel to New York for a
preliminary court appearance and to meet with the U.S. Public Defenders Office
attorneys in New York.
Just remember folks, this is your tax money at work, both prosecuting him,
and defending him. Frankly, I can think of better ways the government could
spend my money than by harrassing somebody like Bill. I mean, I haven't heard
that the drug problem has been cured, have you?

This would mostly depend on the monitary constraints of any given department or agency. Some departments have dedicated voice and data (MDTs) channels, others don't. Radio channels can be shared with both voice and data. In my area, it seems most of the voice transmissions on a departments only channel are to discuss why the MDTs are not working, and patrol officers asking for verbal confimation of what was transmitted to them via the MDT.

They are EXACTLY THE SAME antenna!There is no difference between the
"original" and the "copy".I've had them in my hands,side by side.The only
thing wrong with this antenna is it's pretty flimsy,and won't last very
long outside in bad weather unless mods are done to it and it's coated
with a uerathane spray.

Hi There; can't help you with any mods but I have a Sanyo Battery pack in my AOR900 and it works fine. The part number is Sanyo CADNICA Model 5N-600AA, it is a 6volt, 600 mah battery pack. I went into Net Find for Sanyo Batteries and came up with several sources, one of which washttp://www.electritek.com/Catalog/Batteries/BattSanStd.html. I found a local dealer here in Sacramento California that carried them in stock. The company name is Cell Energy Incorporated in Sac # (916) 484-7974 or outside 1-800-321-0714. If you call them, tell them Bob, W6JRF recommended them, I need to buy some new BIG batteries for my motorhome and I could use all the help I can get <G>

Hi all.
Please help me with this. I have been surfing for these but don't seem to find any.

I will have a good friend (who is better at soldering than me) to do some nessesaruy mods to my scout 40 for better protection from overloading.

I know they are out there - but if You know a mod please mail me (and this group).

TIA

Stephan

Please tell me how the BC 235XLT is superior to the Pro-90. They are the same thing. True, the 235 comes with an extra battery pack and charger, but from all of the accounts I have read, the Pro-90 is the same thing, but with fixes to some bugs that were in the older 235, as I believe was mentioned in Monitoring Times.

Hello there all
I have a AOR2700 with CAT 232 interface to control via computer
I was playing around with it for a week or so and it work fine ,but
now i start having some problems.
When it hoket up to the computer it's scans very-very slow (i use
radio manager for software),but the software works fine and show
normal scanning operation,with no problem.
I try lot different settings but still no success,i thing i mestup
the bandplan when i try to upload some stuff.
Can anyone tell me what maybe happen or give me some advise ,and or
can someone give me the US bandplan SO I CAN TRY OUT ???(I DON'T HAVE
A BACKUP stupit me ehh)
Thank you very much in advance
Lukas

: 5. Does anyone really believe that CW is the real cause
: behind the decline of Amateur Radio?

The decline of Amateur Radio is due to largely the internet making HAM obsolete except for nostalgia sake (though
alot of HAM's who need to feel more important than they are, would argue).
The secondary reason that HAM has declined is due to a alot of old, narrow minded, biggoted farts who think
they are special and OWN the entire 160-80m range.
Fortunately, these people are old, smoke alot and have alot of ailments (probably from years of being exposed
to high wattage RF) so they will all be dead in a few years anyhow.
There are those who carry on the old fart disfunctional attitudes but they are fortunately (and for HAM's sake) outnumbered
by a majority of new free thinkers who not only want change but see the need for change before HAM becomes nothing
but a cute memory, joked about by grandkids while they are playing video games and sufing the net.

While I was getting annoyed with having my BC895 do such a stupid job
such as decoding a trunking stream, I decided to do something and find
the discriminator for my obslete PRO2048. Well, after working for a
while, I found it. The chip is directly above the (c) in the Uniden logo
on the board. (IC8) The chip says:
3043A
6132B
JRC
The pin with the output is pin 7, which is on the side with the dot on
the board and is the farthest from the dot. You can use the metal square
on the ground of the earphone as your ground.

Could someone who owns an Icom IC-R2 scanner please tell me how you access specific frequencies directly on this unit? Do you have to sequentially dial-it up withing a specific band, or is there a more direct method. Either way, do you consider this an inconvienance?

You can either dial it in with the tuning dial in VFO mode, or memorize the specific frequencies in a bank. Once you have worked with this little gem for a while, it is much like driving a Ferrari. It may not have automatic transmission, but is very high performance and more of a manual type of product. Well worth it as it hears what virtually no other scanner can due to it's superior sensitivity. The highest level of performance in an antenna would either be the Radio Shack 20-006 telescopic with a center coil (using a SMA to BNC adapter) or my new favorite for wide band listening from 100-1000mhz is the Watson 881.
Enjoy

Chipping Away at Our Privacy

Two recent events-one overt, one not-illustrate
just how easy it is to lose your PC privacy.

You've probably heard about Intel's plan to embed an
individual "processor serial number" (PSN) in each machine
running on a Pentium III (PIII) chip. T

The 96-bit ID can identify the user's PC to any software that knows how
to request it. Of course, there are legitimate and useful
purposes for this kind of identification:

Resource-tracking within an enterprise is one example.
Indeed, some workstation manufacturers already feature
similar functions. And while some apps use serial numbers for licensing,
other software uses hardware-based "dongles" ("keys" that attach to
a parallel or serial port) for the same purpose.

Trunked radio system for McDonalds??? Not likely.

There are three brands of headset radios that are currently in
use at various Fast Food Restaurants.

HM Electronics Operates in VHF-low/VHF-Hi band
Panasonic Operates in the UHF Band
3M Electronics Operates in the ISM Band (902-928)

The most common frequency pairs you should check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000 *
154.5700 --- 170.2450 *
154.6000 --- 171.1050 *
457.5375 --- 468.3875
457.5500 --- 467.7750 *
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125 *

If they're using the "3M" headsets then you should search
from 920-922 Mhz Wide FM for the Speaker frequency and from
903-905 Mhz Wide FM for the Headset frequency.

Have a look at the following URL for a complete list:

http://pages.prodigy.net/hounddog/fastfood.txt

Especially since P* has been bought out by Direct TV. Rumour hints P*
customers will be offered conversion to DSS (new dish & receiver) and
then P* reception will be turned off.

Hi Mark,

Forgive me if you've already tried this route, but it *is* possible for the volunteer examiner team to administer adaptive code tests for people with disabilities. I'm not sure if there are hard and fast guidelines for how "adaptive" the test can be. I believe that the examiners at the Handi-Ham radio camp in Malibu this winter sent the letters one at a time, allowing a certain number of seconds for the examinee to provide a response. (I was on the VE team but didn't take part in the code exams.) If I remember correctly, the time allowed was on the order of ten or fifteen seconds, and the exam was passed successfully with 25 consecutive correct answers; equivalent to one minute of solid copy if the exam had been given at 5 wpm.

We will be providing classroom code instruction and VE testing at the Minnesota Handi-Ham camp this August. If you have a chance to attend, it can be a really great experience. Details are available on the Handi-Ham page at http://www.mtn.org/handiham/

Northstar is paged out by REMCS in Newark on 155.295. After they are in the air they communicate on the NJSP trunked system with a ID of 000-13.

Sorry, that's incorrect. One MUST pass 5wpm to recieve ANY
HF license as the international regulations (the ITU treaty)
now stand. The code 'waivers' only apply to speeds above
5wpm.

Yes, the BC 895 is probably a better all around Trunk Tracking scanner than the 2066 and it CAN be a mobile (direct connection to vehicle's 12VDC just like 2066), but it is a bit large.

At about the same size as the 9000XLT and that series of cabinets, it might present some space problems for smaller vehicles.

I find the 2066 a not-so-bad scanner for the price and it is the right size. It will be your choice as to whether the large size of the 895 is worth the larger capacity, much larger buttons and improved performance.

Good post Mark. That's exactly one of the problems. The FCC suddenly
allowed MDs to make a judgement call on this with no guidelines. And
couple that with the fact that some experts claim that significant
portions
of the population has SOME degree of dyslexia. In most people it's as
simple as transposing two numbers. I never considered myself as
dyslexic, but I had one MD tell me I was because I constantly type 'teh'

instead of 'the'. So at what point does something that isn't even a minor
inconvienence become a disability? Not to knowledge, but when
applied to a program that 'test skill levels'?

It all comes back to CW, is it important or not? If it is, then it shouldn't
be waivered. Period. If it isn't, then what's the point of the test? At the
current time, the FCC has decided that 5wpm is important. And I strongly
suspect that very soon that will change. Whether it changes before
that 5wpm becomes the new defining point for all HAM privlidges is
the question.

191. KS/MO Column 05-99

Newsgroup: rec.radio.scanner
Date: 1999-05-03 00:00:00 UTC
From: andy <andyb@qni.com>
Message-ID: <372DC55E.B9DA0796@qni.com>
Source record: 120007

KS/MO Column 05-99

The following ranting and raving is entirely my personal opinion.

Bill Cheek is the man most responsible for furthering the scanning hobby, if you ask me. He realized the potential of the PRO-200X series of Radio Shack scanners, and developed a whole barrel full of modifications for them, as well as a very powerful scanner/computer interface. Bill writes a monthly column in Monitoring Times magazine, and publishes his own newsletter, which showcases his ideas. He obviously has a criminal mind. (Huh?)
Last month or so, the Feds arrested Bill for selling a simple "data slicer" which is used to turn data from the airwaves into something a computer can understand. The slicer is used with the Trunker program and MDT decoding software, but it has many amateur radio applications as well. Why Bill was singled out is beyond me, since there are countless other commercial sources for the same thing. It could be that "they" don't like the idea that "we" can decode digital data streams with about $25 of parts from Radio Shack, and picked on Mr. Cheek because all of "us" would hear about it (which we did) and back off.
Here is what puzzles me. Selling a data slicer isn't like selling a fully automatic weapon to a kid. I mean, it isn't the kind of thing that draws attention to itself. If I sold one to you on the street corner for $25 bucks, there isn't going to be a concerned citizen calling the cops on 911 about it. Soï¿½this kind of "bust" had to be researched by the Feds. There may have been a Motorola representative, or the head of Communications for a law enforcement agency, contact the Feds about scanner listeners being able to listen to their trunked system or MDTs using a slicer, but as far as I know, THERE IS NOTHING ILLEGAL ABOUT THAT!
However they became aware of it, it still remains that they had to scrounge around until they found a reason to set the sting into operation. (I can hear the music nowï¿½the same music used when Barney Fife strides authoritatively to the patrol car on the Andy Griffith show.) Why would they get so worked up about something like that? I wonder if the Feds were unaware of the many digital modes of transmissions that could be monitored, realized that they often use those modes, and felt that it MUST be illegal to listen to them. The conversation may have gone like this. "They can monitor our WHAT? You mean they can see what is on our MDTs? That isn't legalï¿½is it? You're kidding! No wayï¿½well, they SHOULDN'T be able to do that! That's secret stuff! Whadya mean all the scanner nuts out there do it?!?! We gotta stop that! I don't careï¿½figure out some way to put and end to it!"
I'm in law enforcement myself. If someone is breaking a law they need to get caught and punished. Period. I don't have much sympathy for

criminals. On the other hand, if someone is doing something that is legal, even though I may not like the idea of them doing it, I will stand up for their right to do so. There are times when I am at work when it would be nice if our radio were 100% secure. Some stuff just simply doesn't need to be broadcast to the public. BUTï¿½that ain't the case, so I defend your (and my) right to listen in whether it is analog or digital.
Bill Cheek must now defend himself against the Federal Government. They will spend as many of our dollars as they need to screw Bill into the ground. Like all of us, the entire population of the country doesn't fund him. I don't have piles of money to give to the "Bill Cheek Defense Fund," unlike many folks who gave to the "Bill Clinton Defense Fund" a few years back. I do have a few bucks here and there that are earmarked for the hobby, so I plan on buying what I can from Bill Cheek. What happens to Bill Cheek will trickle down and effect you, too.

There! I got that off my chest, so we can now get on with business. Sorry to get so long winded, but things like this frost my buns like standing in a 4-foot snow cone. Believe it or not, some of my fellow dispatchers think I'm opinionated, and try to avoid bringing up politics and social issues in conversation. The phrase they use is, "Don't get him started!"

Before we get going, I have a request. If you have any storm spotter/severe weather/Civil Defense/Emergency Management frequencies, please send them in and I'll sort them out and get them in the June Column. There will be plenty of severe weather to come, and they might be handy to have!

1. KCK/BPU talkgroup code for Emergency Management for Wyandotte County.
2. Lees Summit info.
3. Weird fed freq intercept
4. Topeka talkgroup update
5. KCMO talkgroups, etc.

---

1. 17008

(That had to be the shortest section in the column ever!) By the way, if any of you have a question about the KCK/BPU system, let me know. One of the guys is quite familiar with it and can probably answer any question you may have.

---

2. Lees Summit Fire is still on 453.900. Craig says they have a some fireground stuff, too, but isn't sure what the freqs are. LS dispatches for Lake Lotawanna and Lone Jack now, which is a recent change. This is what I had listed for them a few years back.

LEES SUMMIT FD Yellow 1 453.900
LEES SUMMIT FD Yellow 3 453.525

LEES SUMMIT FD Yellow 5 453.575
LEES SUMMIT FD Yellow 7&8 460.350

That may help a bit. Craig says the PD used to be on 159.090 until they moved into their new facility. (Might be a good spot for a tour someday soon!) Now they dispatch PD on 453.0625. He says that when they say "Go to B" they stay on the same frequency. Might be a change of PL tones instead of frequency according to Craig. LS public works is still on 155.940.
I'll insert a portion of the March 99 Column that had some info on the LS system. Here it is:
"4 channel NarrowBand LTR UHF trunked radio system so the TX'd audio will sound a little lower than the normal UHF stations you hear. They use Motorola M/P1225-LS radios (that's Mobiles and Portables.) the freqs are as follows:"
453.0625
453.1625
460.3375
463.0125 (yes folks that is a legit "PP' freq)
"I have heard that they have 8 talk groups on this system. They also have 453.1500, but it is not yet on the air...there is however a unid TX on that freq that has some data bursts and a cw id on it. Anyone who can id this mystery TX? send it to me. I caught the id this morning but I was driving and did not realize it was on that radio..... so I did not pay attention to it to copy it...."
Thanks to Dr. Sm0ke for that insert, and to Craig for his info.
---
3. Bob, the Airwave Aficionado, (I'm running out of clever ways to describe Bob) had this to say about some weird traffic on a Fed frequency.
"Last evening I picked up some odd comms on 168.600. It sounded like a couple of cars of travelers passing through the area on I-70. The speakers were women and they were apparently communicating on HT's. It was mostly stuff about restaurants, lodging, etc.--typical travel stuff."
"This frequency is the U.S. Forest Service's "TAC 3" and these may have been Forest Service personnel traveling through the area. I've never heard anything on the channel in this part of the country before. On the other hand, it may have been 'bootleggers' using illegal gear."
---
4. Don had something to add to the great list of Topeka talkgroup codes in a recent column.

"The following TG's use codes already confirmed elsewhere:"
FBI 3 Security 1 (1872?)
KDEM 2
USD450
DOR Announce
FBI Announce

KHP 4 should be 272, not 176
"The following holes appear in the code matrix:"
16
656
1872
1936
3344
4880
6128
6192
"That should leave only 2 holes. But then there's no Rural Fire Common
like I would expect, nor any Alcohol Beverage Control but they may be
under Dept of Revenue. I wish someone could come up with a list for
Wichita that complete!"
That sounds like a challenge to the Wichita folks if I ever heard one!
Thanks, Don.
---
5. This is my list of talkgroups for the KCMO Edacs system. Some of my
notations indicate that I'm not sure just who it is. If you can set me
straight on them, please do!

This is my list of radio Ids for KCMO. Some are guesses, some are probably wrong. Let me know of corrections. A "P" is a pumper, an "R" is a rescue unit, a "T" is a truck (aerial or ladder truck.) My notations aren't standardized either. One day I'll get around to putting them in better shape.

>synchronization. Also, it is a spread spectrum signal.

Well, you can't use an off-the-shelf FM scanner to listen to it.
However, it's far from "impossible" to receive. Consider that:

- The GPS system uses a spread spectrum signal too, with all of the
satellites transmitting on the same frequency. In addition, the
satellites are moving at substantial speed in orbit, causing Doppler
shifts that complicate the reception of the signals - something that
isn't a problem for CDMA phones because the relative speeds are so
much smaller. Also, the GPS signals are quite weak at the earth's
surface. Despite all that, GPS receivers containing 12 channels of
spread spectrum receiver can be had for about $100

- Any CDMA cell phone is a good receiver of exactly the signals
transmitted in the CDMA cellular system - it would be useless as a
phone if it were not. The only thing that makes a particular cellphone
"listen" to one particular conversation will ignoring all the others
that are transmitted on the same frequency at the same time is that
there is software in the phone programming the hardware to do that.
If someone changes the programming of a phone, *any* CDMA phone, they
could listen to any signal they are in range of.

If digital encryption of the transmitted data was used, then just being
able to receive the signals wouldn't do you any good - you'd also need
the encryption keys to listen to a particular phone call. I believe
that GSM works this way. But unencrypted digal data isn't secure
because it's digital - it's just somewhat more work to receive.

Dave

> --
> 73, Cecil, W6RCA http://www.bigfoot.com/~w6rca

There has probably been a more detailed clarification from the FCC, but the only thing I can find in the Part 97 rules is a statement that:

"The administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. The administering VEs may require a physician's certification indicating the nature of the disability before determining which, if any, special procedures must be used."

It's interesting that the VEs *must* accommodate those with disabilities, and *may* require a physician's certification.

Here are some relevant paragraphs from the ARRL VE manual regarding Morse testing:

"Pausing the examination message, where warranted, may be a successful accommodative procedure to overcome candidates' ability to write or respond quickly. The pauses may be included after each sentence or phrase, after each word or even after each character, to allow the examinee the time to write, absorb and/or interpret what was sent. The decision as to the level of pausing warranted is determined by the VE team in conjunction with input from the candidate or the candidate's Doctor's Statement. The level of accommodation should be the least necessary to overcome the candidate's handicap."

In a later paragraph: "For a character-by-character examination, a grade of 70% or more correct characters can be considered passing".

Unfortunately, then comes the kicker, in Mark's case: "If the candidate doesn't have a readily identifiable handicap/disability or if the candidate doesn't provide a Doctor's Statement describing the handicap/disability he/she suffers from, you are not to offer the more

flexible accommodations in administering the Morse code examination."

In many situations, that puts the VE team between a rock and a hard place, because the VEs are generally not qualified to assess "hidden" disabilities like dyslexia, stroke after-effects, etc. In the case of the Handi-Ham camps, the staff and instructors (including at least one MD) who have been working with the students all week can advise the VE team as to the level of accommodation that might be needed. It's a lot tougher at a VE session where people simply walk in off the street.

Lyle, K0LR

If this were for anything other than the 5wpm basic test, I think this
would
be grounds for throwning out the whole test. I mean, you could claim 25
WPM here by pausing 15 seconds between each character.

But since someone with a handicap waiver only has to take the 5wpm
test anyway, and the 5wpm test, in my mind, is nothing but
memorization and a 'mental look up', it's not really that much different
than from what a non-handicapped ham would take. But still not the
same. Just not that different.

I'm kind of touchy with handicapped declarations. I had a family member
who was handicapped. And he REFUSED to get handicapped plates
for his car because he said 'it doesn't mean anything anyway'. He had
polio back in the 50s. He could have legally gotten an exemption to
hunt
from his car. As it was, he 'violated' the law in that he didn't
usually move
the required distance from his vehicle, instead he threw a mat over his
hood and lay on it. When he got a deer and help wasn't arround, he'd
put a noose on it's neck and drag it.

Very few things piss me off more than some '*' parking in an handicap
zone without a sticker, or like the guy in the Z-28 (with standard
shift)

in my hometown who I've seen swing into the handicapped spot at the market, throw a placard on the dash, and then hop out in his sweats and running gear and jog into the store.

Anyway, a handicap declaration should mean something. As it is, it's BS and in my mind was used strictly as a wedge to keep the no-code issue under control for a short while longer.

Forsooth, Mark! You already have the same rights. The opportunity to pass the same exams I passed exists for you. You get no guarantee of success. Your demand only makes you look silly.

Hi,
In Middlesex, NJ Transit's Raritan Valley Line uses a frequency of 161.235.
Also in Middlesex, Conrail uses its North Jersey Terminal frequency which is
160.860.
For a COMPLETE listing of NJ railroad frequencies visit my website, Central
Jersey Rails. Not only will you find frequencies, but you will find lots of
other stuff related to NJ railroading.

http://jerseyrails.railfan.net

Hi Lindsay,

Thanks for all the effort you put into TRUNKER.

I use it with a PRO-2006 to decode the control channel, and a BC-895 to do the actual listening. The two radios share pins on COM1.

I've been able to identify a dozen local trunking systems that don't appear on any frequency/trunking list.

The only new feature I could think of to put on the want list for future releases would be to identify the CW ID automatically.

Thanks again.

Your problem isn't with memory back-up. You're losing your primary
power, albeit slowly. You don't indicate if you're running off
batteries or not. Knowing that would be helpfull in speculating.

Also, the caps used for memory back-up are of a very specialized type,
and shouldn't be replaced with other types. I suggest you reinstall
the original cap.

One we damm well do

Two why don't we have to pass 13 wpm and get general if pass
5wpm at some point, becuase the FCC clearly has ruled that Code above
5wpm is not vital for the ARS. All NoCoders are trying to do is get
those ruling more consistantly applied

I've gotten ticked in Chicago myself, Mark but not enough to break the
speed limit.

If you received and paid a fine on a ticket issued for doing the legal
posted speed, you are a championship boob.

Are you realy unable to read Dave? is that the problem The
ticket said I was a hazard to traffic, that that I was traveling a
legal speed. Two I never mentioned paying fine did I? I did not pay a
fine

Hello Darren; This information (surprisingly) was not published in a public document but was in the July 1996 copy of the Sacramento Regional Radio Communications System newsletter. Another interesting item was a qoute in this newsletter regarding the noise on the system. The author stated that "while it is true that the new simulcast system will never be as quiet as the old single site repeater configuration, Deputy Sheriffs have already recognized that they now have radio coverage in areas where the old system provided none. Trade offs are involved anytime a new system is designed and deployed" Imagine that, only 42 million dollars and you have to put up with "trade offs"!

>
>-Nick

Gee, Nick, that's a tough one. Your choices are the RadioShack Pro-2066, the RadioShack Pro-2066 and the RadioShack Pro-2066. Get the picture? There is only one trunktracking mobile on the market.
Now, if by mobile you mean portable, as in a handheld, then you really have two choices.
The Uniden 235XLT and RadioShack Pro-90 are identical except for the name. The other choice is the RadioShack Pro-91, which has 150 channels instead of 300 like the 235XLT/Pro-90.
All of the trunktrackers are made by Uniden, including those sold at RadioShack.

That is your opinion. It is not mine

>anything that you can do.. Not necessarily anything you WANT to do... As

But I can not and you want to keep that way. I can operate on
HF as well as any code tested ham that does not care to use code.
Nothing in the ARS today mean I must know code in order to function
same as you on HF. Indeed I can even Use Morse Code if condictions are
right. i have done that using this very machine.

>in.. If you can get a 'walking' job without having to walk, why should I? If

But why do I need to walk if the job requires me to sit. It is
the same with Code tests. i am required to have known code at some
monent I am not required to keep this skill in order to use RTTY. I
and no othermember of the ARS has to be able to use code in order to
funtion in the ARS. I amnot required to make even one Morse Code QSO,
and yet it is vital that learn Code. My answer to that is Bullshit.
Yes thouse are the rules TODAY but this is americaia and outdated
rules can be changed, if people work for it

>you can get a driving-license without being fully functional, why should I?

You can get a Drivers licesne without being fully functional.
Indeed you can pass the tests for a driving license without any help
and still not be fully functional. You can and should be able to get
one if you handle handle the vechile safely and efectively and can
understand the laws. I don't have to be able to walk into to do that

>Think of it this way.. What if, for some strange reason, nearly everyone

While one that hates political-related discussions.. I gotta agree here.

I have noticed that any technology that could even remotely be
considered a "threat" to "them" is legislated away.... "Them" are both
IMHO the government AND Big Business. The businesses whine to the
Gov't, and the gov't acts by passing or proposing a mass of
legislation. The consumer loses.

While a strong supporter of PROPER government regulation, I just cannot
see the sense of OVERregulation or legislation.

If this trend continues I fear for the consumer and country as a whole
as new technology is slowed down because of perceived "threats". Not
Good.

John,

I have been in a similar situation. What it comes down to is that we pay for the prosecutor's witnesses and other expenses. If we have any money left we can try to defend ourselves. We pay for the government to hire expensive witnesses that we can't even begin to afford. They can charge us with anything without a shred of evidence and we will pay the bill. They don't have to prove a thing even though our Prosecutor is a convicted felon. They can base their case totally on lies and have absolute immunity from perjury. Even if they can't convict us they can make us wish we were dead. This is freedom? They have bankrupt my family and I. If you think I'm exaggerating, I hope you don't find out the hard way!!! It just so happened that earlier in the year I was charged, my wife and had testified against our corrupt Child Protective Services at the State Capitol in Indy. We weren't even allowed to have many of our witnesses testify on our behalf. The State was allowed all of their witnesses (about 50) and they still couldn't convict me. Bill K9KZ

Define what you mean by "mobile" scanner.

The BC-895 performs much better than the RS PRO-2066, and it has more capabilities, but it's also takes up a larger amount of space.

Part of the FCC charter for the ARS is to encourage self-education.
Quite frankly, I don't see CW as such a big hurdle. 5 wpm is slow. It's
easy. If you can't put forth the effort to learn this much, what effort
will you be putting into the hobby? How will relaxing licensing
requirements help achieve the self-education objective?

Are you just looking for equal rights? Or are you looking for someone to
talk to in your digital modes? Outlawing data modes from HF would help
achieve this end by forcing all packets, for example, to 50 MHz and up.
Now we're all equal, and you didn't have to learn a single new thing.

Michael.

I am gald you don't see it as a hurdle but I tried for years
to mange it back in the 70's and had no luck with it.

>easy. If you can't put forth the effort to learn this much, what effort

To say You found it easy is one thing. But please (you seem
new around here so you are getting a beter than some of the regular
ProCoders) Don't make claims about how easy it is for others. Frankly
it is insulting for you to claim it is easy for me when I have spent
years on the porhjectand not manged 5wpm. Surely 5 years is enough.

>will you be putting into the hobby? How will relaxing licensing
>requirements help achieve the self-education objective?

How does the current one serve it? Indeed I don't call
learning Morse Code educational anymore than I call learning the Art
of Foil Fencing educational. They both are skills which depend largely
on apttiude rather than entirely on wil or drive. But lets be big and
look at somebody else. A typical person. has fair time learning cw If
he worked a job that left him the same hours everyday. Indeed to use a
friend, with a new tech license. He work 2 jobs He never works the
hours two weeks in a row Yet he manges more on air time than I do. The
Burden involved in learning code clearly increased in today world. The
need for doing as declined. these are simple facts (the debate comes
when you try and say how much)

>
>Are you just looking for equal rights? Or are you looking for someone to

Fine answer and typical of the ProCode positition.

>talk to in your digital modes? Outlawing data modes from HF would help
>achieve this end by forcing all packets, for example, to 50 MHz and up.
>Now we're all equal, and you didn't have to learn a single new thing.

No we are not equal, because you are being allowed to use your
modes on HF and I am not, thereforeyou have been rights beyond those I
have, therefore we don't have equal rights.

BTW while I do think that Morse Coded Cw is as anet thing bad
for the ARS. I don't seek to impose that position on those that

disagree. You as close to a first thought suggest baning other
peopples Modes. Another Common systom of the ProCoders wanting to
control others. You want me to spend my time as you like, but I don't
seek to impose my views on you. I merely ask, nay I demand the same
rights in Public airwaves that you have

I dated a girl once who explained her fear of driving. People honk at her, and gesture angrily when they pass her. She honestly believed it was a male chauvinistic thing: woman driver and all that. The short end of that story is that she's a horrible driver. Nobody knew where she was going, or what she would do next. She least of all. Her reaction to the ticket would have been similar to yours: she would overlook what is painfully obvious to everyone else, and claim gender discrimination (or whatever) for her ills.

Mark, from all I've read about and from you, I believe you are a hazard to yourself and everyone around you. Life is passing you by, and you are aware enough of this, even if you notice nothing else. The world will not slow down for you, no matter how loudly you yell for it stop. And you are tired of it.

I sympathize with you, but cannot empathize. You see, I believe that there is no such thing as CANNOT, only WILL NOT. To be sure, in 39 years of trying, there have been times when I had to settle for rationalizing failure. Special recognition in spite of failure, or worse, changing the rules after the fact, acknowledges only abject defeat.

Why are HF privileges so important to you? Seeing as how the rules are what they are, with at least a remote possibility that it's this way for good reason, why don't you find something more suited for yourself? Not all vocations or hobbies are for everyone. As has been pointed out to you elsewhere, the largest part of the amateur allocation is above 50 MHz. Learn a mere 10% of what others need to know, and still have 90% of the pie! How much more fair can things be?

Michael.

Where the hell do you get off telling me that life is passing
me by. You don't know me you arrogant ass. wake smell the changes you
bview of the ASRS as code tested is dieing around you.
>
>I sympathize with you, but cannot empathize. You see, I believe that

Aagin five years of trying and fial is not good enough for you

>there is no such thing as CANNOT, only WILL NOT. To be sure, in 39 years

Starndard ProCode line. well even if Code were easy , then
does that fact make code testing right? NO

>of trying, there have been times when I had to settle for rationalizing
>failure. Special recognition in spite of failure, or worse, changing the
>rules after the fact, acknowledges only abject defeat.

The how should bad rules be changed? If the people that run
into them do nothing, then the system continues, doing more harm to
more people. I find it appalling that you don't seem to consider that
you might be wrong. I am certianly able to do so. I have done so in
this forum and elsewhere On this Issue frankly I can't see anything
form the ProCode side that gives me anything to worry about even if I

am wrong about how my psotiioons are formed. have you even stopped to consider the possibility of error in your biews on the subject?

>
>Why are HF privileges so important to you? Seeing as how the rules are

How important do you think they are to me? And where do you get off even asking? Indeed that is one of the porblems with the reasons given fro code testing. The SoCalled weeder factor, by what right does the ARS ask that question? By nonthing I can read in Part 97 the constitution of the Us and ITU teraty I question wether or not the government has the right to even inquire

>what they are, with at least a remote possibility that it's this way for

One I don't see even the remote reason you refer to. Indeed I have read the hisory of the requirment and am convinced that it has at best outlived it use in the ARS I am not convinced it was ever all that proper

Two I don't think the rules will stay as they are. I have read stuff from just before the Tech decision and a lot of people were saying nothing like that would happen either

>good reason, why don't you find something more suited for yourself? Not
>all vocations or hobbies are for everyone. As has been pointed out to

Now you want to throw off the bands I do have. gee If I care about the ARS as I am supposed to right and don't express my veiws and fight for then I'm frankly I am bad person but maybe in your eyes a good ham. If I pursue what I belive is right then I am a bad ham but a good person by the standards I live by or I can leave the hoby alltogether.

Gee which of those would reconend?

>you elsewhere, the largest part of the amateur allocation is above 50
>MHz. Learn a mere 10% of what others need to know, and still have 90% of
>the pie! How much more fair can things be?

As the Balcks in the South had have the bus women ahd and so on.

Do you really need to ask how much more fair things can be? I'll answer, by having people like you stopp telling other how to spend their and using the Government to back it up. If you think Morse Code is so then promote your mode. If you feel it is endanger of dying Hell i don't like the mode but I'll support governement grants to help the cuase of not letting it die. What I will not endure quietly is, is to suffer what I feel is wrong. To do so is in my view at least inhuman and un even antiamerican.To ask me to do so is well ..do i need to tell you.

>were you operating on back then ? Doin' a little bootleggin' are we ?

If you knew anything about HAM radio from back then, you'd remember
that the tech license was essentially a General without the voice. (A
WONDERFUL example of incentive licensing!) It included HF CW
privlidges on 80, 40, 15, and 10 back in 1981. Check the former
call, KA5MJQ.

Personally I operated some 40 but mostly 15. I probably did less
than 10 contacts on 80 in my life, and none on 10 till maybe 1987. In
fact, I don't think I was ever even ON 10 until I bought a RS 10M rig
and ran it SSB first, and jacked around CW a few times, but nothing
serious.

I used a Swan 500CX which I still have. I have the DC chopper
module for it (but only did a little bit of mobile work. Thing drew
40 amps when you tuned!) and the deluxe 117v AC supply with
speaker and a second 117v brick with the rubber mounting feet
for auto use with the chopper bolted to the end in place of the
cable with the Jones connector. I also have the 'semi-break in'
module which is just a VOX module turned to the limit, and the
seconday VFO. And contrary to what know-nothings say, the
Swan 500CX DOESN'T DRIFT! It's just that with a single VFO
if you adjust frequency for tones you end up walking up or down
the band. Once the rig warms up it's pretty darn stabile, and
one HELL of a lot more sensitive than my friends Kenwood
TS-820 was.

Most of my 15M work was loaded to the gutters on my apartment
building. I ran RG-58 though the wall where the cable came through,
then tied the center conductor to a screw I drilled to the down spout.
Then I 'pulled the pin' that held the thing into these 'comb hooks' and
put electrical tape around it, and put it back, effectively insulated.
I
drilled and put a small screw at the juction of the tubes to the roof.
It loaded ok, but incredible RFI.

>who has been paying attention.
>
>Don't bother playing again.

Boy are you a small minded no-nothing!! For YOUR information
the mobile DC-Chopper was a small module that 'chopped' the DC
to apply to the Swan 117CX power supply module so that the
chopped DC would work through the transformer. The Swan power
supplies came in two versions, the 117CX (which was a 117v AC
transformer) and a 220 volt verison (I forget the number). To work
mobile, the 'chopper module' was bolted to the end of the power
supply 'brick'. Normally the AC power cord had a 'jones' plug on
the end. Do you even KNOW what a 'jones plug' is? The chopper
module bolted on and mated to the jones plug, and fed the chopped
12v DC to a low voltage winding on the transformer, allowing the rig
to operate DC, but it did draw just over 40 amps when you put the rig
into tune mode.

YOU don't know squat about HAM radio, or at least about the older
rigs. So take your spouting, Mr Carrol, and YOU go back to CB,

or the appliance operator HAM areas. You'll fit right in at 14.313,
or at 27.185.

Just look at it this way, first they make it so that any decoding by
us scanner users is illegal and then you will find packet and stuff
like that will become illegal then morse code will be illegal then
most of the amateur freqs will be useless and then the US government
will have all kinds of new freqs to put on the auction block.

But you did have to answer those questions at least not of of
them. It lie to say you did. You could have choosen to skip that stuff
and then pass everything else I think or if not all of that then most
of that list can avoided if wish or if you needed to. You don't have
to score 100% on the written 70 will do even a little les if i recall
how the rounding is done on that

>
>Why was I subjected to this unessesary testing, I have no intentions of
>doing any of those things, It just wasn't fair that I had to answer
>questions on things I'm never going to use. Sheeesh....

The resaon you were asked and really opught to learn a little
about them, Like should enough about CW reconzie it when I hear it is
that you have to share the bands with these modes and knwoing a little
about them is needed to do that. But I don't need to know how to read
a CW to know if I am interfering with it or things about it's
bandwidth etc.

I have a pretty good idea where this is going. When was the last time you saw scanner users treated fairly in the media? I see "Electronic Stalkers" and "High Tech Eavesdroppers" headlines and general hatchet job in the works. Don't trust the media when it comes to scanners and such. Hell, don't ever trust them for that matter.

Source record: 120135

Credit should be given here to Steve Grande who runs the TrainWeb site out of the station at Fullerton, CA. The WebSite is www.trainweb.com. It is a must site for anyone traveling on AMTRAK. If he doesn't have the info you need, his many links will lead you to the answer.

Steves Travelogues of every Amtrak run list the frequencies for all onboard communication as you go along, as well as the freqs for the trackside automated monitors...you always know the number of axels on your train as well as speed and hotbox condition. It makes for a fascinating ride.

Most AMTRAK freqs are between 160 and 162 MHZ .

Yes it is a shame that some members of the Amateur service act like they
are superior just because they can copy CW. This is yet another example of
the failed incentive licensing program shoved down our throats by the ARRL
and the FCC back in 1968. I for one do not feel obligated to downgrade a
"lower" class licensee. In fact I actually am willing, and DO HELP those
that ask. Maybe if some of you "superior Extra's" would do the same we could
get decent operators into the service like the writer above. Think about
it.

Dan/W4NTI 38yrs Extra class.

Woah, don't do that in some cities! I don't know how it is currently,
but back in the late 70's timeframe, Philly would arrest you for
carrying
a portable scanner. They even hassled Radio Shack for selling anything
portable that could receive police.

If you went to some clubs, you might get a reception that just
reinforces
all these negative perceptions.

But if you came to the club I belong to, you'd be treated quite
politely, and
helped along the way. And even a little social pressure applied to
join (but very subtly and very politely) and become active. And then
once there, the little social tits would be applied to try to get you
active in HF and to learn the code, like having you sit down and play
HF with a control operator at the club, or on one of the field day
events. Once you're hooked, well...

But you would never be treated rudely.

I don't think you would get an officially rude reception at 99% of the
clubs out there. (There are assholes everywhere, it's a fact of life.)
And I don't think that more than 90% of the clubs out there would
even tolerate someone in their membership being rude to you for this.
Just remember though that HAM radio clubs are made up of cross-
sections of society, idiots and all.

Don't judge HAM radio by just looking at the conflict that is going on,
with both sides being loud and standing out. Judge it by what happens
when you actually TRY it, when you GO to a club, and actually SEE
what happens. Then if you run into idiots, F*** EM! And go to another
club.

Hi Karl:
3 Volt battery memory backup leads on the BC-220 Scanner attach to any main board ground (Black Wire, negative, -) and the
anode of D203, a 4148 diode located near pins 2 & 3 on IC-201(MM5785 Cops RAM) on the feature (3 x 5 inch) board
(Signal VA, Red Wire, Positive, +).

Hope this helps.

CW is the same as riding a bicycle. Once learned, it is not easily
forgotten.

Not quite. A language not used is easily forgotten. And according to the
threads here CW is just another language.

CommQuart wrote:

> 1. How many new hams will join the ranks when the
> code is abolished?

Probably not too many. The Internet has more of an attraction.
You can communicate any where world wide, on a whim.
No Technical experience required... sad to say.

> 2. How many new hams are mandated to "SAVE"
> amateur radio from oblivion??

No number of people will save it. From the looks of things, IMHO,
The bands above 2M will probably be sold off to the highest bidder.
It's a matter of $$$ and demand. We don't put any $$$ into the
Gov'ts coffers.

> 3. What happened to all of the new hams licensed since
> the VHF no-code license was introduced?

They got licenced, got snubbed by the HF snobs and went to the
internet. No license needed there and you can communicate in
any form to anyone, with virtually no restrictions.

> 4. What "AWARD" did the amateur service receive from
> congress or the FCC in recognition of the influx
> of new hams from the new no-code licenses?

AWARD??? We are a service, not really to be classifiied as
as hobby. There are services we are actually supposed to provide
to keep the FREE frequencies we use. We don't get awards.

> 5. Does anyone really believe that CW is the real cause
> behind the decline of Amateur Radio?

It's part of the cause. The primary reason is the Internet. Again,
free communication to anyone worldwide with no restrictions and no
technical requirements needed.

Think about this, if all the rules would allow such a senerio......
You can probably get your DXCC in about an hour with AOL Instant
Messenger.
Send your QSL cards to each other via Email and Email them
to the ARRL. Have them checked and back to you all in the same day with
your Certificate.
No expensive Equipment, no putting up antennas, no tests,
state-of-the-art graphics with

sound..... hey I can even talk to and see the other person in realtime video. Can't so that
with SSTV. Certainly faster the 1200 baud packet, on a keyboard to keyboard QSO.

I did some thing similiar to this in the 80's with packet. I accumulated enough replies to a
World-Wide message, that it amounted to a DXCC. Took about a week.

Tell me where is the attraction, to people with limited technical knowledge or
no interest in radio communications?

Just my opinion.

OK, here's a chance to share your knowledge:

1. What is the best mobile roof mount scanning antenna?

Maximum height is limited to about 4-5' above the roof line. The vehicle (1999 FreightLiner SportChassis 4 door) has a large flat metal roof. My plan was to mount through the roof while I have the installer up there for the cell phone, TV, and CB antennas.

2. What coaxial cable should be used?

The scanning receiver will be a Bearcat 895XLT with BNC and I am interested in performances in the trunked frequencies (860 Mhz) as well as local law enforcement in the 155 Mhz area. If given a choice, would probably optimize for 155 as the trunked systems are usually designed for good portable coverage and should work to a rusty coathanger within their service areas.

These questions have probably been asked before but I haven't been following this NG and DejaNews didn't turn up much (the key words are used too often).

TIA

As a matter of fact, Ohio does NOT have the parallel parking
section on their driving test anymore ! They got rid of it and made the
manoverability part a little harder.

So if your analogy where really valid...=-)

299. Some thoughts on the CW debate...

Newsgroup: rec.radio.scanner
Date: 1999-05-04 00:00:00 UTC
From: jl110@cleveland.Freenet.Edu
Message-ID: <7gn45hlao1@alexander.INS.CWRU.Edu>
Source record: 119855
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.scanner,rec.radio.shortwave

As I see it, it comes down to this...

While it is true that there are a few (and I mean a FEW) who would like Ham Radio dumbed down into just another version of CB. But this is, by far, nothing less than a tiny minority of the people on the no-code side of the debate. Likewise, now every pro-coder is an old Fuddy Duddy who is stuck in the 50's.

The real problem, that only a few are addressing (like the editors of PopComm), is how this plays to the people who are looking to get into Ham Radio.

First of all, anyone who has a problem with the code, or would rather skip it, is simply pelted with insults. I, for one, was called "lazy" because I was for skipping code altogether. I guess having dyslexia makes me lazy. In order to get a waiver from the code, I would have to spend big money doing to doctors for the paperwork.

Or, I could go no-code. While I am not interested in VHF, I am also uninterested in hearing about how I would not be a "RealHam (TM)" because I am a no-code tech.

Gee, with all of this going on, you wonder why more kids are not getting into Ham Radio ? Unless you fit into some kind of cookie-cutter definition of "RealHam (TM)", you get dumped on coming or going.

SWLing looks a lot better as an alternative all the time. It's rewards, while at times a bit more modest, tends to come at a much more reasonable price.

There was a time when SWL's where the best group for Hams to recruit out of, but that time has come and gone. Ham radio now needs to ask why so many SWL's are voting with their feet.

The civil war in Ham Radio is only acting to turn many people away. I for one do not look for strife, insults, abuse, judgment and childish behavior in a hobby, I look for fun. Myself and others are willing to put forth the effort. But there is a distinct difference between meeting requirements and running a gauntlet of frat-house like initiations.

Yeah, I could pass every technical part of the tests, I could easily learn the proper operating rules. But is it worth it to enter a hobby where anyone who dares disagree with "RealHams (TM)" is lazy, a crybaby, a spoiled cyberkid, etc. ?

Ham Radio has only one place to look for the source of it's problems. It's called a mirror. People are voting with their feet, my friends. I am the last person in the world that wants to see Ham Radio die, but the choice is not mine-

It's all up to the hobby.

When AM came along, many where opposed.

When SuperHet. receivers came along, many where opposed.

When SSB came along, many fought it.

Change is always coming, why fight it ?

The issue is bigger than CW. The real issue is what kind of hobby Ham Radio has become, or rather, what it has degenerated into. While SWLing has it's share of silly moments, it has not degenerated into the sort of malicious, snotty behavior that now appears (from the outside at least) to be slowly permeating Ham radio.

Perhaps it's because SWL's listen ?

It's safer to go with the flow of traffic than to drive 15 miles
slower. Here, following a rule just for the sake of following rules is not
as safe as breaking it.

In a previous article, commquart@erols.com (CommQuart) says:

>
>1. How many new hams will join the ranks when the
>code is abolished?

Hard to say. The hole that has been dug is awful deep. A lot of
people where turned off some time ago, but I think a good number (in the
long term) is possible.

>
>2. How many new hams are mandated to "SAVE"
>amateur radio from oblivion??

Good question. I will have to think about that one.

>
>3. What happened to all of the new hams licensed since
>the VHF no-code license was introduced?

Perhaps they got dumped on for being second class no-code techs by
the "RealHams (TM)" ? I think the deepening of the war going on now acted
to chocke out some of the possible growth.

>
>4. What "AWARD" did the amateur service receive from
>congress or the FCC in recognition of the influx
>of new hams from the new no-code licenses?

I think it bought time for Ham Radio. Without that influx, I think
MORE bands would have been lost.

>
>5. Does anyone really believe that CW is the real cause
>behind the decline of Amateur Radio?
>
CW alone ? No, not at all. The attitudes reflected by the CW debate
? Yes !

Trent, It sounds like you are very happy as a SWL. Why do you want to become
a HAM if it is:
1. Impossable for you to learn code.
2. Too expensive to get a CW waver.
3. Too much greif and insults from other hams.
4. Full of other people who are Fuddy Duddy's.

Man.... why dont you stay a SWL and forget Ham radio?
Or do you think it would all change if someone would just GIVE you a
license.

Greetings Trent

You get an A+ for reasoned, well-thought out replies in my
book.

Personally, I have never had a problem with the no-code
license, or the elimination of the CW requirements from the
ham exams. What is a complete turnoff, in my opinion,
is the all-to-prevelant attitude that CW is dead and obsolete,
and that some folks feel they "deserve" an amateur license
with no effort on their part.

Regards

Peter, K1ZJH

Greetings Trent

3. Most of the no-coders in this area got disgusted enough
with repeater operation to go and upgrade on there own.
A rather surprising observation.

4. Would like to believe this, but I am not convinced that
strength lies just in numbers.

5. A lot of the problem is brought on the attitudes of those
positioning for the elimination of the code--arguments such
claiming that "code is obsolete, or not used" is only going
to alienate CW operators only further. Some have been some
reasoned points made (such as yours), but others seem to
reflect a lot of hostility towards hams just because they use
CW in this modern age.

Athough I don't fully agree with Trent's stance in total,
my hat is off to him for giving honest and well reasoned
responses to the issues on hand. My feeling is Trent is
a chap open to both sides of the issue, and I would be
willing to hear his side of the story.

How could the BC 235XLT be superior to the PRO-90 when they are the SAME radio with the exception of the spare battery and charger that come with the 235XLT? Just curious why you make that statement?

Dave Kaye

I have found the 895 to be the perfect mobile scanner. I have an 895 mounted in my car and use my 235 as a true portable for when I am out of the car. With some creative placement, the 895 can be mounted in any car. I have seen them mounted in cars as small as a Geo Metro 2 door and as large as a Chevy Suburban. I have a Chrysler Concorde and it is attached the side of a gear shift housing near the floor. Loss of leg room and space is minimal.

Just my two cents.

I've got the SC1PC and I don't like it at ALL!

They've REALLY screwed up this product.

I'd suggest finding a different one. This ain't worth it.

>E Meyers

Even better is to go out and get a nice new one with a floating point charger. The charger will keep the battery peaked until the power goes out (as happens quite often during the late summer months here in Phoenix) and then power the scanner for about 12 hours thereafter. Most outages last less than 2 hours, so you don't miss a beat. My battery runs 2 scanners, an 895 and a 2026 and will last 8-10 hours on a single charge.

My setup cost all of $30.00 to buy and set up in seconds. Well worth it.

>about. Posted speeds are not simply "pulled out of a hat".

Well, actually, no, they are not "pulled out of a hat", however they were (and are) to some extent politically motivated. The speed limit was originally dropped to 55 back in the 70s in response to the oil/gas crisis of the time. Eventually more oil was miraculously discovered, but neither the speed limit nor the gas prices ever recovered (and wasn't I thrilled to have this all happen just when I got my driver's license).

The problem is is that roads were engineered for optimization to specific speeds and it was/is almost natural to drive at those speeds (if you have a road engineered to be comfortable at 45, you tend to drive around that limit, if it was engineered to 70, you tend to drive closer to that. Wow, miracle of miracles...revenue!!! Now, I'm not saying it was solely the ticket money that prompted the reamining at 55, they tried to claim it was safer (despite not having any valid third-party studies to back it up). Eventually, the politicians have given way to the people on this one, so the limits are starting to come back up.

Because you can get all of the above for less money from a Uniden distributor than you can from RS. That makes it a superior value. Look at it this way: Which car would you buy, a base model with no-frills or options, or a fully loaded model for the same price? Wouldn't you then say the fully loaded model is superior to the base one?

The PRO 90 is a nice radio, but by the time you add the extra battery and charger, you've spent considerably more than you would have on the Uniden version.

I like Radio Shack for the radios that you CAN'T get anywhere else, like the PRO91 and the 2066. Uniden doesn't make their own versions of these.

I second that. A well thought out statement on the code-no code issue. I operate almost 100% CW on the HF bands and on sattelites but I am more that a little disappointed with all the name calling and foul language used by both sides of this issue.

On another note, PLEASE don't cross post this discussion to the rec.radio.amateur.space group.

I wasted my time learning CW and getting a general lisense. HF is
overwhelming used by fuddy-duddies who use it to talked about health
problems. Or re-re-re-hash tales of WWII. What a bore.

The fellow is smart to stay away till the CW requirement is dropped.
Yes, things will change when HF priviledges are GIVEN away, thank god.

Except that the Pro-90 goes on sale often and is a better value when you can order a spare battery for $19.99. And no, I wouldn't buy a fully loaded car for the same price if I had to send it hundreds or thousands of miles away to get it fixed when the regular model can be fixed at almost any dealership anywhere I go.

Regular price of a Pro-90 is $299.99, but has been on sale numerous times for $199.99. A spare battery can be ordered for it for $19.99.

I apologize if you took my reply the wrong way. The way you stated your opinion of the PRO-90 led me to believe it was the radio's PERFORMANCE that was inferior. Thanks for setting the record straight. BTW, I was able to get a CRX-120 charger and battery for my PRO-90(which brings it up tp BC235XLT specs) for a total of $31 shipped direct from Uniden! It is a good unit. I am happy with it so far.

> 39 - 69.4 { invalid

Michael Derryberry <mderryberry@netxn.com> provided the correct Amateur Radio list (minus #38 = 250.3), however it should be noted that there are four 'standards' for naming CTCSS tones:

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

CTCSS (PL) Frequencies

Freq (Hz)	Designator EIA	Ham	Freq (Hz)	Designator EIA	Ham	Freq (Hz)	Designator EIA	Ham
67.0	L1	01	110.9	2Z	15	179.9	6B	29
71.9	L2	02	114.8	2A	16	186.2	7Z	30
74.4	WA	03	118.8	2B	17	192.8	7A	31
77.0	L3	04	123.0	3Z	18	203.5	M1	32
79.7	SP	05	127.3	3A	19	206.5	8Z	
82.5	L4	06	131.8	3B	20	210.7	M2	33
85.4	YA	07	136.5	4Z	21	218.1	M3	34
88.5	L4A	08	141.3	4A	22	225.7	M4	35
91.5	ZZ	09	146.2	4B	23	229.1	9Z	
94.8	L5	10	151.4	5Z	24	233.6	M5	36
97.4	ZB	11	156.7	5A	25	241.8	M6	37
100.0	1Z	12	162.2	5B	26	250.3	M7	38
103.5	1A	13	167.9	6Z	27	254.1	OZ	
107.2	1B	14	173.8	6A	28			

Motorola differs from EIA with: XZ (L1), XA (L2), XB (L3), YZ (L4), YB (L4A), ZA (L5). ICOMM does not use 97.4 and uses one less than the amateur numbers above that (i.e. ICOM #25 = 162.2).

: What is a complete turnoff, in my opinion, is the all-to-prevelant attitude that CW is dead and obsolete,
: and that some folks feel they "deserve" an amateur license with no effort on their part.

There is no honor and glory of being a HAM anymore, it is just now a hobby for nostalgia sake.
Therefore we all deserve to be HAMS as there is nothing to gain from using HAM anymore and there
is nothing special about HAM's anymore except inheriting a bunch of narrow minded old farts for new friends/enemies.

We could certainly use more sharp fellows like you, Charles. What do
you like to discuss--computer games? music videos? navel piercings?
How do you propose we limit the content of conversations? You must have
several proposals for accomplishing that.

> The fellow is smart to stay away till the CW requirement is dropped.
> Yes, things will change when HF priviledges are GIVEN away, thank god.

By the way, you'll have to suffer a few decades of my crowd re-hashing
Vietnam War tales and we've only begun our future of health problems.
Hope you can hang on for the fun to begin.

Personally, I have never had a problem with people wanting to
use code because they like it or because of certain advantages in
some situations. What is a complete turnoff, in my opinion,
is the all too prevelant attitude that CW operators are better than
non-CW operators, even when working voice,
and that some folks feel they "deserve" extra priviliges because
they have a skill that is largely irrelevant to ability to use
HF frequencies and serve the public interest well.

Trent made quite a few good points.

I hear quite a few ham operators talking about the hobby dying. I was recently at an ARRL meeting where this was dicussed then in the next breath it was commented on what *type* of people would be allowed in if the code requirement was lowered. This is the kind of attitude that is driving people away.

I have no doubt that I could pass all the technical test and I am now working on my code. The thing is I have no real desire to do code but I am doing so simply to upgrade my license for the other priviledges.

339. Chirping Noise?? Uniden BC230XLT handheld...

Newsgroup: rec.radio.scanner
Date: 1999-05-04 00:00:00 UTC
From: Phil Smalley <ziggy7445@yahoo.com>
Message-ID: <7gnsrm$99h$1@phxtst22.phx1.aro.allied.com>
Source record: 119895

The subject says it all. I've got a BC230xlt that's about 3 years old. It's been thru alot, I'd say the case is a 7 out of 10, misc. scratches, numbers worn off the front, etc. However, up until recently, this little guy ran perfectly. Now, I'm beginning to notice a chirping sound when the volume is up more than halfway and receiving a strong signal.(I generally keep it cranked up all the way when mobile so I can hear the darned thing!). If the volume is down, it doesn't do it, but I'm concerned that it will get worse.

Has anyone else experienced these symptoms on their Uniden scanners? Were you able to fix it, or should I plan on retiring this one and getting a new unit? With the 245 coming out this year (along with another new unit that I heard about recently, but can't talk about yet) I was planning on upgrading to a better unit anyway, but I had hoped my wife could use this one.

Any info is appreciated. Thanks,

-Phil

> As I see it, it comes down to this...

I've hesitated to get into this, but...

I got my novice when I was eleven, extra at 14 (25 years ago, which I guess makes me one of the "old farts" :). The code wasn't a big deal for me, but that's me - people have different skills, not necessarily better, just different.

I don't have any problem with eliminating the code requirement from a "we had to go through it so you do too" elitist attitude. For me it's more basic; one of the reasons ham radio exists is for emergency preparedness. I believe in an emergency situation I could hack together some sort of CW transmitter out of practically any electronic components that were on hand; tubes, transistors, TTL logic gates, whatever; it doesn't take much just to produce a carrier. I probably couldn't hack together an FM or SSB transmitter, even AM might be a stretch depending on what parts were available. I'd *like* to think that there'd be someone out there who would be able to decipher my transmission.

(In fact, that sounds like kind of a fun contest - give each contestant a random assortment of parts or some random piece of consumer gear, say a boombox, and see who can get a readable signal out of it.)

I'm not a Y2K survivalist, I don't get uptight over nuclear proliferation any more than anyone else does, I'm not expecting the world to end any time soon. Just seems to me that we're better off for having this skill in the community.

To learn about High Definition Televison and Digital Television

visit the online editions of two broadcasting & cable industrusty
magazines:

http://www.broadcastingcable.com/

http://www.multichannel.com/

Enter the phrases "High Definition Televison" and "Digital Television"
in the search boxes to read past articles about HDTV & DTV.

HDTV operates on UHF channels, for example:

A TV station will broadcast it's analog signal VHF channel 7
with it's HDTV signal broadcasting on UHF channel 53.

To "scan HDTV" you will need a rooftop VHF/UHF TV antenna mounted
on the roof of your house, and a HDTV compatible TV set.

Now, could somebody please explain how digital tv from the cable tv
company works.

The Grove Scantenna is a piece of %#@& where as the Monitenna is as you say basically bulletproof. The best method of installation of this antenna is on a non-metallic mast (such as Schedule 80 PVC) and place a guy wire at the very top and guy it securely from there. If done like this it isn't coming down unless you take it down.

If you can afford it, try the Sony SW-100, as it is the size of a pack of playing cards, and the performance is basically similar to what you can expect from a $1000.00 desktop (particularly with headphones as it has a tiny speaker). It will cost you $350.00 though. Otherwise cut yourself a 5ft wire for listening to shortwave on the R2.

R-2 is sensitive enough to listen to major SW broadcasters, but NOT with
the stock antenna. You need to use a longer whip or telescoping whip
antenna. If you plan to listen to SW while on the road, why not
purchase a true portable SW rcvr? I speak from experience :)

Looking for the older model with a white ring just above the BNC connector, not the newer one with spring coil. This whip extends to 46" fully. I think they originally sold for around $15 to $20. Performed great on the low band (30 to 50 Mhz). I had one years ago and sold it as a package with another handheld scanner.

359. BEWARE OF ICOM PCR1000 PCR100

Newsgroup: rec.radio.scanner
Date: 1999-05-04 00:00:00 UTC
From: Len <myra@theuminas.com>
Message-ID: <7goc9b$86r$1@antiochus.ultra.net>
Source record: 119915

I recently purchased an ICOM PCR1000 (IC PCR1000) and was shocked to find out that there was no documentation on the serial port command interface. After several emails from ICOM on the subject, it is apparent that ICOM is not going to make the details of the command set for this radio available except under license and then only in certain specific cases.

While there appears to be information on the net with regard to this interface, it's probably not complete and certainly not supported or well documented, preventing me from using this radio.

The bottom line is, if you plan to do anything with this radio that is creative, better to find something else to buy. I note that all of ICOM's competitors DO release the command codes, and I'm replacing the PCR1000 with a unit from AOR.

My advice is to avoid the hassle and avoid ICOM.

The software that comes with the ICOM PCR1000 is very basic and quite cumbersome. It could easily be replaced and the functionality of the radio enhanced with Delphi or Visual Basic, but.....

73,
Len

WELL MR. TROJAN HORSE, FRS IS ALMOST LIKE CB RADIO EXCEPT WHERE CB RADIO
OPERATES IN THE SHORTWAVE RADIO RANGE OF AROUND 26.995 MEGACYLES TO
27.405 MEGACYCLES IN A.M AND SIDEBAND MODES, FRS OPERATES IN THE UHF
RANGE AROUND 467 MEGACYLES IN NARROW FM MODE.

Nobody is advocating a license for no effort, but advocting a
license where the effort makes sense, but CW IS obsolete (thorugh it's
deathn is only being predicted by ProCoders) so is SSB, and FM. Indded
all ham are pretty much obsolete in hobby that once lead in technical
areas, that is not a good sign. and no ending the testing of CW will
not change that overnight if at all, but ending the stranglehold of
the most obsolete of our modes has to aid us in moving forward

The "hamcomm" interface converts audio data from your scanner into
rs-232 data for your software. Most are built into the hood of a serial
cable. Other names for it are "data slicer" and "2-level decoder". One
site that sells them (there are many) is:
http://www.pervisell.com
They are also easy to build. There are many sites. Try a search. On
my page:
http://www.ktb.net/~gmitch/decoders.htm
If you click the Mobitex link there is an example.

Hi! I have the RS PRO-2066 and am very happy with it. It is small enough to mount in-dash (in place of a radio) or I mounted my radio on the center console between the two front seats.
It has great audio and easy enough to program-although not a good idea while driving! E-mail with specific questions and I'll get back to you. I also have the BC 235XLT handheld radio-superior to the RS PRO-90.
For an excellent web site of product comparisons-www.strongsignals.net.

>the VHF no-code license was introduced?

They came in by the boat loads. Just look at which class has the most hams.
Look at the class that brings in the most new hams.

>4. What "AWARD" did the amateur service receive from
>congress or the FCC in recognition of the influx
>of new hams from the new no-code licenses?

Lots of hams donating time and resources to emergency communications.

>5. Does anyone really believe that CW is the real cause
>behind the decline of Amateur Radio?

I think it's the biggest cause *today*. Testing for CW isn't needed today
IMHO. I'd rather that people have to learn more theory instead.
Those who WANT to use CW on HF should have to take a CW test maybe.

73,
Tom

I had a oppurtunity to show off the Power of the TinyTenna!

I was a another Ham's place this last weekend, we were out side playing with my Sangean ATS 909 and the TinyTenna. We thought we would see if the TinyTenna would "overload". We put the aligator clip on a 80ft guy wire holding up one of the guy's towers. What we saw then, we could not believe it! There WAS NO OVERLOAD to the Radio! Remember, this is connected to a system of Guy wires!

I have witnesses to this.

Frank:

First you toggle to the proper band, pressing the BAND button, then you coarse-tune the frequency, (numbers to the left of the decimal point), by holding down the FUNCTION button, and turning the VFO knob. Then you release the FUNCTION button, and fine-tune the frequency, (numbers to the right of the decimal point), by turning the VFO knob. It may sound awkward at first, but with a little practice, it's quite fast!

Bill Crocker

It seems like everytime I start thinking about going and getting my no-code license I start hearing this damned bickering and hear the way the no-code guys get treated by the "CW annointed ones" on some of the local repeaters I kind of back off. I wonder how some of these guys would treat a person when you went to take the test? I just don't understand why some of these guys want to make people who are interested in the radio hobby so unwelcome just because they don't want to lean code. I would think that being a good operator and being active in the local group would be much more important than learning some code.

Radio Shack Unlimited is no longer available in Canada.
I actually found an RS store with the RSU catalogs on
display. When I pointed them out to the salespeople,
they were hustled out of sight.

Any other ideas?

Few for that reason, but it will be easier to keep the new
ones we get, and we will start the process of closing the widening gap
betwen the VHF and HF ham world
>
>2. How many new hams are mandated to "SAVE"
>amateur radio from oblivion??

That is not the job of the new hams. As to how many well that
depends on how they are treated. If people would treat all new hams
better then fewer will needed.

>
>3. What happened to all of the new hams licensed since
>the VHF no-code license was introduced?

Some of them are here, many of them were dirven off by the
elitism and BS of the HF hams
>
>4. What "AWARD" did the amateur service receive from
>congress or the FCC in recognition of the influx
>of new hams from the new no-code licenses?

None of of course, but then we are not suppoed to expect
compensation for being hams and saving ham radio, that is part of the
price in our license (to be a bit free with the part 97 wording)

>
>5. Does anyone really believe that CW is the real cause

There is plenty of soundcard software at:

http://www.muenster.de/~welp/sb.htm

I'm not sure if that includes packet, but it's worth a try.

Regards,

Peter.

Hi everyone,

Is the Icom R2 good enough to listen to the major world band broadcast stations like BBC, Deutsche Welle, etc., especially with the stock antenna? I need an ultra portable receiver to listen to world band stations while on the road. Thanks in advance.

Bill

I just don't think that CW should be the decisive factor in issuing
a ticket. Which is more important, 13+ WPM CW or knowing more theory and
practice ? I lean towards getting rid of CW tests, but I could see a 5 WPM
across the board CW test.

But the worst danger is when a young person checks out Ham Radio,
perhaps has an opinion, and gets slandered and insulted. This is what is
turning the kids off.

IMPORTANT CORRECTION !!!!

I wrote "..now every pro-code...is a Fuddy Duddy...".

I meant "..NOT every pro-code...is a Fuddy Duddy...".

This, of corse, the spell checker did not catch. Sorry for the typo
=-)

>You seem to have overcome your dyslexia in this forum perfectly well.

If I remember to, I use a spell checker. But also, it was a LOT of
work to learn how to type, write or even tie my shoes when I was a kid.

Imagine, "Use your right hand to...Your Left hand to..." when
"Left" and "Right" are almost alien concepts ! As a kid, it took a lot of
work.

Oh well, guess a minor (there are so many people with so much
bigger problems) CNS flaw makes me lazy =-)

My dad (WB8ETH, silent key) could go over 20 WPM. While I thought
it was cool, I just am not able. These things happen. I think CW has a
place, just not the same place it did 30 years ago.

I see your point quite well.

There is an article in an old issue of Ham Radio Horizons that I
read. It was about a group of top flight Hams who hid a secret. Turns out
they where trying to out do each other in working the world bands on one
tube gennys =-). I wonder how many hams might be closet SWL's (ie: Wayne
Green types who might swing their VFO over to 25 Metres once in a while,
but too afraid to admit it) are out there.

Ham radio still has the distinction of being the best way to get
comms going in case of natural disasters and other emergencies. No question
about it. The military is the only group of people who can beat them, but
the hams are a much mroe practical tool for the job.

>From: frankw@soltec.net

>Can anyone identify this malexder? I have no idea who he is or what his agenda might be, but I, the Frank Wells referenced below, deny the bs listed below.

Hi Frankie!
Of course this little charade only proves what I confirmed long ago: You're a flaming nut case!

You're also a stinking, lowlife liar. You're a coward who thinks hiding behind grabmail.com, my-dejanews.com, hotmail etc. accounts will conceal your identity, so you can snipe at people without exposing yourself. Well, fool, it don't work that way.

Anyone who cares to do a search on some of the aliases you have used in several newsgroups where you carry on your skulking, cowardly antics will easily see what the orignation news proxy is. Here are ones that I gathered in only a couple of minutes from your beech@grabmail.com and beech185@my-dejanews.com rantings and ravings:
207.71.218.89 pm1-39.sba1.avtel.net
207.71.222.152 pm8-2.sba1.avtel.net
207.71.218.137 pm2-37.sba1.avtel.net
207.71.222.96 pm6-46.sba1.avtel.net
207.71.222.71 pm6-21.sba1.avtel.net
204.96.225.93 soltec.net
204.96.225.88 soltec.net

AvTel.Net is the parent of Silicon Beach (www.silcom.com) in Santa Barbara, CA, where you now live. Soltec.Net, where you are posting through today, is in Campaign-Urbana, Ill. is where you used to live. When you think you're really being tricky, you use your SB account to access your Soltec account. Funny, for a guy who works as a computer analyst, you're not too competent.

Now you mentally crippled whacko run the hell along or I'll complain to your ISPs (again). You've caused enough trouble here as well as in alt.mountain-bike, misc.survivalism, and a bunch of other newsgroups.

Most digital trunked systems are also encrypted, thus making them quite
private. Here in Cleveland our trunked system was one of the first digital
systems in the country. I don't think Motorola is going to release the
encrytption algorithym for there systems since that would go against their
customers wish of privacy.

Frankie,
When you're not here obsessing on me, you're over in several other newsgroups bothering other people. Take alt.mountain-bike, for instance. You claim to physically handicapped, and unable to ride a bike, but that doesn't stop you from making jerk of yourself, does it?

Here's a little something that I picked up for laughs. One of the people you attacked posted one of your e-mails to the group. Notice "Frank Wells" <beech@grabmail.com> in the From: line. Idiot, slipped up and forgot to hide his name. Notice the Also notice the ISP in your response goes back to Silicon Beach.

You're too stupid to be sneaky. Slimeballs like you also leave a grease slick behind, no matter where they go.

Mike,
There's something you don't understand here in your delusionary state. I'm not a mountain biker. Can't be. I'm physically disabled.

I've been assigned here by a group that surveys newsgroups looking for people, who by the evidence of their postings, need psychiatric help. I've been assigned to cajole, bully or harass (Now, there's a word you won't be able to resist playing with in a Subject line) you into getting help for your condition. You must know, given your training and even if you were the basest Skinnerian or rat runner, that you are ill. You are alone, friendless, unloved with only your obsessions giving you the barest illusion of a real life. Is that really the life you want?

You could have a crisis, a real psychotic break, at any time. If that comes without a support system, you are only weeks or, at best, months

from the terrors of the mentally ill on the street. Don't delay, use
your health insurance to initiate some treatment while you still have it.

Yes, and they'll publish a story like that with or without our input. Better to be heard on the issue than to silently watch the aftermath, wouldn't you say?

It's exactly this kind of attitude that makes people nervous around us scanner types. For some reason scanner listening and conspiracy theories seem to go hand in hand, and it's all due to all us scanner folks hiding our hobby from the rest of the world. People would rather make random assumptions like the above than investigate the issue and gather all the facts. This is pure ignorance, to be blunt.

People are always afraid of what they don't understand. Therefore, public education is the best weapon we can use against those who want to see this hobby gone. Once people understand what scanning is all about, I think we'll see a change for the better.

Of this list below, what are folks' personal favorites, and why? What radios would you avoid?

I'm about to replace a well-used Yupi MVT-7100. I'd like a handheld wideband receiver with PC-setup capability, and the best (that can be expected for a wideband) rejection of intermod. My urban area constantly ties up my 7100 with interference.

I've heard the AR8000 is good in this department, and the features look interesting. But I don't know about the other units on the market, and I don't want to miss out on something terrific.

Thanks,

Dave

While it is sad that Icom treats the commands for the PCR1000 like nuke
launch codes, all is not lost. There are many sources for the codes.
Even I have written 2 programs to run my PCR1000 from DOS (or in the
case of my pre-MSDSO Tandy TRS80, model 100 a tataly Rom/Ram based
antique) and I am not a programmer.
There are several good free after market programs and at least 2 very
good comercial programs.
In short, if you need a radio that covers from 100KHz(mine goes down to

at least 60KHz because I can receive WWVB time code with a poor antenna)
to 1300MHz, and that can be driven by a wide variety of computers, then
the PCR1000 could be ideal for you. The 50KHz BW is great for NOAA APT
wxsat imaging.
The add in DSP is creat, but more usefull for SWLing than scanning.

Sure they can, just the same as if you illegally modify Ham or CB equipment.
The reason for Tandy's statement is simply for C.Y.A. purposes, so that if
someone does tamper with their scanner and then uses it illegally, the
individual is responsible, not Tandy.

Just got a Yaesu communications receiver that goes from 60mhz thru 905
continuous no blocks. What interesting frequencies can I monitor besides
aircraft, police, repeaters, cellular, and marine? It slowly scans continuously
or scans 10 memory banks 1 at a time.
Its a nice piece of equiment but it does not have the speed of a scanner.
Any suggestions on frequencies? please email

425. Official Trunker Homepage?

Newsgroup: rec.radio.scanner
Date: 1999-05-05 00:00:00 UTC
From: Phil Smalley <ziggy7445@yahoo.com>
Message-ID: <7gq1qn$2kf$1@phxtst22.phx1.aro.allied.com>
Source record: 119714

Is there an official trunker home page, or is the one on
http://web2.airmail.net/lblant1/dfw/digital.htm it?

The reason that I ask is because the source code for trunker (I assume it
should be trunker.c or something similar) is missing from the latest
download version. I saw etrunk.c in the archive, but I don't think that's
it.

Thanks,
-Phil

>Yes, and they'll publish a story like that with or without our input. Better
>to be heard on the issue than to silently watch the aftermath, wouldn't you
>say?

Nor really. The media is not to be trusted, especially in technical
areas that they usually don't understand.

And, there are a few people here and on other NG's of which the same
can be said. Like the jerk that posted MDT transmissions on a web
site. If some of these people talk to the press, then the press can
say that "experienced scanner users said..." and like that. Why help
them at all. If they want to write bullshit articles, why do anything
that they can use as 'research' and 'informed sources'.

What with all the posts here, it is obvious that many people share
their knowledge and experience with anyone who wants to log on. No big
secrets here. No one hiding anything.

As to people being afraid of what they don't understand, this is human
nature. People have to *want* to learn to overcome this. If they care
enough to do so. But they aren't likely to learn anything factual from
the media.

Now, as to writing this article. If this author can not put together
an excellent article based upon nothing more than the information
posted here, they aren't much of a writer. I could do this without
much difficulty. And produce a very good article.

Len, I can only assume that you have been living in a cave for the last year
or so. Even a cursory check on the net *before* you paid for the receiver
would have revealed the "shocking" truth.

> After several emails from ICOM on the subject, it is apparent that ICOM is

It's a conspiracy, Len.

> While there appears to be information on the net with regard to this
> interface, it's probably not complete and certainly not supported or well
> documented, preventing me from using this radio.

It was more than adequate for me to use my IC-PCR1000 with Linux after
a few hours of opening the box.

> The bottom line is, if you plan to do anything with this radio that is
> creative, better to find something else to buy. I note that all of ICOM's

> than then. That is a fact

Mark, In order for me to comprehend it, you have to write it. You
didn't write what you are now saying. You tacked it on later.

> I wioll not bother with the rest of the drivel of a bigot that thinks
> the spanish speakers should bann from the ARS in america

Again you've managed to say something which I never stated. Reading and
writing are going to be far bigger challenges to you than morse testing
since you'll likely need those skills daily.

You seem to think I dislike a certain group of people. That's not the
case. It is YOU I don't care for. You're THE classic whiner looking

for a hand out. You aren't looking for equality of opportunity. You're looking for a special case to be made for you.

> out Pete Mahy's program

The LD84[0248ACE]? and LD86[024]? queries appear to be direct access to the ADC's that monitor various signal levels in the receiver. Off the top of my head, LD842? queries the level of SMAD [signal strength], LD844? asks for CTAD [centering]. I suspect that LD846? asked for L1AD [first LO PLL lock voltage], but haven't been able to prove this. LD84A? appears to be a copy of LD842?, but is probably the scope S-meter level. The others are unknown and always show up as a "00". You can make educated guesses by perusing the service manual for the receiver.

Note that these are probably "raw" measurements. The SMAD level, for example, is almost certainly mangled by the receiver internally to the semi-precise signal strength reported by one of the "I" commands.

I am aware of what the H8xx command does, and would be glad to describe it here, but alas, this was discovered by another party -- and that glory is his to claim, not mine.

The last known file that documents the command set has some minor errors, omissions, and could be clarified in places. I haven't a clue who maintains it though, so I don't know who should receive send updates/fixes.

Are you so wrapped up in yourself that you worry what your CW speed says about you? For heaven's sake, grow a skin, learn the code, pass the test, and get on with your life! You're not going to change "the attitude" with whining. I might dare a guess that it's the whining that's objectionable, not so much the actual thought of changing the CW requirements.

To tell the truth, I'm pleased to find a lid bigger than I. I feel I might be able to help him, as others have helped me.

So, who's preconceived notion is stopping you from getting your ticket?

Michael.

The media has no interest in "investigation" or "gathering facts". They
exist to create audiences for their advertisers. Period. Hence, we can
expect that geeks with scanners will be considered the Spawn of Satan,
yet another fear for the masses.

Guys,

One has to understand the media process. They can take the truth and change it to suit there our means. After 30 yrs. law enforcement I have been the subject of several news items with the investigations that I have been involved in. The media changed the facts of the investigation to suit there own means of more than one occossion.

The news media is interested in selling news and nothing else. They will do what ever it take to accomplish that goal.

Now, back to scanning.....

If 155MHz band is what you are mainly looking for, use a standard commercial antenna for that band. I am doing the same thing for 45.32. It is going to be about 18 inches if you are building one yourself.

Unless you have specific needs for 1300+, there just is not a lot up
there.
There was a post covering some of the uses, but they are really few and
not too easy to find.
I have a non scanning radio that tunes from below 1000MHz to 2500MHz
and the only "common" signal is all the microwave ovens in the area.
Yes there are some point to point private telcos, STL and the like, but
you have to be nearly between the transmiter and receiver to get
anything. I keep this beast because, amoung other weird uses, I have a
block downconverter that converts C-band TVRO 3.7-4.8G) amd I can
receive satelite TV. Of course we watch less than and hour of TV per
typical week in our household, but if we ever feel the need, I can
recieve all those unscrambled TV signals. All the garbage ads for
mirical knives, waxes and all the preachers a man could ever need.

Why Bother? wrote:

> Is your Linux code on the web for download?

No, not on the web. But I could mail you a copy -- its GNU and all. However, it isn't what you would call a "polished" piece of software. No toolbars. No animated icons. No dancing paperclips. Its a bare bones command line thing that was designed mainly for protocol exploration (it exercises all known functionality) and simple receiving (I spend most of my time dwelling on a frequency, or trunk-tracking, than scanning huge lists of channels). More interesting than extending this to scanning and the like is the process of designing a higher level, "client/server" protocol [patterned after "X"] that can interact with the receiver in a generic way.

Ok, I see that a bit of advice is needed here, before you blow something up! DO NOT, I repeat DO NOT attempt to hook the tape recorder`s Pause jack directly to the jack on the 456, or you will definitely get SMOKE. The tape recorder`s Pause jack is directly in the power line to the tape recorder, and there is about 100 MA flowing thru that line. When you plug the Opto 456 directly into that line, that 100 MA is gonna be apllied to the Opto. You have to rig a relay to do it (5 volt reed realy does a real nice job). Neither side of the jack on the recorder can be connected to ground, at either end, since this will short the 100 MA tape current directly to ground (CRACKLE!)

Whew, talk about crossposted...
Anyway, JMURRAY, they DO allow FRS radios in every theme park that I've run into... The bigger ones WILL be crowded. The easiest solution is to spring for a couple more bucks and get radios with CTCSS. The easy way to think of CTCSS is... umm, well... each of your (up to) 14 channels can have up to 38 "subchannels"... just set each of your radios to the same CTCSS code and they'll only hear calls from other radios set to the same channel AND code.
HTH.
BTW, RadioShack has 4 or 5 different models of FRS, and at least a couple of them have the CTCSS feature. HAND

Well, not exactly a cave, but perhaps I do have more money than brains. I never expected in this day and age that ICOM would take a position like that - you know - you buy a name brand because you expect certain things and you shouldn't have to check the net to find out the bad stuff.

To those who made constructive comments and offered codes and assistance, THANKS!

To anyone who might consider the purchase of this radio, I would still recommend looking elsewhere. Product documentation and support (great as this might be) should not be the responsibility of the web.

/Len

Simply cause a system is trunked does not mean that it is encrpyted.
That maybe the case in some systems but not all. Digital is anothe form
of modulation just like AM and FM

Well, here's WHY that caution is in there...

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 15--RADIO FREQUENCY DEVICES--Table of Contents

Subpart A--General

Sec. 15.21 Information to user.

The users manual or instruction manual for an intentional or
unintentional radiator shall caution the user that changes or
modifications not expressly approved by the party responsible for
compliance could void the user's authority to operate the equipment.

And the primary rules, which, you will note, state that OPERATION of any
device required to be certified, etc, under the Part 15 rules (And scanning
receivers specifically must be certified) is prohibited without a seperate
individual license to do so, in subsection c, if you void the certification
by modifying it.

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 15--RADIO FREQUENCY DEVICES--Table of Contents

Subpart A--General

Sec. 15.1 Scope of this part.

(a) This part sets out the regulations under which an intentional, unintentional, or incidental radiator may be operated without an individual license. It also contains the technical specifications, administrative requirements and other conditions relating to the marketing of part 15 devices.
(b) The operation of an intentional or unintentional radiator that is not in accordance with the regulations in this part must be licensed pursuant to the provisions of section 301 of the Communications Act of 1934, as amended, unless otherwise exempted from the licensing requirements elsewhere in this chapter.
(c) Unless specifically exempted, the operation or marketing of an intentional or unintentional radiator that is not in compliance with the administrative and technical provisions in this part, including prior Commission authorization or verification, as appropriate, is prohibited under section 302 of the Communications Act of 1934, as amended, and subpart I of part 2 of this chapter. The equipment authorization and verification procedures are detailed in subpart J of part 2 of this chapter.

That's ok we can argue all we want about keeping the code test, but something needs to be done to bring people into amateur radio not keep them out. Soon enough all the brass pounders will be gone and then the FCC can sell of the rest of the ham spectrum. How soon we have forgotten about 220 MHz.

> Don't talk down the PCR1000 just because ICOM is a bunch of greedy assholes.

I wasn't following the thread...and since no one quotes the original
message anymore I'm not sure what the original comment was but it sounds
like someone was bitching about the software for the Icom PCR-1000 and
100. Just to let you know....Scancat gold now supports *Both* the 1000
and 100. If you don't like the Icom program then try the free demo of
Scancat.

BTW...I just got my PCR-100. I bought it off this newsgroup and love it.
I have owned more scanners/receivers than most people have seen and the
PCR-100 is by far the best.
Even over a AR-8000 or AR-2500! I can't wait to take it portable with
the laptop. The spectrum scope is the best feature of all...I will never
be able to live without it!
I can't wait to get my hands on its big brother...the PCR-1000.

This is the Phillips DC-777 and is as new condition. It comes complete with all original hardware, manual and box. The unit has never been mounted anywhere.
The receiver is a standard size in-dash radio unit.

It features a auto-reverse cassette player with 20 memory stations, digital frequency select, direct band access, and scan. It even has full stereo controls such as balance, treble, fade, and bass. This is truely a beautiful unit.

Asking $450 shipped to lower 48 States.

Len:

This situation with ICOM and the PCR-1000 series has been known for some time. As a result, several users have put in a lot of hard work into compiling a documented command list. I have such a list, that I could email you, if you'd like? I can't take any credit for it, but it is public information, so I'd be glad to email it to you. There are also several third-party programs that have been developed for the PCR series, so it's not impossible. What type of functionality are you trying to implement?

I can't help but wonder what hams debated about 50 years ago? The internet
has allowed us to exchange ideas and thoughts in an almost instananeous
manner, sometimes I also wonder if this is good or bad :-/

A sensible take on things I'd say.

I've made the suggestion before, and I'll repeat it again -- for those concerned that removing the CW requirement will turn ham radio into another CB circus, the solution is to retain the CW tests at each code speed, but offer a corresponding optional written test that can be taken instead. The questions on this test should focus on good operating practices, technical knowledge from the next licence grade, emergency and net operating procedures instead of just FCC rules and regulations. I know the FCC doesn't regulate some of these areas, so perhaps HAMS would write these tests with an eye to what they want all hams to know. :)

>am a no-code tech.

I suspect that even if the code requirement were abolished tomorrow,
this attitude would persist for many years to come.

CW is almost an aesthetic pleasure for some, who can't imagine that
there might be those who would not thrill to this rather amazing form
of communication. And of course, hard-core DXers and QRP'ers will
remain around forever. CW may never die, regardless of technology.

This sounds a little too much like a conspiracy theory to me.
Do you guys have any idea how much computer time this would take up?

Even the current Cray II (rev2.19) cannot keep up with the amount
of network traffic, let alone do a keyword search on every document
passing through it......

Besides, with the availability of strong encryption for the masses
(PGP),
it may become infeasible for the government to even begin trying this.

Hawke

>Has anyone used one of these very good looking airband scanners? Is the
>sensitivity as good as quoted? Find details at

The AR-108 is an excellent little Airband receiver in terms of receiver
performance. Like many of the "micro" receivers around now (IC-R2,
COM510 etc.) their performance is excellent.

It is a perhaps little awkward to drive but like many sets once you in
the swing of things no real problem.

The downside of the set though is the "delay" which can be varied but
results in the set stopping on a channel for the delay period regardless
of the length of the transmission.

Cheers,
JC

Again, Mark, you lack reading comprehension. I made no claim regarding
morse testing when CW was the only mode. Morse testing was required
when I was first licensed in '63 and it was required when I passed the
Extra exam in '77. You've asked if I deny that the world operates at a
faster pace than it did years ago. Yes, I deny that times passes any
more quickly than it did eons ago. My perception of it might be
different. Your days are as full or as empty as you wish them to be.
Asking a guy who travels the globe for a living if he gets out at all is
pea-brained.

> all others makes you look like well a thief, a bigot, and indeed to me
> down right unamerican even antiamerican. It is all a mater of point of
> view

It's a mother of a point of view, alright. You seem to claim rights not addressed by the Constitution. You have no birthright to an amateur license at all. No one does. You have no HF access because you haven't passed the exam. I have them because I passed the exam. At various points in time during my nearly 36 years on the air I've held only partial HF access when I held Novice, General and Advanced Class tickets. Now, as an Extra, I have all the FCC permits. Did I know somebody or bribe somebody? Nope. I passed the exams.

You are right about your looking silly to me. Yes, I refuse to admit usurping "your" airspace. Your ridiculous claims that I'm a thief or bigot or calling into question my patriotism make you look more pea-brained than the "do you get out at all?" query.

We could the HF bands? Mr. "Could contribute" won't you shake hands
with Mr. "If". "If" is a mighty big word for one who hasn't obtained
the license. If we had some meat, we could make sandwhichs (if we had
some bread).

Well, need to upgrade my shack.

The AR5000 looks good, but it has been around for quite a long time.
Will they announce a new gear, day after I placed my order?

Thanks, if anybody knows about their product policy,
keep us informed?

Bullshit. I suspect that lives were saved by Ham radio within
the last 48 hours here in the US but it was not based on Code skill. I
know that hams were ready to do the same here in Illinois

What has happened with code is a reflection of todays society instant gratification culture mixed with a dumbed down educational system. I agree that in commercial communications code may be obsolete but one of the most important duties of a ham radio operator is to help and sometimes be the only emergency communications means. Under heavy interference by other services or even in low power, code still remains an effective means of communications. I cannot see the problem in learning code except that of a little extra effort. Maybe 13 WPM should be the maximun requirement for the upper licenses. It is true that hams are no more in the forefront of technological developments in radio communications but we still remain as a viable reserve of trained radio operators with knowledge in the radio communications field well beyond that of the laymen.Nonetheless, if the requisites for licensure continue to be dumbed down to a ridiculous level, we will just as well merge with the already chaotic 11 meter band which is our best example of what happens when some controls are not present. Some insist that ham radio has always been elitist because of its requirements.In reality ham radio has been blessed with people from all walks of life and all the socioeconomic levels. The common factor has been a real interest in learning the minimun technical and communication skills and putting up that little extra effort to just do it.

Come on, guys! I rember how
Carl and Jerry used CW when
their car went into the ole
ravine, and the following
month when they lost their
prop, they sent spark-plug
CW off'n the Evinrude, and
the following month they
used a reflective belt-
buckle... and...and... don't
youse 'member? Sheesh!

You saved me from responding directly!

This is ridiculous.

Both sides are spouting bullshit now, and trying to get the issue to
black
and white, on and off, left and right. Neither side seems to grasp the
truth of the other side, and that 99% of the people are not at the
extremes.

CW is useful.

CW is neat.

CW is fun.

CW is NOT a lid filter.

CW should NOT be a gating factor.

CW should NOT be required.

Exactly!!

But how much CW was useful or used?

This arguement is 100% for the elimination of CW as a requirement. If
it's strictly a question of providing trained operators for emergencies
(a VERY valid arguement) then CW should GO IMMEDIATELY. Numbers
of properly trained operators is NOT provided by blocking out otherwise
desirable people with an artificial gating factor.

And I know, CW skills teach proper traffic handling techiques. That I
will agree with. CW operators DO know how to 'share' a spot in the
spectrum, and CW traffic handlers SHOULD have the techniques
and operator awareness to operate in a congested traffic situation.
But that's BULLSHIT to apply it to traffic handlers today. Not when
packet is much more efficient in an emergency. Or voice when
used properly. The days of a CW operator holed up being a link to
the outside world disappeared a long time ago. (Unless the Russian
and Chinese missles all fire on Jan 1, 2000.)

And (I'm ready for another flame war here!) todays traffic operators
are a farce. OK, 99.999% of the operations are a farce. I hear ZERO,
ZILCH, NADA traffic handling on simplex. They squat on repeaters
to run their traffic nets, and have little or no training in simplex
where
they need to develope skills and most importantly operational attitudes.
If an emergency really hit, and the pool of local repeaters was reduced,
(heck, even it they didn't loose a single repeater) those that 'stayed
up'
would probably be immediatly restricted to emergency service. So
what are the traffic people going to do with their flood of non-critical
health and welfare messages? Panic and break down, that's what!
They're spoiled by the low turnouts and light load on their repeater
traffic nets, and the discipline would crumble in a heavy traffic load
on simplex.

Now wait a minute, tubes can be justified. Much more easily than CW.
(Can you tell I own an old Swan?) Tubes are still the only practical
way
to get into the mega-power arena easily. Solid state amps over 100W
are just too fragile....

I'm not saying everyone should know how to design tube projects, but
they should at least have a basic understanding of tube theory. Then if
they need to do anyting with a tube, they look it up in a book. (I may
get flamed for that, but hey, I still look EVERYTHING up when I design
something. My old TI TTL Data Book is falling apart from use!)

>and that some folks feel they "deserve" an amateur license
>with no effort on their part.

I do not think CW is without it's applications. It is obsolete in
the sense that it is not nearly as important as it once was, it is by far
not the only mode on the block. But it is not nearly so obsolete as to be
without a number of applications where it does the job just fine.

I would even go so far as to say that there should be at least
some bands reserved for CW !

Where I differ is where I see CW's place.

For example, to get a higher liscence, your code has to be faster.
Code speed is just not important enough anymore to be a deciding factor in
giving a higher level of liscence.

Thanks for taking a moment to remove the personalism that is the
biggest threat to Ham Radio today.

In a previous article, willee@interconnect.net (William Lee) says:

>Trent, It sounds like you are very happy as a SWL. Why do you want to become
>a HAM if it is:
>1. Impossable for you to learn code.
>2. Too expensive to get a CW waver.
>3. Too much greif and insults from other hams.
>4. Full of other people who are Fuddy Duddy's.

Well, I wanted to experiment with some ideas I had for HF.

>
>Man.... why dont you stay a SWL and forget Ham radio?

Forget it ? Who was it that brought this deabte into the SWL
newsgroup anyways ?

>Or do you think it would all change if someone would just GIVE you a
>license.

This is a personal argument. When a person cannot debate the issue
at hand, or rather, is unable to, they start to sling mud.

I know more than enough about electronics, I studied on my own.
Noone gave me what I know, I had to go out there and learn it. I guess if I
don't see things the same way, I am lazy.

A late friend of mine told me that when the other side of a debate
slings mud, you have won.

Thanks =-)

Is there a reason for this thread to be cross-posted to a scanner NG.
Someone explain the relevance.

Unless they used the exact same model #, I strongly doubt that your radio
is a Emerson.
Most likely, your radio is actually a Sangean.
BTW, if your unit covers 150 Khz-29.9 Mhz, then your radio is already full
coverage.
Mods seem unlikely(at least for coverage anyway)-but other mods do
exist for the 803.

From: Knut Otterbeck <otterbeck@c2i.net>
Message-ID: <7go274tt1@romeo.dax.net>
Source record: 119926

I think the tape jack only functions as an on/off signal intended for
the tape-motor to be turned on/off. It either brakes the loop/current
that goes thru it (recorder off) or it connects the loop (recorder on)

A purpose-built recorder has a connection with a similar tape jack.

If you dont have a purpose-made recorder ,just use two wires out
of the OS456-jack to connect to the negative power cord of the
recorder (only if the recorder uses 12Volts or less)

Please arrest me if I am wrong ,but I think that is how it works.

And nobody is advocating that you not be allowed to do just that, Richard.
Nobody is talking about eliminating CW - just about eliminating Morse
code testing. Do you think that CW is such an undesirable mode that nobody
would continue to use it after the requirement is dropped?

Mike,

I must agree with you, although I don't agree with your predicted outcome. I don't know why CW is required. It just is. I think I understand why CW has its own sub-bands. It doesn't matter, though; it just IS. We think we know the why of band allocations, and power restrictions. It doesn't matter; they just ARE.

I don't know if learning CW makes you a better ham. I don't know if the rationale for the rule is simply to make sure you can read and follow a rule. I don't care; it just is.

Learn the code; don't learn the code. I don't care. It's not my rule, and I'm not the enforcer. Even if there is no other reason: you read the rule; you complied with the rule; you passed the test. See how simple?

Turn a new leaf; make life easy for yourself. Fat, dumb, and happy are the watch words for today.

Michael.

Yes, it is working as designed. A trick I learned here which works in the
car w/ a cassette deck is to connect it via an adaptor that looks like a
cassette, but has a wire coming out of it with a stereo jack that plugs into
the earphone jack. You can then play it as loud as your stereo goes.

I use a 12V sealed lead-acid alarm battery to power my 895xlt and 2026 scanners which are designed to run on 12VDC and 13.8VDC respectively. In your situation, I would look for the same thing only in a 9VDC package (I'm sure there are some out there). You'll also want to make sure the battery puts out at least the same amount of amperage as the wall plug, or else your scanner will run for about 5-10 minutes and then quit. The battery I purchased puts out about 600MA. I'm guessing (read it again, GUESSING, so check the specs of your scanner and be sure) that you'll need about 300-500MA for your scanner.

Here in Phoenix we have a chain of stores called Batteries Plus, which is where I went for mine. The staff there was very knowledgeable and recommended a perfect setup for my radios, which included a special floating point charger, designed to keep the battery peaked so that it can be left plugged in at all times without overcharging the battery. You will want to get something like this as well. The whole setup ran me about $30.

And, to those who like to make wild assumptions on the group, no I don't work for them, and I'm not being paid to write this. I'm just a very satisfied customer, who gladly recommends these guys to others.

-Phil

Thanks Neal, I did find the source code I was looking for.

How does one subscribe to the trunker list? Is it at onelist, or someplace
else?

Thanks again,
-Phil

Its called part 15.

Modifying a scanner can have serious side effects (such as producing unwanted spurious emissions strong enough to interfere with vital service (in case you don't believe this, I have encountered some problems like this with a neighbor who had a modified scanner planting a spur right on the police band input frequency for their 450 mhs machines here).

Yes I have.
However, it is still not cost effective to be blowing 7.5 million a piece on a bunch of crays.. Even I know that most admin types in government are not smart enough to know how to do this on cheaper (and more cost effective) systems....

>> I've both e-mailed this "reporter," <<

Now do you really want to take a chance that some hack will totally distort what any of us say, just in order to "prove" the point he or she already has in mind? They can distort the facts quite well without our help, and my experience has been that explaining anything even remotely technical to a person who has already made up their mind not to learn anything technical, is another waste of time. Good luck with the judge, too. This might even be a police or prosecutor sting, for all we know, even though they aren't supposed to pose as journalists.

Remember the story in Newsday, where the feds made a big deal out of the suspect having several satellite dishes in his back yard? From 18 inches to several feet? Plus a tower? A reporter wrote that.

And remember how the suspect was accused of intercepting MDT traffic?

Now, you tell me how ANY satellite dish has anything to do with that, or how having a tower makes a person a criminal, or how all the rest of us with 18" satellite dishes that receive DirecTV are criminals. Yet, to read that article, written by a reproter, you'd sure think that something illegal was going on. They don't know the details, and they don't care about the details. They either care about putting x number of words on a page to meet a quota, or getting some fancy headline. Never mind how many innocent people get burned. That's not their problem.

Taking a mess and trying to make it better, especially by using truth and technical expertise, only makes it worse. The news types want splashy headlines. Do you watch Bill Kurtis on A&E? Everything he says sounds like the breathless truth, yet when you analyze it, it is nothing more than common, ordinary facts, usually twisted to "prove" something. Think the Jerry Springer show doesn't use this same forumla? Thing your upbeat local giggling insipid local TV news teams don't use this formula?

About the only sources I even come close to respecting are NEWSWEEK and TIME, as they do seem to research their articles better. Being a weekly, they have the luxury of time. The daily papers and TV stations are always under dealine, so they have a limited amount of time for the truth. And they learn early on not to worry much about that.
And the average person will be more likely to believe what they read in the paper, or see on TV, than what you ro I would say in person.

Forget about this so-called journalist.

OK, I'll bottom line if for you. After having owned one myself, and I have been a hobbyist in this and the shortwave area for 35 years, put simply, I feel that it is a GREAT CONCEPT but nothing more. It definitely falls short in the actual performance area. I consider sensitivity the real acid test for a scanner and it doesn't do it well. I feel that the switches are cheap and have a chintzy feel, not that of quality like that of the Icom IC-R2 and the Yupiteru product, all of which run rings around the 8200. I suppose more and more folks that went out there and were dazzled by the utter technology showcased by the 8200 are not disenchanted with the actual performance. I too have gone down this road.

If eliminating a Morse Code requirement would turn Ham radio into
another version of CB radio, it would have already happened on all bands
6 meters and above. The truth is, the parts of the Ham bands that sound
like CB are in the code required HF sections. CB is in the HF bands.
HF and AM radio attracts a certain kind of person, Morse Code has
nothing to do with it.

Actually Ham radio has always assisted in giving communications to
national disaster areas such as Earthquake, Flood, or Tornado disasters.
However, Morse Code is never used in these instances, mostly voice on
the 2 meter band.

No, I don't think I said that at all. I said that my mind does not have the trick of learning morse code. Never could get it as a kid...although I've been having a little more luck lately what with the advent of really patient computer software. The test was the impetus for attempting to learn it because at that point in my life, there were no options...you had to know code to be a ham and I desperately wanted to be a ham.

561. pro-60 question...

Newsgroup: rec.radio.scanner
Date: 1999-05-06 00:00:00 UTC
From: Jeff Gross <jtg3592@ksu.edu>
Message-ID: <37325A08.464A97FC@ksu.edu>
Source record: 119612

Hello,

I was just wondering about something the other day. I bought a Pro-60 handheld scanner from Radio Shack 2 or 3 years ago when they were closing out for 179.99. I love it to death and use it a lot for military aircraft listening. I noticed that RS doesn't make the handhelds with milair capability anymore. I'm not sure if they have any base scanners with milair. When I bought it, the salesman tried to get us to buy the 5 year warranty that covers everything. It was another $50 but when he said he'd add another year to the warranty (now 6 years) I went ahead and bought the scanner with the extra warranty. Not a thing is wrong with my Pro-60, thank goodness, but I was just wondering what RS would do if something did. When I bought it the manager said if something goes wrong that they can't fix, they have to upgrade your scanner and it will include at least the capabilities of the previous one, if not better. What would RS do since they don't make handheld's with milair. I already have a base scanner, so I sure wouldn't want another. And I use the Pro-60 mainly for milair... This kinda makes me wonder. I sure wouldn't want to settle for less and I don't think anyone else would. Of course, if that happened, I wouldn't mind a 3000XLT (I think that's the nice handheld that bearcat makes, right?) but I doubt they could do anything for me. Would I just be out of luck? Anyone have any experience with something like this? I wouldn't be a happy camper..... Just wondering.

Jeff

Based on the results I had that is insanity. I lived on the West Coast over the Coast Range of mountains 2 blocks from the Pacific Ocean. It was the highest performing antenna I tried over several years and that includes several expensive discones, both of the Diamond Stick preamped antennas and others as well. So without a doubt it is the best out there as far as I am concerned. The 50 dollar cost is a real bonus as well. I think it RULES.

All of the above is true-but I think I see a big hole in the above...
Hams are allowed to use non-type accepted gear(due to the rules allowing
hams to BUILD receivers AND transmitters).

So it would appear that if a person wanted to be totally "clean", all they have to do is get a ham license(not as difficult as you might think), and then a modified scanner would be ok(at least as far as type acceptance goes).
A CMT mod might still be questionable under the latest act of congress however.

Sorry, but you don't, at least not with that scanner. What you want to do
is "search" a particular frequency range and your scanner doesn't have an
automatic search function. The radio is a very basic one, without any advanced
features, including a search function.
In the future look for radios with a LIMIT key. The LIMIT key is used to
set the upper and lower search limits, i.e. 148 to 174 MHz.

Actually, rather than being exempt from type acceptance rules, hams are
authorized to issue type acceptance certification, for operation on amateur
frequencies, for equipment they construct.

Take your choice -- violate the rules by operating uncertified equipment, or
by issuing false certification.

Source record: 119648

Use a battery with same amount of voltage as required in specs of
scanner. Check your manual for voltage requirements. My BCT7
uses 12 volt (positive center) lighter adapter in car, 12volt "walwart"
(positive center) so I use an old 12volt burglar alarm battery as backup
that I recharge regularly. My R/S DX390 requires a 6volt 300m/amp
"walwart" (negative center) on the connector. So, BY ALL MEANS,
check the polarity on the pin plug and polarity requirements on your
"radio" before connecting it up to an external battery source. You may
be thinking about amperage, not voltage. A minimum amount of amperage
(usually 300m/amps) is required. More ample amperage is not a problem.

I am one of the ones who has way lots of trouble catching on to Morse Code and as a result may never progress beyond Tech No-Code. However, I don't want to see the CW requirement go away, because

a) It will still always be a goal for me. I've always wanted to know a secret language shared by only a few people. Too many books and movies in my wasted youth, I guess; and

b) I don't see how Ham Radio will benefit having an influx of people with your attitude and manners (not, mind you, that there aren't a number of the Code people who can use a refresher course in manners).

Jack,

Brass pounders will always be around, and in large numbers too. As for new blood in Amateur Radio, there is plenty of that too. Where did the notion that Amateur Radio is dying come from? At my extra class exam (recent) there were about 5 youngsters aged about 10 taking the 5 WPM code test. Come to think of it, there were kids testing at every one of the test sessions I attended.

I think we need to worry more about the F layer falling.

That scanner can't do that... If you'd found the upgraded version that
Uniden put out, the 60XLT-1, that one can search frequencies and also
has 30 channels. I have one of those and it works pretty well.

Here's something else to be considered. Repeater stations, both amateur and commercial, identify themselves in Morse Code. How can you know you're using the right repeater, if you can't identify it because you can't read the repeater's slow Morse ID?

For that matter, on HF, how can you tell which CW station is interfering with you, if you can't read its call?

Is it possible that there are other legitimate NEEDS for Morse Code yet to be found?

Chicken Little is an old tale. No one learns. Seems folks are always the same.
Thank you for an independent observation.
I suspect the same small fraction of 13 year olds are still learning code. Like many things that require a little work up front, CW is worth it.

Message-ID: <7gsebn$38s$1@nnrp1.deja.com>
Source record: 119663
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I recently decided to get a Pro-90 for the trunk tracking capabilities. One of the systems that I want to listen to is a MotorolaType I system, and I have the Fleet Map info for it. The problem is, the directions do a poor job of telling you exactly how to program the fleet map in. They don't tell you where to start from, and I have tried everything that I could think of. They tell you to "Select the bank where you want to store the preset fleet map by pressing a number key". Great, so I have tried pressing the bank (0 in my case) from scanning mode, truntracking mode, manual mode, everything I could think of. When I went to steps 2 and 3, data doesn't do anything, and then the up and down arrows also don't respond as it says they should. Maybe the answer that I am looking for is completely simple, and I somehow managed to miss it, I don't know, but I would appreciate any help that anyone could offer me.

-Dave

P.S. I apologize if this message shows up twice, I am at work, so I had to use Dejanews to post.

By using an HDTV convertor with your digital cable box.

I see only 3 in the last week or so ... (quite a few???)

Reasons for selling your $550 radio soon after buying it ... ;-)

1. You couldn't really afford it in the first place and need the money. (or
wife leaves you)
2. You're new to the scanning scene ,saw all the good stuff about the 8200
bought it and don't know how to use it and got quickly bored.
3. You're a more seasoned scannist and decide that you really need the $1600
desk top unit after all.
4. you bought it to listen to NATO war planes on HF and discover it can'r be
done on a rubber ducky.
5. You saw a promising report on a competitive unit and 'JUST HAVE TO HAVE IT'
instead.

apply liberal smileys ;-)

Marv OM,

I agree with you. I don't see ham radio 'dying' at all. I operate in excess of 12 hours a week on the air, basically all CW. Over half of that is mobile CW. The CW bands have plenty of ragchewing going on all the time. I know, I am one of them. And I spend almost all my time on only one band: 40M. A while ago I worked a 16 year old in Phoenix who was running homebrew TUBE-TYPE gear he had made himself, from old handbook articles. Said he just wanted to play around with tubes is all. Have worked several newer hams, some in their teens, who started with codeless techs, then discovered (some to their total amazement) that CW is an excellent ragchewing mode, and works very well. Some are excellent CW ops, know procedure, know how to listen, with less than 2 years experience in ham radio. They try to spread their enthusiasm to some of their non-CW friends, often with no luck. So they go their own ways.
The message here? You are either interested or you are not. Nothing new going on here. CW will continue to be used by the many who find it enjoyable, that is, can attain reasonable skill at it. Apparently many non-cw ops think we are all WORKING to use it, writing stuff down, using straight keys, egad! Hey, it is just another language guys, if you are proficient, and is effortless to use. If you're not wired for it, there are many other modes to use. That is one of the beauties of ham radio.

73,
Don, W6JL

I'm sorry, but this is REALLY getting lame. If the pro-coders depend on arguements like this, then HAM radio is not only going to go no-cw, but we'll loose the CW subbands as well.

That is the point. There are many modes that don't use CW. Many that are interesting and satisfying that don't need knowledge of CW to use. The hobby is diverse and growing more so all the time. Yet there is truly only one test for suitability to belong to the club: knowledge of code.

I have the skill to pass the practical test (and have with the training software) through Advanced, yet I hold only a Tech ticket because of the code. I am still trying but I haven't found my method for learning code yet. I memorized the tapes, and have tried a couple of different computer tutor programs, but so far I have not been able to master CW. I will get it eventually, but it is not coming easy. I resent comments from other hams about being an "appliance user" or the comments on this list about code being a "moron filter." We all have assets in different areas. Learning the code is just plain a bitch for me, and is for others.

I see Techs filling key spots in many clubs, taking on important jobs in weather nets, coordinating public service activities and the like. Some of these folks will upgrade, and some will not. The code will be an obstacle for some, the practical test will be an obstacle for some, and some are content with what they can do with their current ticket. None deserve to be looked down upon because of lack of code speed.

Can anyone tell me if they are using their 800 system in conventional mode? I will be traveling RT. 95 all the way from exit 2 to exit 97. I am curious if they are using 800 conventional yet?

Thanks
Mike KC2CYE

A good antenna for a roof mount if you want to drill a 3/4" hole is a MaxRad MHB-5800 High Gain / High Band. it has a long antenna about 40" and is good for high band/low band and 800MHz.

A good cable is RG58 A/U or Belden 9913. You can get both items at a good 2-Way Radio dealer, preferably one that does Police Vehicles.

Good Luck!!!!!!!!!

The Icom is widely available for only $219.95....It is clearly a best buy situation. It has a bit of intermod in the 450mhz range. It's sensitivity is unreal in the 30-50, 450-520, and 850-867mhz ranges... The audio is incredible and of course the size will make you fall in love with it. You need to get your hands on one and see why it is one of todays best sellers. For what it's worth, I have tried just about every BNC and SMA antenna out there and have found the best overall performance, especially from 100-1000mhz is the Watson 881 with a SMA to BNC adapter.

Some software (e.g., Morse Tutor Gold) is pretty effective, in that it sends typical, but random, QSOs. Of course that may be boring (many qsos are!), but it is better than the old 5 element groups.

Figures it would come down to cell fones & cordless. JTW got it right! The usual liberal "dumb it down" stuff. Did you tell him to contact Tauzin about how he was "protecting" cell fone users from folks like us with those nasty scanners?? Or how Bob Grove got attacked/ambushed during that Senate hearing? No he's not interested in that or our hobby, just some titillating I didn't know they could do that stuff, probably featuring some kind of geek/nerd with a scanner. Ya'll should have seen that a comin' down the coax!

Doesn't the program zip file include a .gif of the circuit? I believe the POCSAG program & others include gif's of the slicer circuits. The 2 level Hamcomm slicer/converters are cheap & easy to build. This month's Monitoring Times has an article by Bill Cheek for a 4 level slicer for MDT. He also wrote several articles in MT on 2 level slicers.

It is if you triple encode it and then use a nonstandard encryption on top of that.

Secret codes are harder to break than you think, and the governments happen to be the easiest to break.

So you think..

Forget not the mistakes of history, or you WILL be doomed to repeat them.

Take a good look in Germany between 1927 - 1933. similar things were happening there and suddenly a lot of people not only lost their freedoms, but pretty soon afterward, they started losing their lives.

Government is already too large for us to manage.

The manufacturer used to suggest that if it was mounted (halfway up???) a metal mast some directionality might be experienced. The antenna would then be positioned (rotated on the axis of the mast) so that if was in-between your desired "target" and the support pole. Naturally, with a PVC mast you won't get this effect. Makes sense, but the effect won't be very dramatic anyway. As others have said, it's essentially an omni design.

Some of you are missing the point though - discones are't "gain" antennas. Any antenna offering any gain in a particular portion of the spectrum will out perform it. Or, in this case, one that offers gain in multiple bands. The monitenna and similar scantenna are both great general use scanner antennas. If one really tuned all across the spectrum, you'd find spots where the discone did better. But I agree, for public safety they are great. They even work pretty well for VHF and UHF aero, too.

On the other hand, unless heavily reinforced, neither will hold up to the kind of weather we get in Chicago. My diamond discone has not only survived lightening strikes, wind storms, blizzards and hail, but intentional vanadalism as well. (Built like a rock!) I've been through 3 scantenna's in 6 years. (My discone is 7 years old). The scantenna I have now I reinforced all the snap joints using heavy cable ties and fiberglass tape. Happy Scanning - Ted

It looks good, but you have a bit of a problem at resolutions less than 1024x768: The text runs over into the side border. Being a web developer by trade, I've seen this happen alot.

It's easily fixed though. Insert a column into your table that's about 5% wide between the menu column and the content column. Then set the menu column to a percentage instead of a fixed pixel width, say 25% (you'll want to experiment from here.) Then set the content colum width to 70% (or whatever 100 - the menu column width + spacer column width turns out to be.) The page should then be viewable at any resolution, and have some pleasing looking white space seperating the menu and content sections.

Still, overall it looks great, a lot better looking than the average scanner site usually looks! Good job!

> Mayville, Wisconsin

Hi Keith OM,

Thanks for the thoughtful response.
In WWII, the military taught Morse code to literally thousands of people from all kinds
of backgrounds and abilities. Many of them were not doing it voluntarily, either!
I myself cannot see where using "tapes" and "computers" is an effective learning method
for learning to use the code conversationally, as we do in ham radio. First of all, it
is boring, listening to basically boring content being sent. As you said, you eventually
memorized the tapes. That should be a clue that that is not the way to learn the
code. Why not listen to something interesting instead?
To become comfortable with CW, you have to 'USE IT' for some purpose. Listening to real-live
conversations on the air is what made CW take off quickly for me. Fortunately, in those days
there was no distracting temptation to somehow 'use a computer' (a distinct advantage, from
what I can see). Second of all, it does nothing to teach you how to listen to REAL
WORLD signals off the air, while at the same time, you are internalizing what is being said.
This is what worked for me. It has been music to my ears ever since, and is definitely my
preferred mode for ragchewing on the air, compared to using voice. When you are otherwise
just wasting time (ex: while driving), sound out everything you see

written: street signs,
license plates, etc etc. Make the sounds of CW very familiar to
yourself, so that
you associate those sounds immediately with the letters and numbers and
punctuation.
This all requires zero investment in $$, and can be done anywhere,
anytime. Lastly,
listen ON THE AIR to real CW QSO's, as much as you can, to all kinds of
fists, in various
conditions of in the clear to buried in the QRN/QRM. Watch out! You
might suddenly
become hooked; that is a risk you take. If that happens, you will
suddenly see yourself
on the other side of the perennial code argument, and can't for the life
of you figure
out what all the fuss is about; it has happened to many others, HI.
Lastly, like anything else, CW is not fun for EVERYONE. Some people
just do not take to it.
But that is a very small group indeed, I think. Especially at the
moderate speeds required.
After all, 5 WPM you can practically look up real time. 13 WPM actually
requires that you
know and can respond almost immediately to the characters. This does
not seem to much
to ask, for a large number of us. I believe it is an essential part of
one's education
to become a ham and to use HF (the 'real' ham radio to me).
You can do it.

If the crime is to manufacture, mere intent is insufficient. One must produce evidence that the manufacture took place and that the accused was the manufacturer.

But Zeke surely knows this because ...

> PGP is NO problem for [NSA] to decode.

... Zeke is a FUDster, and like all FUDsters, Zeke is full of shit.

Keith,

I forgot one other important point in my post. DON'T WRITE STUFF DOWN. Copy it in your head; that is how you will be using it for ham radio ragchewing. Writing it down is an (unnecessary and limiting) habit that you don't want to get into if you can avoid it. I sometimes run into ops on the air who ask me (as I am working mobile CW) "how do you write it down?". Egad.

When I was in the military they used to pound 5-letter code groups into your head 8 hours a day, 5 days a week for months on end. At that rate, you could copy in your sleep. After passing a military test at 35 wpm I nearly flunked 13 WPM in front of the FCC. The FCC wouldn't send 5 letter groups, they wouldn't let me use headphones, and they made me write it down with a pen and paper, no mill (typewriter). Took some on the air time to normal conversation.

So maybe we need a Ham Radio Boot Camp to force people to learn the code. Lets see.... we also need a typing test in case the new ham wants to use a keyboard. Two actually, one for the computer keyboard and one for teletype machines (you never know when one of those mechanical monsters will be only communications available). Almost forgot, a speech test in case he wants to work SSB or FM. :-)

Or.. how about we just give a written test on basic theory, regulations, and accepted operating practice?

I'm just curious how you guys REMEMBER all these scanner commands?

I own several different brands and depending upon my destination, I might pick up the Icom, Yupi, Welz, Trident, Uniden or Pro26. ALL OF WHICH HAVE DIFFERENT COMMAND SETS!

The commands are very consistent amongst brand names (all Uniden and RS work alike), but once I get accustomed to the Uniden, I forget how to search with my Welz, or Trident. ARGH!

Here's an example:

Uniden search: manual, freq#, LIMIT, freq#, LIMIT, search
Trident search: func/S.Prog, bank, freq#, freq#, mode, step

Icom R2 and my Welz are EVEN WORSE since they have limited keys to work with. So my question is: How can you possibly remember all this stuff?

What I don't understand is why we all wait for the commercial world to create the first digital scanner. Uniden says they have no interest in it, and I expect that many of the other companies here may also be intimidated by Federal posturing and Cellular special interest groups. Aren't many of us on this group employed in technical fields, with various professional specialties directly related to communications? Much like the Open-Source movement that propels Linux, we should have a cooperative movement working towards foiling digital sytems that threaten our hobby. After all, how many people can it possibly take to design a scanner, such as the Trunktracker when it was new? I'm sure that many of us have the same (or more) degree of professional experience and competence. And even if it's distantly related to the field you are in, why not try? For instance, I, with a degree in English, am able to teach myself various programming and computer related skills so that I can compete and succeed in my field, Internet gaming production. There are people out there that have been innovative enough to create programs like Trunker, POCSAC, Etrunk, etc., and the hardware interfaces to go with it like the HamComm. So what's the problem? The commercial world has let us down.... Let's form a Digital movement, make it public, open-source, and available. If manufacuters here won't make the equipment, send the research overseas, where apparently they still believe in making what people want (and have a right) to buy.

A few days ago they did a new story talking about finding the body of famed
Athiest Madely Murray Ohare near San Antonio TX.
They are still looking for her body (if she is dead -they still do not know)
But they showed FBI agents talking on handheld radios.

The radios they were using had distinctive very long rubber floppy antennas
on them. It looked most definetely to be low band.
Or something lower than 150 Mhz. Does anyone have any info on what
frequencies they might be using and it if is analog or digital.

All,

I spent more than an hour today (his dime) talking to the reporter. He's working on an article for "Details," magazine. I've heard the name, but I'm not familiar with it.
The mag's editors basically want to zero in on the "sexy stuff," you know, listening to cellphones and such. How many people do it, and why?
Basically, I told him that only folks who didn't develop fully emotionally and have little or no social life of their own listen to cellphones and cordless phones.

You have to understand this industry. It's highly competitive and companies like Uniden, GRE and others treat their new projects and related information like government secrets. Just because they *said* they have no interest in such a project doesn't mean they aren't looking into it. They just don't what the competition to know what they're up to. Generally, any question like this evokes a canned "no comment" type of response.

>Aren't many of
>us on this group employed in technical fields, with various professional
>specialties directly related to communications? Much like the Open-Source
>movement that propels Linux, we should have a cooperative movement working

>to the field you are in, why not try? For instance, I, with a degree in
>English, am able to teach myself various programming and computer related
>skills so that I can compete and succeed in my field, Internet gaming
>production. There are people out there that have been innovative enough to
>create programs like Trunker, POCSAC, Etrunk, etc., and the hardware
>interfaces to go with it like the HamComm. So what's the problem?

Well generically speaking, the problem is that the companies who market digital equipment won't make any money from such a thing, so they'll use their legal departments to sue the life out of anyone who tries. Specifically speaking, so far the only way to take the decoded digital data and convert it to voice is to use a special vocoder board which requires a $125,000 licensing fee to the patent holder just to see a schematic. This leads me to ask "So, who's gonna pass the hat around?"

>The commercial world has let us down....Let's form a Digital movement, make
it
>public, open-source, and available. If manufacuters here won't make the
>equipment, send the research overseas, where apparently they still believe
>in making what people want (and have a right) to buy.

Oh but they do! Anyone with enough money can go out and buy a new digital ASTRO saber and the programming equipment/software from any local Motorola dealer.

Seriously, companies are notorious for denying active projects to throw off the competition. I wouldn't count them out just yet.

Just cos we know what we are talking about doesn't mean we should take the
piss out of people that are (obviously) new to newsgroups. I think that a
simple "sorry this is RADIO scanning" would suffice.

We were all newbies once....

(And no, my sense of humour glands are in full working order before you ask)

CSP will be installing a Motorola digital Astro system starting in the near future with completion by summer of 2000. The contract calls for 98% coverage 98% of the time. The troops closer to NY are supposed to go online first as that is where the most pressure for the frequencies has come from. The state has almost run out of the extention they got from the FCC for construction.

The answer is yes and no. What transceiver? On receive? On transmit? On
both? Your question is too vague.

Just came to visit to see what was
going on in the world of scanners.

Then I saw it.

Then I just wondered if it was
truth or fiction.

Then I will access that www site
to find out more once I find what
book or newspaper or binder or
mag piece I wrote it to....

Video NG is fun. But you cannot
just exist for one group's flames.
Got to spread it around. Even swimming'
NG is flaming me lately because I'm using
the "M" word: masturbation.

seems people are really pissed off at me
because I tell it like it is when swimmers
want to know if it's a good thing to masturbate
just before a meet...but they really came after
me when I said: "ok girls, how do you handle it
prior to a meet?"

the thought that females do it too was just
too much for most to handle. Did they ever
come out of the depths of stupidity to answer
for the girls.

you see, no females took it on and left it up
to the guys to come to their rescue....

i'm thinking of going over to alt.atheist and
do battle with a Catholic priest who thinks
GOD reads his entries....

bill conduit
ain't the net fun.

I tend to agree that for the money, it is a good all-round radio. Lots of features and good performance. It has short-comings to be sure and that's why I'm keeping my Pro2006 and Sony 2010. But when I'm not sure what I want to listen to or where I'll be listening to it, I typically grab the Alinco.

A good choice of dual banders. Yes, the manual explains how to do it. For transmit, however, I believe you need the optonal board TS-22? But that is the way they are advertised. I'm confused why you ask this. It sounds like you have the radio with no manual and have never seen their advertisements. The programming of all functions into memory is quite straightforward.

CW wrote: Public school has obviously taken a toll on your mind if you think the whole point of learning is to take a test.
> CW

Learning comes *after* taking the entrance test. The entire medical school & law school curricula focus is to pass a national board exam; contractor & real estate licensure, and ham radio guidebooks are geared to passing a test. If you want to learn a subject, well..., that comes afterward with further reading and experience. Them's the facts, that's human nature.

BTW, for all of you who pine about the "good old days" and things aren't like they were X years ago. What was your input? Where were you, on the moon? Did you just standby and let things happen? Oh well....

True... Will County, in NE Illinois, was supposedly switching to an "all new digitally-encrypted radio system" in 1998, according to police who, at the time, were still using the antiquated 39 MHz simplex system. I assumed my days of listening to Will Co. were numbered.

When the new system went live, yes, it was a "digital" Ericsson EDACS system, but lo and behold, no *voice* encryption is being used. It's not all that hard to track either, since there is predominantly only police traffic on the system. But the extra four "beeps" are certainly annoying, and if you want to follow a conversation as it alternates through the trunk channels, you have to roll through the channels by hand with the Channel dial.

I dunno Bill. Newspaper journalists are well know for their use of scanners. It's not like they need any technical help. Are you sure he's smart & friendly? I'm skeptical about what he's going to write.

With that sensitivity, did you lose any selectivity? My sensitivity improved with the external antenna I put on my car, but so did the reception of every other signal floating through the air. My 7100 was already almost overrun with interference; with a "better" antenna it was wiped out. Does the IC-R2 fare well at screening out the unwanted signals?

What else do you like about the Icom? I'm gathering as many opinions as I can. $500 is a lot of money on my salary, so I shop carefully.

Thanks,

Dave

Has anyone Downloaded and used the new etrunk 3.7. I am trying to get it setup and having trouble. Do I just replace my old etrunk.exe file in the dir for the different services. Also what are the new features of etrunk 3.7.

Second question, how do I get rid of the constant interference on the data channel. I always end up get an almost digital sound and cell phone conversation bleed through. It is especially bad during rush hour.

Thanks,

Mike

I understand what you're saying; it's a commonly held belief. The thing
that you have to realize is that while reporters DO screw things up all the
time, it's because they're asked to be experts on two or three completely
new subjects EVERY DAY. Magazine reporters have the luxury of taking time
to learn a lot about something before they write; most reporters work on
daily deadlines. Regardless of deadline, just about all reporters ASK FOR
HELP in understanding things. Even when they do get help, sometimes they
STILL screw up. Are you trying to tell me you've never misunderstood
anything anyone ever told you? Some are worse than others. At least this
guy tried to reach someone instead of making stuff up by himself!

There is one type of reporter that is much worse at this than any other:
"tabloid" reporters who work for publications that make money off of not
even caring whether they get it right or not. And while many posters on
this subject have been quick to label ALL reporters as being of this ilk, a
great number of you have also suggested that the reporter who asked for
help here should be paying for your help. What a contradiction! Serious
reporters for serious publications DON'T PAY SOURCES.

Rather than just ignoring this guy because you don't trust him, you've gone
and made scanner enthusiasts look like a bunch of paranoid freaks! How's
THAT going to sound in tomorrow's paper?

yes, put the executable where you can run it.
the new features are the same ones as motorola trunker - the zip file comes with the
moto docs as well. so you need to read both the moto doc which has underlines for new features
then the etrunker document that tells how that version differs from the moto version.

some new features include decoding of emergency calls, the use of up/down arrows to
auto-hold any call, and fixes for i-calls.

Too many times we see the negative postings about somebody who did somebody wrong on these groups. This is not one of those posts.

I recently completed a deal with Richard M. Cash, from whom I had purchased an AOR 8000 receiver. He communicated with me frequently and the 8000 was promptly shipped to me (safely packaged). I received the unit a few days later and it arrived in the very good condition he had described it was in.

Its nice to know there are still many honest people out here to deal with.

Sincerely,

Chris M.

There is no "official" trunker homepage....

But, the closest thing to it is the Digital Signals homepage at
http://web2.airmail.net/lblant1/dfw/digital.htm

I am in touch with the developers of trunker and etrunk on a constant
basis, and function as the focal point for the latest distribution
releases and information.

The source code is included as part of the download. Unzip the
archives and the source will be included as seperate archives.

Have fun!

I just finished giving my seven year old his code lesson. He's learning the code to earn a award in his Tiger Cub Scout group. He is a seven year old that came to me to learn the code, and has no interest in radio, I would think that anyone who is interested in radio should stop crying about it and donate the 15 minutes a night for 2 weeks, and learn it.

No one complains about having to learn how to use windows before they can surf the net....

Well, if you do decide to give up your 7100 or an 8000 or 8200, say goodbye to that legendary sensitivity as they "don't have it". I have had both radios and since gotten rid of them. I now have a IC-R2 from Icom. It is even a tad more sensitive than your 7100 and now I hear things that weren't even there with the others. Something to consider.

730. Updated! Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1999-05-07 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <3737f8c0.5960697@news.cgocable.net>
Source record: 119564

VERSION 4.0.46

You may want to look at this program before the F.B.I. decides that
there is something wrong with it and makes us pull it off the market!

It's now HERE!!
Pro-Turbo
Now has support for the 25,600 channel memory MOD.

Now includes 2 groups of 4 user definable meters! Now you can have
that center tune meter that you have always wanted.

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.

You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to have a look, you can get more information
on the program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

How about someone who knows that the word "scanner" has more than one
meaning? Someone who has a bit of tolerance for a non-english (well,
non-"awsee") speaking/writing person who picked some wrong groups, not
understanding the relationship implied by 'radio'?

Guess all that blood rushing to your head ... eh, mate? <G>

I use the RS Discone with the low band whip added. It does better on the lo and air bands and about the same on hi and UHF. The antenna is in the attic of my garage - about 1 story high. I am in a large metro area and don't have a problem with overload with this antenna.

I have also connected my TV antenna which has a rotor and used it for the FM band.

This is fine as a defense against COPYRIGHT prosecution, but won't be helpful at all if the FCC or DOJ are after you for illegally intercepting MDT communications (if in fact such interception is illegal).

Also, the 9th Circuit gets overturned by the Supreme Court fairly often, so I wouldn't put too much faith in their decision. The 9th Circuit does not seem to show enough deference to "expert" agencies of government when ruling on regulatory issues to satisfy the current Supreme Court's policy.

Too true. It's not illegal to have pipe caps, threaded pipe, or
gunpowder. You could be a handyman who also likes to do Civil War
re-enactments. But heaven help you if you're fingered for a pipe bomb
incident.

Oh well. At least we've established that it's not a problem if you
just want to know how MDT works.

They normally will replace it according to its original retail value (not sale price or closeout price). Since the Pro-60 was the top of the line handheld, I would expect they would replace it with the current top of the line, which I believe is the Pro-90. Unless you have been hacking away at the radio, RadioShack should be able to fix any problem you have with the radio. If they return the radio and say that it can't be fixed, then ask to have it sent to a different repair center and attach a note about it to the repair center manager. The repair techs at radioshack get paid by the job. If it looks like a job will take too long they will just say the item couldn't be repaired and move to the next (easier) job. They will often do this on items covered by warranty because they know that the customer will get a replacement.

Spoken like a gentleman!

And now, how's THIS for news on the FCC front:
My web site, which is intended as an educational tool for those interested in FM broadcasting, has come under fire from the FCC. One of their field chiefs out of Boston is hot on the trail searching for my whereabouts right now. This, after 7 hits on the web site from gatekeeper.fcc.gov.

I read about Bill Cheek, arrested for alledgedly offering plans for MDT demodulators on the net. Now once again our freedom of speech on the web is being attacked by the FCC.

SB QST @ ARL $ARLB030
ARLB030 Operators still needed in Oklahoma tornado recovery

ZCZC AG30
QST de W1AW
ARRL Bulletin 30 ARLB030
>From ARRL Headquarters
Newington CT May 6, 1999
To all radio amateurs

SB QST ARL ARLB030
ARLB030 Operators still needed in Oklahoma tornado recovery

The Salvation Army and the American Red Cross have put out calls for
additional Amateur Radio assistance in the wake of Monday's
devastating tornadoes in Oklahoma. Oklahoma Section Emergency
Coordinator Bennett Basore, W5ZTN, has been running emergency nets
and radio amateurs have been handling ''tons of health and welfare
traffic.''

Oklahoma Section Manager Charlie Calhoun, K5TTT, reports the
Salvation Army has requested amateur operators starting May 7 and
probably for the rest of the week. ''They need hams to act as
shadows and transport units in addition to manning the canteens,''
Calhoun said. ''They are expecting to send out 40 canteens into the
field tomorrow.''

Calhoun said much of the activity is going through the Edmond, Oklahoma, 147.135 MHz repeater, which can be difficult to access with hand-held transceivers. He said mobile transceivers and external antennas and power sources would be a better choice.

He said volunteers should plan to stay at least four hours in the field. No vehicles are allowed in the field, and officials are shuttling hams in and out. Calhoun said it appeared that Amateur Radio communication would be required at least through Saturday. Volunteers should check in with the net control on the 147.135 repeater upon arriving in Oklahoma City.

Hams from the Tulsa area are planning to leave today for the Oklahoma City area to assist.

Ken Runyon, KC5PNO, reports that The Red Cross is requesting at least 50 amateur operators to be available all day Friday, May 7, to begin damage assessment. ''Hams will start working with damage assessment teams at 7:30 AM and will be moving from home to home through the disaster area,'' he said. Operators will need good footwear, a two-meter radio, and batteries to last at least 10 hours. Volunteers should contact the Red Cross, 405 232-7121.

OK Public Information Coordinator Thomas Webb, WA9AFM, reports he's monitored health-and-welfare traffic on both 2 meters and 75 meters coordinating Salvation Army canteen support.

''Based on the excellent warning, most of the victims appear to have left the disaster area prior to the strike and were in contact with friends or family or were in shelters with adequate communications,'' he said.

For more tornado information and photos, visit http://www.hamsnet.net/kc5trr/oklahomadisaster.htm

In the Wichita, Kansas, area, Kansas Section Manager Orlan Cook, W0OYH, reports emergency net operations continue on HF. WB0OFS is a net control for the Central States Traffic Net. The town of Haysville was hardest hit during the Monday storms, which left five people dead in Kansas.

With January's unusual tornadoes still fresh in their minds, Amateur Radio operators in Tennessee were ready to respond promptly when severe weather hit the Volunteer State May 5. Some counties activated emergency nets just in case. Hams in Montgomery County were asked to have mobile units ready to go to specific areas to check on flooding. In addition, the Red Cross asked hams there to stand by to assist. One operator was deployed to the local emergency operations center and another to the Red Cross.

What?

yes....

he talked to me for about an hour or so.

wants info about things related to scanning
from the laws against it to how people pass
ass-gass while listening to their favorite
past-time.

he's doing his story. names to be anonymous
like "Bill" or "Sam" or "Twinkle-tit" etc.

he will give you newspapers he's worked at
if you want to check him out and mag's he
is presently doing this for or worked with
before.

he just wants dialogue for which the scanner
will be used or not seeing as what the
Congesss is going to limit use of scanners
and now Telling UNIDEN they cannot make radios
to listen to digital...

he just wants your views on these matters and how your
listening pleasure will be changed once these new
restrictions are placed, when passed by Congress,
on the public right to know.

he's wanting to speak with people who do it
for the fun of it.

he's interested in why people find cellular
listening interesting or boring. Those that
can still be listened to...

give the guy his whizz...

be paranoic and stay that way. Pick his
nose too.

he actually called me...kid you knot.

so....he may be calling you next.

bill conduit
etc.

> the 8200.

I'm about to replace a well-used Yupiteru MVT-7100. It's been especially prone to interference; all the reviews I read when I bought it mentioned this shortcoming, but still rated it highly. How does the Icom IC-R2 compare to the AR8200 and/or the 7100?

Five years ago, when I bought my 7100, the Icom R1 was in the same market and all the postings I read said to stay away from it. How does the R2 "run circles around" the AOR?

Thanks,

Dave

I'm about to replace a well-worn Yupiteru MVT-7100. What would you recommend?

I've heard good things about the AOR AR8000 and 8200; I would like a PC-compatible unit. Being in an urban area, the more resistance to intermod the better. I don't know anything about the Icom line, or any others for that matter, and I want to be sure I'm not ignoring a terrific scanner.

Thanks,

Dave Palmer

I know alot of the storm chasers are hams so I would first look for them on
area repeaters and then simplex, esp calling freqs.

Hello Jeff,

I had bought a PRO-2035 a few years ago which I hadn't taken out of the box until about a couple of weeks before the 1 year warranty expired. The CPU was whacked. My local Radio Shack sent it in for repair and about two weeks later I was informed they couldn't repair the scanner. I was given a PRO-2042 (better scanner) in exchange since the PRO-2035 wasn't made anymore. Just f.y.i.

Piero

What a bunch of pure Bull Shit!
The new Top FCC guy got on his HF radio and screamed at
some guys on 3.853 LSB one night not long ago!
He's really a strange one!

Well as with any beam antenna, it will increase the signals coming into
your scanner into which direction the beam is pointed but remember this
one too. Anything that increases your gain on a desired frequency will
also increase your chance of intermodulation/interference too. if you
live in a densely populated area; you might want to get some notch
filters designed to stop the intermod from coming into your scanner.
Disclaimer: I am not an electronic technician. I only this this 'casue
I love to read those radio scanning magazines.

775. Noisy pager tower! Help!

Newsgroup: rec.radio.scanner
Date: 1999-05-08 00:00:00 UTC
From: gdfthr768@aol.com
Message-ID: <19990508191042.14317.00000912@ng22.aol.com>
Source record: 119341

I live close to a pager/cellular repeater tower, and the splash and noise/images from this thing is abysmal and annoying. When I first got into the scanning hobby a few years ago, it was not so bad, adn I bought some filters which helped greatly, for awhile. But it seems lately like it's getting louder, longer, and more powerful. Just the last three or four months or so. One of my neighbors is also a scanner and shortwave enthusiast, and has noticed that he's now getting noise on his HF gear and TV. I just started noticing it on my TV as well. He said that one of the guys who used to maintain that tower told him (sounds like high school now, doesn't it?) that they were always running too much power, and they were going to be upping even more... As I said before, it has not always been this way in our neighborhood, just lately. Whom do I call to ask about looking into this tower, and if they are running too much power, etc.? Of course, I am not looking for actual local numbers from a worldwide newsgroup (!), but where can I start? Local utilies? FCC? Sometimes even the computer gets the tell-tale bleeps'blurps and so on from pager intermod. And any smaller, less-well-shielded AM/FM radios in the house are useless at peak cellphone/pager usage hours, which is most of the day. Any direction to lead me would be greatly appreciated!
Mike

kew@-NOSPAM?teleport.cem (Keith) wrote:
> The 9th Circuit court of the United States today affirmed that source code
> for software is free speech. This means that the possession of Source Code
> that decodes electronic transmissions is legal to possess and produce.

Before anyone decides to act on this assumption, it might be a good idea
to learn what the case was and what the court actually wrote. In Bernstein v.
USDOJ the question was the constitutionality of the export licensing
regulations as applied to crypto source code. The argument was that source
code is the proper and prefered means of expressing crypto algorithms.

| [6] In light of these considerations, we conclude that encryption software,
| in its source code form and as employed by those in the field of
| cryptography, must be viewed as expressive for First Amendment purposes,
| and thus is entitled to the protections of the prior restraint doctrine.
| [....] We emphasize the narrowness of our First Amendment holding. We do
| not hold that all software is expressive. Much of it surely is not. ....

The only way this could be construed as applying to MDT monitoring is
by asserting that MDT _encoding_ is actually _encryption_. If this were the
case, then you'd end up arguing that MDT transmissions are banned from
monitoring under the 'accessible to the public' clause in the ECPA.
If you're going to try to wield the law like a weapon, be careful you
don't shoot yourself in the foot.

New N.Y.P.D. Radio Plan & Frequencies
By David M Torres, New York City

the following is updated radio frequencie information for the
new york city police dept. they are in the process of re organizeing their
complet radio network which is now in phase 2 of a 4 part phase they
expect it to be completted within 2 years
phase 1 was the re organization of all city wide and special units
phase 2 is the re organization of all division radios
phase 3 will be the frequency expansion and narrowing the band
phase 4 with be the purches of new radios and fadeing out the
motorola saber's the new radio i have bin told is water
prof, bullet prof, weather prof and shock prof from droping
the parts are cheper than motorola
as for the new york city fire department E.M.S. units they are also
re organizeing their radio system from 800 trunk back to a conventional system
they will be useing motorola ASTRO saber's with both EMS & Police frequencies

if anyone knows of any new frequencies such as tac channels from A to E
or what new Tac channels the NYPD division radio have do leet me know i am
completly lost on this subject

i would also like to point ot the phase 2 is not fully completed yet its
a very slow process and it dose take time but it is on its way so the changes
can take place at a blink of your eye

as always happy listening and keep your ears on.....

Right On James. I agree with you basically entirely, except perhaps with the 8000, which I also got rid of. I love the R2 I have and due to the fact I just got a Optocom, I didn't get the MVT-9000, but I nearly did. Those are the two top handheld scanners out there PERIOD.

Read what he said Bill.

Not that Bill Cheek couldn't talk.

Not that anyone is depriving him of free speech.

Read it again Bill.

Bill Cheek could say anything he wants.

"bastion of free speach" has nothing to do with a saying stuff in a public forum and having it used against you in court.

Some believe Bill Cheek is in this spot because of too much free speech.

Don't see Opto in court. Didn't see Opto free speeching about MDT on their web site. Did read about Opto sending disk 5 times to undercover cops with interface. Sometimes egos take us too far.

Right Bill?

For sale:

1. Radio Shack Pro 26 hand held scanner. 25mhz to 1300mhz coverage (not cellular capable as far as I know)
200 channel, auto search, AM/NFM/WFM mode select. 2A5 date code on scanner.
With 4 Panasonic Ni-Cad batteries and Radio Shack charger. Has box,owners manual,antenna and belt clip.
Very good condition $ 150.00

2. Radio Shack Pro 2045 scanner with optional CTCSS board installed. Covers standard frequencies,800 mhz
and 225-400 mhz military aircraft. Features Weather Alert,Auto search,rotary tuner among other stuff.
Has box,owners manual,antenna and 12 volt AC adapter. Very good condition $150.00

E-mail me pjhealy@worldnet.att.net if interested.

For all those with an interest in British military communications, check out the new British Military Communications Homepage at

www.link11.freeserve.co.uk

Covers everything from Link-11 (aka TADIL-A or Alligator) and Link-16 (aka TADIL-J, JTIDS or Jamboree) to Link-14, Piccolo, VFT, UKADGE, UKMACCS, Satellite and submarine comms, crypto, ECM and much more...

Send, post or exchange information, anonymously if you prefer, and find out how the British military communicate, and help us keep you up-to-date. Failing that, just browse and enjoy, and you might learn something that will either help or encourage you to listen into this fascinating subject, and get even more out of that scanner or HF receiver.

And if you really do get hooked, subscribe to our Newsletter filled with a variety to +ACI-interesting+ACI- pieces of information. If it's British, military and uses a radio, then this is a place to go.

Good listening.

NNNN

>I have a strong hunch that whoever this really is, he's a RAT BASTARD that's
>scamming everyone.

You maybe right, but with only one letter difference in the wife's name
that's hardly conclusive. It could very easily be a typo.
What makes me wonder is how quickly he's become concerned about this. If
I lost my house, car and everything else I think it would be awhile before I
started worrying about replacing my radios. I think I'd have more pressing
problems.
On the other hand, since he's using a P.O. box at Tinker, then likely he
really is in the Air Force, and if this a scam he could get into some really
deep sh*t, since he's using that P.O. box on the base.
It would be interesting to call the base locater service at Tinker and see
if he really is stationed there, then talk to the chaplain's office and find
out if he did lose everything in the storm.

There is no "easy" cell mod for this scanner. A company in the UK called Javiation, (www.javiation.com) I believe, used to carry a replacement CPU board you can install to replace your existing CPU to receive full cell. They also sold a replacement CPU itself, but that should only be tackled by someone VERY proficient in CPU replacement. If the web address I gave you is incorrect, try a search on "Javiation" and you should find it. Jonathan, (the owner) is very helpful and honest. I have dealt with him and know several others who have been very satisfied.

Bill,

For me the choice would come down to, the BC895XLT, Alinco's DJX10T, or Icom's R2.

The BC895XLT basically covers 30-956 MHz (excludes cellular and 512-800) and its real plus is its trunk tracking capability. Price is around $200-225.

The R2 is a HH and real small with coverage that includes the HF portion and goes upto 1300 MHz but does not have trunk tracking capability. prioe is around $225.

The DJX10T has everything the R2 has and goes upto 2 GHz but like the R2 it too does not have trunk tracking capability. Price is around $350.

Add a consideration of performance to the features and it can become a difficult decision. Good luck.

796. Icom IC-R2 discriminator tap? I'm getting closer

Newsgroup: rec.radio.scanner
Date: 1999-05-08 00:00:00 UTC
From: asnow <snowball@operamail.com>
Message-ID: <37347453.63DC8B0C@operamail.com>
Source record: 119396

I am looking at the IC-R2 schematic now, and I find connector J1 is part of the Logic Unit. I must say that I am not an electronics major, but I have taken a few courses in college.

Where is J1 though inside the receiver? I'm not sure if it is on the upper or lower PC board. Is J1 the conector between the top and bottom board?

Once I do find J1 will it have a mark to designate pin 1 on it (like an IC)?

What is an "NFM disc"? Am I conecting to this disk or direct to pin 16?

The 0.1 microfarad Condensator mentioned below..... where do I install that? I am thinking that I will need a sub-miniture audio jack attached to the case, and I will attach pin 16 from J1 to one side of the jack, and bring the other side of the jack to ground. Does the 0.1 microfarad Condensator get placed between pin 16 and the jack, or the jack and ground?

Finally, where has anyone found to install the jack for the discriminator? This receiver is pretty tiny. The 2 locations I can see are right below the selection knob on the right side of the receiver, or perhaps on the right or left side right between the battery pack, and the upper PC board. If there are more suitable places please let me know.

Thanks for any help. I'd really like to install this mod and any detailed advice / instructions I can get would be great.

>The NFM disc is on the connector J1 pin 16, (WFMS) , do not
>vorget to use a 0.1 microfarad Condensator.

Anyone have any Icom PCR-1000 *.MCH frequecny database files they're willing
to share?
I'm looking for some in the Michigan area, as well as general interest,
i.e.; short-wave, FEMA, etc.

Thanks,
Bill Crocker

How sadly true that Mr. Cheek's actions have put him in the position that people say "no one cares about him anymore".

Perhaps Mr. Cheek got busted again by law enforcement???

Regardless, I have spoken with friends of mine who are attorneys combined
with my own professional clinical knowledge in matters of mental health
and
I believe I have found the perfect defense for Bill Cheek in his currect
legal
problems of his breaking federal laws.

Bill should plead "Not guilty by reason of Insanity".

Seriously, this would get him out of the trouble!!!! His behavior both
online &
offline could CERTAINLY be used to support such a claim.

With my dual profession in both RF Electronics & Mental health Treatment,
I would be willing
to appear as an expert witness to help Bill with this claim.

Hello Eric Oyen.

I am a little surprised, you are the last person who I thought would compare Bill Cheek's
actions to what happened in Germany in the Nazi years.

But you are right, he acted as a dictator, denied people basic rights & tried to control until he was finally brought down.

Very good Eric!

I'll take selectivity over sensitivity in my neck of the woods. Sensitivity is a two-edged sword ... I live in the midst of pager towers, industrial repeaters and 50 yards from a police and fire transmitter. Sensitivity I do NOT need. ;-)

Rick

the following is updated radio frequencie information for the
new york city police dept. they are in the process of re organizeing their
complet radio network which is now in phase 2 of a 4 part phase they
expect it to be completted within 2 years
phase 1 was the re organization of all city wide and special units
phase 2 is the re organization of all division radios
phase 3 will be the frequency expansion and narrowing the band
phase 4 with be the purches of new radios and fadeing out the
motorola saber's the new radio i have bin told is water
prof, bullet prof, weather prof and shock prof from droping
the parts are cheper than motorola
as for the new york city fire department E.M.S. units they are also
re organizeing their radio system from 800 trunk back to a conventional system
they will be useing motorola ASTRO saber's with both EMS & Police frequencies

if anyone knows of any new frequencies such as tac channels from A to E
or what new Tac channels the NYPD division radio have do leet me know i am
completly lost on this subject

i would also like to point ot the phase 2 is not fully completed yet its
a very slow process and it dose take time but it is on its way so the changes
can take place at a blink of your eye

as always happy listening and keep your ears on.................

The Cheeks' arrest, Newsday reported, was "a related case." Neither the Cheeks nor their lawyers, Howard Frank and Lynn Ball, wanted to talk last week about the charges. "I don't think I have any comment," Frank says.

"The case is brand new to me, and I just don't know enough yet to make an
intelligent comment. It would just be stupid to say something now when I don't know what's going on."

But scanner buffs said the arrest sent a chill through their community -- at least in the United States.

"There were a number of individuals who were running Web pages to help disseminate that software that could decode pagers or MDT," says Blanton.

"What's happened is that now that folks have realized that Bill has been arrested for this, everybody got scared and pulled the information.

There's still one individual in the U.K., who, of course, is not subject to U.S. laws, who has posted these applications on his Web page.

But anyone in the U.S. who goes to his page [www.kmed70.free serve. co.uk/ kmed70/software.htm]and downloads is probably doing something illegal."

Source record: 119425

I have a Bearcat 855 xlt scanner, and I have done the 2 mods (cell coverage and 50 extra channels, easy as hell) but I'm having trouble with the discriminator. In Bill Cheek's guide, it says it should be pin 11 on IC4. No IC4, no pin 11. The only IC I have that has 11 or more pins is IC 701. It is labeled NPC 926K PLL2002A1. There is audio on it, at pin 14, but it is extremely low. Doesn't even register on my computer even with the rec. volume all the way up. The other audio I have found is coming off a resistor labeled TP3. It is fairly loud, and the volume control doesn't work on it, so maybe this could be it? But what a weird place for a discriminator output? Is there a way to test if it really is the discriminator output? It works for decoding pagers, and it worked for awhile to decode MDT's, but now it doesn't. Also, what is the correct frequency step in the 851-880 range? I think my scanner is off. And one more thing. Most pagers receive on frequencies with 4 places after the dot. IE 931.6125 But I can only put in three. 931.612
Are all scanners like this? Or can some tune even better? Thanks in advance for any help I may receive. Bobbo

After reading that post, I imagined a commerical... Somebody is
shooting someone and they get shot in the hip, and fall to the ground,
the bad guy runs off and the good guy stand up, and pulls out his
scanner and a slug drops to the ground, "Never leave home without your
TrunkTracker!"

Almost like those Seinfeld ones he does for American Express with
Superman.

827. Re: Where to "point" my new monitenna?

Newsgroup: rec.radio.scanner
Date: 1999-05-08 00:00:00 UTC
From: dcisive@earthlink.net
Message-ID: <MPG.119e555d5c211179989783@news.earthlink.net>
Source record: 119427

Again (and I promise for the last time) the Monitenna is not to be confused with either the construction or performance of the "Scantenna". Quite simply the Monitenna "Blows It Away". All I can say is I have also owned a Diamond Discone as well as a Icom Discone at no small cost I might add. The discones did an admirable job overall, but the bottom line is that while living in a Coastal town 2 blocks from the ocean and blocked from most signals by the Coastal Range of mountains, I was able to pick up clear listenable signals from Hayward, San Leandro, San Jose, Oakland and San Francisco with the Monitenna. Not so with the discones. I guess I am a performance freak and for me the bottom line is that last bit of performance over something else is worth any and all the dollars necessary to achieve it. Surprisingly enough, the Monitenna was less than half of the cost of the others and still blew it away. All this and an antenna that neither rusted, bent or was in any way effected by West Coast life near the ocean with all of the salt air and high winds and storms that it is noted for. I am also a former Chicagoan and still believe that indeed side by side the Monitenna still rules for all "General Scanner Coverage". This would basically mean across the band from 27-1000mhz....Anyone here on this newsgroup can go and spend their hard earned money on whatever they like (and believe me if you can name it I have likely tried it). I am only trying to save some folks the time, money and trouble here. I believe this is in the true spirit of a hobbyist in this area.

828. Re: Going to buy a handheld scanner, suggestions?

Newsgroup: rec.radio.scanner
Date: 1999-05-08 00:00:00 UTC

Message-ID: <MPG.119e5693ec1a3b1989784@news.earthlink.net>
Source record: 119428

I admit that I am fussy and not afraid to spend the $$$ if necessary. So with that in mind I feel that the best are in the following order. (1) Bandercom's modified Yupiteru MVT-9000m2.4 for around $550.00 delivered from Finland, (2) The Icom IC-R2 for about $219.95 available at most dealers here in the U.S. These units have the finest audio, sensitivity, build quality and reliability. There are those that will argue, but from the perspective of having been there and done that, this is strongly how I feel, and with this you certainly can't go wrong. Personally I would not choose to own a Uniden Bearcat or Radio Shack product when you could have one of these mentioned. If your price range is right in between then my overall favorite would have to be the Relm HS-200 which is now widely available for at or under $200.00

Message-ID: <7h2em3$i40$1@nnrp03.primenet.com>
Source record: 119435

I will tell you why... The aor 8200 is a peice of $500.00 + SHIT!
That's why. I went down and bought one. I got home and sat down with it and my Aor 8000 my Yupiteru MVT9000 and My $200.00 Icom R2.

I went through and tuned the same frequency on each radio and connected them to the same antenna (G5RV and Diamond discone in this case) To make a long story short the AOR8200 fell short. IMHO If you bring a radio to market with a bunch of cool features it should at least have a receiver as capable as the older model (if there is one). Not so with the 8200. Lots of Wizbang and NO receiver equals a radio that I returned on the same day I bought it. I will stick with my MVT9000 AOR8000 and ICR2 for now.

On the lighter side Have any of you seen the Standard VR-500?
This looks to be a very promising radio. The sensitivity does look a little weak though.
James

836. 800 mhz MDT Reception Question

Newsgroup: rec.radio.scanner
Date: 1999-05-08 00:00:00 UTC
From: joepwalker@webtv.net
Message-ID: <22608-3734B68B-64@newsd-164.iap.bryant.webtv.net>
Source record: 119436

Regarding the use of an MDT Software decoder program....a couple of questions:

(1) Locally, the agency I wish to monitor is on an 800 Mhz Trunked system. Is the MDT data channel assigned to a specific trunked channel? In other words, if I am able to locate police dispatch say on "Channel 4037" would I also be able to locate MDT traffic on a specific "channel" on the trunk?

(2) I hear two types of data when monitoring the assigned freqencies for that agency. The first is a constant data stream while the other resembles a "packet burst" similar to what u might hear on 2 meter packet. Is this "packet burst" the MDT signal when data is sent or received at the MDT? If so....

(3) What is the constant data stream I'm hearing? Some sort of diagnostic on the trunked system?

(4) Finally...any suggestions on how to isolate or locate the data channel on the trunking system or is it going to be a matter or sitting and listening until a signal is sent?

Thanks in advance

Very Good. I hope it works out well with them. It sure isn't going to sound like their VHF system. Get ready for Non Portable Use and some noise.

This is what i have

Saber 1 uhf 12ch
6D core, H/pwr, non secure
Model # H44SAN7139CN
comes w/ 1 batt.motorola used (not so good)
plus 1 brand-new batt motorola (7.2v @ 1800 ma)
& ant. the shape of the radio is in
good shape I'll give it a 8.

Note*

Asking $240. $225 + you paid for S+H
* Prepaid (Postal) Money Order*

****Need to read radio for band spread?****
Don't konw band spread!

I'm not going to paid someone $40 or $30 so i can read
the radio. If I'm not going to kept it.

Then i used my scanner to see what were the
CH. And this is what i found.

Ch. 1 447.285
Ch. 2 449.925
Ch. 3 460.000
Ch. 4 460.500
Ch. 5 449.125
Ch. 6 447.125
Ch. 7 --- Blank
Ch. 8 --- Blank
Ch. 9 --- Blank
Ch. 10 --- Blank
Ch. 11 --- Blank
Ch. 12 --- Blank

Save $40 or $30.

And this is why I'm selling it!
1) I got it with a trade!
2) It cost to much for me to keep this radio.
I would need a charger , software , cable,
rib box and get this a 386 computer. Ha

You can e-mail me

>avoid it. I sometimes run into ops on the air who ask me
>(as I am working mobile CW) "how do you write it down?". Egad.

Hi Don!

Hmmm... I've heard this admonishment before, and I really don't understand it. I've been operating almost exclusively CW for over 30 years, and I've always written it down. It feels natural to me. It goes in my ears, it comes out my hand. It's not particularly legible above 30 wpm, mind you, but I can refer back to my notes in a ragchew and remind myself of what was said. (I can't recall a 10 minute monologue, but I can if it's written in front of me). Later on (2 or 3 qsos late), I can jot down a note or two in the log if I want. My wife can look over my shoulder if she wants. When visitors come over, they can see that the process actually works... morse in, words out. Above 35 wpm or so, I'll put the pencil down and copy entirely in my head, but if somebody throws a long unfamiliar and non-phonetic word out there at 45 wpm, I'll probably miss it, and I've found that's usually the case for people that "only copy in their head", even at slower speeds. And speaking of slower speeds, people that copy only in their heads have difficulty with copying 10 wpm qsos... I think you forget what was sent at the beginning of the word at that speed... hi.

Besides the practicalities, I think it's easier and faster to learn code while writing it down. As you decipher a letter aurally, you write it down, see it with your eyes, and it connects you with the part of your brain that already knows how to read and write.

Hey, different strokes for different folks, but I think it's a lot easier and more practical to learn code while writing it down, and make the transition to head-only copy later on if you need or want to. Am I the only one in hamdom that thinks so?

I wish that someone could do a respectable story about radio scanning. This hobby is about so much more than intercepting phone calls. The public in large already has less than positive views on radio scanning. A story that just 'focuses on the 'sexy stuff'" will just further reinforce untrue stereotypes about the hobby.

>I'm just curious how you guys REMEMBER all these scanner commands? I own several different brands and depending upon my destination, I might pick up the Icom, Yupi, Welz, Trident, Uniden or Pro26. ALL OF WHICH HAVE DIFFERENT COMMAND SETS!
>
>The commands are very consistent amongst brand names (all Uniden and RS work alike), but once I get accustomed to the Uniden, I forget how to search with my Welz, or Trident. ARGH!

Yeah, it's a hassle isn't it! Using different command sets is one of the ways manufacturers avoid patent infrigment problems with other manufacturers. But it sure complicates things. The RS scanners made by GRE (2004, 2005, 2006, 2042...) are also different than the Uniden. If you use the features a lot you'll eventually remember. I still keep my manuals handy for the more complex rigs. Previous post suggests an index card w/shortcuts - also a good idea. Get it plastic laminated for portables.

>Icom R2 and my Welz are EVEN WORSE since they have limited keys to work with. So my question is: How can you possibly remember all this stuff?

Disagree here, these sets use the tuning knob to scroll through a menu of features, and then select among the choices. In a sense, the commands are already memorized. I find this extremely handy and I wish this feature was incorporated into other radios (desktop, etc). But it's all a matter of individual taste and ergonomics. I'd have to agree with Bill Cheeck - from an ergonomic standpoint - the 2004 was the best base scanner ever designed.

I have a strong hunch that whoever this really is, he's a RAT BASTARD that's scamming everyone. Here's the data on the callsigns he listed. Pay close attention to the spelling of his "wife's" last name and location:

N2WZT
MARK J WALKOWICZ
PO BOX 1242
ROME NY 13442 USA

KC7GHZ
TERRI L WALDOWICZ
5560 ORCHARD LN
LAS VEGAS NV 89110 USA

Check them out yourself at http://www.qrz.org.

What'sa matter Mark? Couldn't find a "wife" ham that had *exactly* the same last name?

GOD BLESS you too Mark, you rat bastard! Maybe when you're in HELL you can get on the Internet and cry for a new ICOM rig.

> I just finished giving my seven year old his code lesson. He's learning the
> code to earn a award in his Tiger Cub Scout group. He is a seven year old
> that came to me to learn the code, and has no interest in radio,

Well why not FORCE him to learn about radio before he can use morse
code? It is ok for him to want to learn Morse Code and not anything
about radio, but not the other way around?!

I would
> think that anyone who is interested in radio should stop crying about it and
> donate the 15 minutes a night for 2 weeks, and learn it.

If your son doesn't have to learn or like radio to enjoy Morse Code,
then people who want to use or like radio do not have to learn Morse
Code.

> No one complains about having to learn how to use windows before they can
> surf the net....

Of course not, no one complains about having to learn how to use a ham
radio before surfing the repeaters either, but what if you made them
learn Russian before they were allowed to use the internet? Then you
would get the same complaints.

Mark,

I don't float so well, but managed to pass my scuba tests. OW certification requires a 10 minute survival float. I get the sense you're perhaps familiar with the frustration of struggling, while others lounge around on their portly seat pads, idly chit-chatting. Imagine doing this where life and safety is easily compromised, as opposed to just struggling with uncooperative ears. I wonder if you know what it's like to be at the limit of physical endurance, with the pool edge -- and safety -- far, far out of reach. At the end of the ten minutes, I was exhausted to where I needed help getting out of the pool. I passed the test, but only proved that I would perish in fresh water without a flotation device. I found out later I am a mere six pounds negatively buoyant. That's quite a lot, though, and according to my OW instructor, I am about as dense as they come. Most people are positively buoyant in fresh water.

What does this mean when I mostly dive in calm tropical seas, always with at least a shorty on for flotation? Why should I need to demonstrate that I can survive in fresh water, alone, without help, for a mere ten minutes? Why should a not-so-sprightly-anymore, middle-age man need to demonstrate a skill of dubious use? Why did my perfect written test scores not exempt me from this portion of the test?

Conversely, what expectation should I have of being exempt from any one of the requirements, useful in my mind or not?

Michael.

The best analogy would be having to learn Morse Code in order to use the internet, as Morse Code has as much to do with knowing how to operate and work the internet as it does with knowing how to operate and work a Ham radio.

I have great news for you! You CAN become a ham without learning Morse code. Looking at FCC Part 97, you can qualify for a Technician's license with only a written procedure and absolutely minimal theory test. No Morse code test!

It seems your wish has been granted, and quite some time ago at that. Run on over to your nearest VEC testing facility. There's no need to stop to thank me.

Michael.

What does the "lp" mean after some of the frequencies? Does it mean "low
power" or a maximum of 2 watts?

True enough; however, it has everything to do with the es-prit de corps of ham radio. Knowing that one has gone through, and survived, the identical trials and tribulations of his or her counterparts, builds a unique bond of dedication and purpose. The instant gratification crowd of today has no appreciation for that bond.

Sorry Bill, didn't know this was the religious.right.republican newsgroup. I was posting about scanners and replying to your free "speach" remarks. Didn't know we were talking Republican folklore. Be more than happy to discuss it in E-mail or alt.republican.we.have.no.real.issues. The reports seem to say Bill Cheek WAS an easy target. Has nothing to do with the liberals, Democrats or Bill Clinton. Has to do with Bill selling not one but 5 interfaces and included the means to decode MDT. He all but declares himself guilty in his disclaimer on his WWW page. The SS didn't pick somebody easy, Cheek made it easy for the SS. Opto isn't in jail.

Is there a standard PL tone for the 5 800 MHz police intercoordination frequencies? I know that at least 2 agencies here use 156.7 Hz. Is this the same everywhere?

According to the Vancouver media this new system is to be completely digital, furthermore the media said that the type of digital encoding that will be used on this new system is not in use anywhere else except Toronto, hence there is not enough of a market to produce a scanner that can receive it. This apparently is being done to ensure that you and I will not be able to listen in.

Incidentally this won't only affect the Vancouver area, I have read that this new system is to provide communications amongst all police departments in BC, right through the interior, in other words we're all screwed !!

Hope this helps.

Now that sounds like a plan, a Morse code test to get on the internet
would keep some of you no-code peckerwoods out of the DX newsgroup
and about a half dozen other ones this 'discussion' doesn't belong in.

Is it REALLY necessary to post this crap to every ham newsgroup there
is ? Some of us have already learned Morse code, we aren't looking for
any good reasons not to....

I'm pleased to announce the release of version 2.1.1 of MultiMode, a decoding program for amateur radio operators and radio hobbyists.

MultiMode is a shareware application which allows your Macintosh to decode and transmit several different modes of non-voice communication often heard on shortwave and ham radio. It is the only program of its kind for the Macintosh,rivaling commercial packages for the PC platform costing hundreds of dollars. It is ideal for amateur radio operators, shortwave radio listeners, and other radio enthusiasts.

MultiMode allows you to decode and display morse code, RTTY, FAX, SSTV, ACARS, and many other modes on your Mac, without any extra hardware. MultiMode now also allows you to transmit in most of the modes of operation.

MultiMode currently supports the following modes:

Morse Code (CW)
RTTY (Baudot)
ASCII
SITOR-A
SITOR-B / FEC / NAVTEX
SSTV (Slow Scan TV)
WEATHER / SATELLITE FAX
ACARS (Aircraft Communications)
PSK31
DTMF, CCIR, EIA Tone Modes
Hellschreiber
Audio Spectrum Display to aid in properly tuning in stations

MultiMode is shareware. MultiMode may be downloaded from the following URL:
http://www.blackcatsystems.com/software/multimode.html

You didn't say if it was upper or floor unit. I had a friend that had an upstairs unit once and had an opening into the attic. I live at a downstairs unit and only have a small patio outside. Antennas are forbidden here too. I bought a tripod antenna holder from Radio Shack and put a directional yagi antenna on it, just sitting on the patio floor.

However, the electrical noise here his horrible! It make my SWL listening almost impossible.

> 415-386-2125 or contact him at newsfeatures@yahoo.com
> Thank you.
>

Why would you want us to knowingly and willingly violate the law? It is illegal to discuss anything that you hear with anyone else. The exception would be if that person was present at the time and also heard the transmission. Being a journalist you should be well aware of this.

As far as remaining "anonymous" that is a joke. It is not that difficult to figure out where and who someone is. Especially the government.

Considering the hurry up and pass this bill attitude that Congress has towards HR514 (which IMO is a senseless bill to begin with) an article as you're proposing would be nothing more than another nail in the coffin of the scanning hobby. Congress has no interest whatsoever in what scanner enthusiasts have to say. (For details read "Congress Strikes Again" pg.8 May 99 PopComm) They would run with an article like this and use it to reinforce their position.

BTW - what's with all the cross posting?

913. The new Electra Corp Tiger Scan

Newsgroup: rec.radio.scanner
Date: 1999-05-09 00:00:00 UTC
From: scanshack@aol.communicate
Message-ID: <19990509112100.16596.00001243@ng14.aol.com>
Source record: 119299

I just received my new Electra Corporation Tiger Scan.

I really like the ease of programming/operation, the feel, the size and weight, the introductory price $59.95 + shipping/handling and the performance of this new little radio.

In this world of thousand channel/super complicated radios the Tiger Scan is a breath of fresh air if all you want to do is easily program in a couple of your favorite channels to listen to.

I look forward to seeing future products from Electra Corporation and I hope the Tiger Scan is a successful re-entry venture for them in todays scanner/radio monitor market place.

For my full review check out my site listed below.

>Well as with any beam antenna, it will increase the signals coming into
>your scanner into which direction the beam is pointed but remember this
>one too. Anything that increases your gain on a desired frequency will
>also increase your chance of intermodulation/interference too. if you
>live in a densely populated area; you might want to get some notch
>filters designed to stop the intermod from coming into your scanner.

Also think of a beam acting like a reflector on a torch bulb. Adding the
reflector increases the amount of light going forward AT THE COST of reducing
the light going backwards.

A similar thing happens with a beam - it can be an advantage, but it can also be
a disadvantage.

Whist it enhances the forward reception, the reception in other directions is
reduced, sometimes to the point of non reception at all. This is highly
desirable IF you want to listen to one particular station and can 'point' the
beam at that station, but a beam is not a good 'general purpose' scanner aerial.
You will miss some of the action if you 'scan/search' with a beam.

OK, If you live out in the country and the nearest town is to the west, then
pointing the beam at the town might pay dividends. I say might. Often it might
be best to point the beam at the high hills around you. Radio repeaters,
cellphones, local & national broadcast & tv transmitters etc are always located
on the highet points in the area in which they serve. That usually means high
hills. Give it a try when you get the beam.

Whatever - happy scanning.

Hmmmm, cloning copyrighted EEPROMS's (and SELLING them too ?!?!),
what a dumbass ! (say hello to that twit posting received MDT
traffic on his website for us, and the Cheeks to !).....

I suspect the Moto IPP division will be notifying the US Marshalls,
USSS, and they're going to be busting your door down pretty soon...
And for what ? A lousy $150 ? IDIOT !!

Hmm, unless you're just selling a bunch of "genuine" Moto upgrade
kits ? Well, too late now...your now a big red blip on Motorola's
copyright protection/intellectual property protection radar....
and at the very least, they're going to be looking into this to
see if your legit.

>> But sure happens to be true be in this case, not that you'd know
>
>Mark,
>
>Get a good book on logic. Read it. Get back to me when you think you
>understand it.

I have read and understood several books on logic. also rhetoric. You
posted rhetoric not logic. Your simple statment that something is not
logical proof that is or is not true, neither did I post logic. You
simply advanced a claim one that hapens to be both false and
insulting.

It is a simple that most people with disabilities tend to
devlope other abilities, often to level far beyond those of "normal"
people. Why? Because we have to. just to survive in many cases. this
does not compensate in any manner just allows us to survive sometimes
it does give one or more of us a niche in the world

You simply don't know what is like to suffer form any
disaility, for that you can be thankful, but without it you can no
more understand my world than I can understand what you see in code,
to pick an example

'Pagergate' Feeds Concern

By Monica Alleven

Law enforcement and privacy-minded businesses may think twice about sending sensitive information over pagers after "Operation Pagergate" led to the guilty pleas of three men in New York last month.

"The unauthorized interception of alphanumeric pager messages is a criminal invasion of privacy comparable to wiretapping someone else's telephone," said Daniel Fetterman, assistant U.S. attorney for the Second District of New York.

Breaking News Network Inc. and its owners, Steven Gessman and Robert Gessman, and the general manager, Vinnie Martin, pleaded guilty Nov. 20 (1997) in Manhattan federal court to charges related to intercepting alphanumeric pager messages intended for the New York Police Department and Fire Department of New York.

BNN, which advertises its news-gathering and dissemination services on its Web site, is still in business. However, Martin said last week he could not comment on the case until the defendants'March 3 sentencing.

Prior to the NYPD investigation, code-named Operation Pagergate, New York police sent some messages via pager because they were considered too sensitive for police radios. The messages included the locations of high-level government officials and crime witnesses, the arrests and suspensions of police employees and police mobilization points.

BNN, apparently with the help of defendant Jeffrey Moss, could intercept those and other messages. The company pleaded guilty to illegally manufacturing, assembling and possessing software and cloned pagers, and the three men pleaded guilty to intercepting alphanumeric pager messages sent between members of the NYPD and FDNY.

The company faces a maximum fine of $500,000, while the individuals each face a maximum penalty of six months in prison and a $5,000 fine on each of two counts.

According to the original complaint, Moss, a former BNN dispatcher whose case is pending, told authorities he cloned three pagers that intercepted police, fire and emergency services messages.

Pagers may be cloned by duplicating the capcode from the original pager into another unit, so the clone is capable of receiving the same messages.

Moss demonstrated for detectives how he used a scanner, computer, upgraded version of "Message Tracker" software and a Motorola Inc. kit to intercept pages, the complaint said.

Authorities in New York said they believed the case was a first. Alphanumeric pager messages are protected under the Electronic Communications Privacy Act of 1986.

In announcing the charges, U.S. Attorney for the Southern District of New York Mary Jo White said the incident should serve as a wake-up call for public, business and law enforcement agencies who use pagers. "No governmental agency or business is immune from this illegal monitoring," she said.

Industry sources say most pager users remain unaffected. "It's not an issue for 99 percent of the people," said Robert Hoggarth, senior vice president of paging and narrowband at the Personal Communications Industry Association. He added, "I really don't care if you overhear my ... conversation about picking up milk for my wife or what time a meeting is going to take place."

Source record: 119336

Dan:

I saved this info thinking someone else might want it someday! Credit to
the originator is in the header:

T.J. Harrell III thharrel@cs.nmsu.edu http://www.cs.nmsu.edu/~thharrel/

Itinerant Frequencies
Business Special Industrial
27.490 43.040
35.040 151.505
151.625 158.400
464.500/469.500 451.800/456.800
464.550/469.550
853.4875/808.4875
936.6375/897.6375
936.6625/897.6625

Itinerant frequencies are licensed for use at unspecified locations
for varying amounts of time. Licensees may use full power bases,
repeaters, and mobiles; however, there are restrictions on the height
of the base antenna.

Low-Power Frequencies (Business band)(2 watts)
VHF UHF
27.510 457.525
27.530 457.550
30.840 457.575
33.120 * 457.550
33.140 457.575
33.400 457.600
35.020 467.750
42.980 467.775
154.570 467.800
154.600 467.825
467.850
* 1/2 watt 467.875
467.900
467.925

Low-power business-band frequencies are licensed for radio use within a
certain area. All stations are licensed as mobile, with usual maximum
power at 2 watts. If the station is functioning as a base, the antenna
must be within 25 feet of the control point.

Dot/Star Frequencies

151.625 Red Dot (itinerant)
151.955 Purple Dot
154.570 Blue Dot (lp)
154.600 Green Dot (lp)
462.575 White Dot (GMRS)
462.625 Black Dot (GMRS)
462.675 Orange Dot (GMRS)
464.500 Brown Dot (itinerant)
464.550 Yellow Dot (itinerant)
467.7625 J Dot (lp)
467.8125 K Dot (lp)
467.850 Silver Star (lp)
467.875 Gold Star (lp)
467.900 Red Star (lp)
467.925 Blue Star (lp)

These are probably the most used (and abused) business band frequencies in the spectrum. The equipment is cheap and readily available at a variety of places. Equipment users are supposed to be licensed, but most people don't bother. Everybody from McDonalds to police surveillance has been reported using these frequencies.

asnow schrieb:
> Where is J1 though inside the receiver? I'm not sure if it is on the
> upper or lower PC board. Is J1 the conector between the top and bottom
> board?

Yes, you can follow the line and tap it on some other place also,
where it is more place to do it.

> Once I do find J1 will it have a mark to designate pin 1 on it (like an
> IC)?

Pin 39,40 and 19 are GND, you will easy find the pin 1.

> What is an "NFM disc"? Am I conecting to this disk or direct to pin 16?

Pin 16 is the NFM discriminator output, it is marked in the schematic
as WFMS.

> The 0.1 microfarad Condensator mentioned below..... where do I install
> that? I am thinking that I will need a sub-miniture audio jack attached
> to the case, and I will attach pin 16 from J1 to one side of the jack,
> and bring the other side of the jack to ground. Does the 0.1 microfarad
> Condensator get placed between pin 16 and the jack, or the jack and
> ground?

The 0.1 Condensator is used to protect any short on the disc line.

You can take the line also directly, the 0.1 is for your protection.

If you take a look at the Pin16 line, everywere it goes it is
tapped by a 0.1 condensator (C11,C66,C74), so should you do also.

The 0.1 should be between the Pin16 and the jack you intend to mount.

> Finally, where has anyone found to install the jack for the
> discriminator? This receiver is pretty tiny. The 2 locations I can see
> are right below the selection knob on the right side of the receiver, or
> perhaps on the right or left side right between the battery pack, and
> the upper PC board. If there are more suitable places please let me
> know.

I have done this on my IC-Q7 and am getting 100% decoding rate
on POCSAG, FLEX, ... any baud (tested up to 4800), it is almost
the same unit, the quality is far better then my AR8000 (with
discriminator), FT50 (with discriminator) and other radios ...

On the IC-R2 i thing the jack is a 4 pole 3.5mm jack, only 3 pol
are used, so you may use the 4 pole on the socket ...

The free software from AOR is free because it simply s*cks. I've never seen such terrible software.

Better stuff is 'Radio Manager' and 'ARC8200'.

Specially ARC8200 has a very nice user interface.

Links are found at :

Wake up and get a grip on reality. This country is losing its freedom fast. The fouth amendment (unresonable search and seizure) was successfully attaked and almost killed in the 70's, the second amendment is under attack, and the first amendment rights of free speech are waning.

America is no longer the land of the free and the home of the brave. There are other countries that have a lower crime rate, more civil liberties, and a higher standard of living than here in the US.

We're losing it friends. Thank our lovely Democrats and Republicans, who are merging into one mentality, and that's "Party first, country second."

Vote Libertarian.

960. Help with Bearcat BC760 XLT w/tone board installed

Newsgroup: rec.radio.scanner
Date: 1999-05-09 00:00:00 UTC
From: Sam@bra.net
Message-ID: <3735e5dd.942512@news2.newsfeeds.com>
Source record: 119363

I have an older (opened up) bearcat BC760XLT that has worked flawlessly for several years. About a year and a half ago I put the unit in storage. Last week I took it out and when powered up I get an orange light on the display screen, but nothing else.

Could the microprocessor need resetting? If so, how do I do that. It worked well just before I put it in storage. The two AA batteries seemed to be fine, and I replaced them whiled powered up, but to no avail.

Please post a reply as the email is bogus to prevent spam.

Sam

Much to my displeasure, I am being forced to move to and apartment. Picking up all the local stuff on my handheld's will be no problem, but I have a couple of base units I use just for the feds, Mil-Air, and general aviation monitoring. Any ideas as what type of antenna I could use would be greatly appreciated as mounting my present antenna's on the roof of the apartment is definitely out of the question. Thanks in advance.

Happy Monitoring,
Bruce

969. Re: Monitoring railroad activity

Newsgroup: rec.radio.scanner
Date: 1999-05-09 00:00:00 UTC
From: Dave Palmer <trainboy@pobox.com>
Message-ID: <37351792.49252877@pobox.com>
Source record: 119372

The AAR (American Association of Railroads) has identified all the RR radio frequencies into channels 02-97. They start at 159.810 and go to 161.565, mostly in 15-mhz steps (03 is 159.930, 04 is 160.050, 05 is 160.185, 06 is 160.215, ...230, .245, .260, .275....)

Railroad radios usually tune by these channels, and if you ever get an employee timetable they're usually listed there.

>
>Right Bill?
>

You miss the main point. Has nothing to do
with too much free speech. Has to do with
the bastards who concoct the stories that
get passed on to the assholes who do the
prosecuting and then when they arrest them
they invent ways to make it impossible to
defend one's self due to logistics and
their paranoia and of course, their ineptitude.

why go after Cheek for that which they have no
idea of when Clinton is selling this country
out down the tubes because he's just that kind
of Pres.

giving secrets to China under the guise of "friendship" or allowing the Chinese to come to USA and then steal secrets of atomic coding because Mr. Bill wanted to be "friends"

this is reason to impeach the guy. he has put the USA in danger and from what we can read he's not to shaken up about it.

Adn all the time the CIA and FBI were giving warning signals to his staff.

But they can go after Cheek because he's "easy" ...

I wonder who turned Bill in. OR invented a story that made them "suspicious" and instead of investigating they just went into the files and closed their eyes and "believed what they heard"

Clinton's policies allowed Chinese spies to steal Atomic material as easy as just walking in and walking out with them. He allowed what info he got to be "churned" into butter to make the Chinese feel more at home: butter makes things slippery and easier to pull through the holes.

According to the Vancouver media this new system is to be completely digital, furthermore the media said that the type of digital encoding that will be used on this new system is not in use anywhere else except Toronto, hence there is not enough of a market to produce a scanner that can receive it. This apparently is being done to ensure that you and I will not be able to listen in.

Incidentally this won't only affect the Vancouver area, I have read that this new system is to provide communications amongst all police departments in BC, right through the interior, in other words we're all screwed !!

Thanks for the quick reply. I did notice that in Queens, I didn't hear anything on some of the frequencies listed on this page, and I was wondering if there were other changes made AFTER this list came out. Any info is appreciated and thanks for posting this link.

Gary

Who?
Methinks you have the wrong person...

Since you have it so ingrained in your head as to who you think I am, lets clear the air a bit.
I am not who you *think* I am. And now, we continue with our scanner related discussions.

Hawke

Greetings all,
Does anyone have the formula or know the spec.'s for cutting the radials on a RS 20-176 to optimize it for mil-air reception? Any help or suggestions will be greatly appreciated.

Happy Monitoring,
Bruce

1001. Question on a PRO-2006

Newsgroup: rec.radio.scanner
Date: 1999-05-10 00:00:00 UTC
From: Scott Dernbach <stalker@lvcm.com>
Message-ID: <926402095.437.86@news.remarQ.com>
Source record: 119154

I have a Pro-2006 scanner with a OPTO456 Lite board installed, and all has been working GREAT until recently. When I turn the unit on sometimes it will work just fine (In normal & opto control), but sometimes it is just locked up from the getgo. NOW when I turn it on the display will stay BLANK with only the backlight working....when I access it from the opto board it works fine, just no longer a display when not using the opto. When the unit locked up before, a simple process of un-plugging the unit from power, and turning it on fixed the problem, but no longer.

ANY and ALL help would be greatly appreciated, as I use this radio regularly!

Thanks,

Scott

But Glen, even if he was selling the interface bundled with MDT software, and he wasn't, what law was broken. Can anybody show me a WRITTEN law prohibiting intercepting MDT transmissions. There is a very specific law against intercepting cell phones and pagers but I have not seen any applied to MDT systems.

Seems it would be kind of hard to prosecute for violation of a law that doesn't exist. Of course our government may not be bright enough to realize that.

One of the news article I read said he did send the software on floppy with the data slicer which I believe is what bit Bill. As far as what laws were broken, I don't know exactly what angle they are using. Bill had a disclaimer on his WWW page, what was his concern? I do know that Bill Cheek is not the only one selling data slicers so the question also remains why was Cheek singled out? Could it be he was the only one bragging in public that his slicer could do it? Could it be Bill was easily led around (5 times) by the government and showed off his knowledge skills to the wrong group? We probably will never know.

> Can anybody show me a WRITTEN law prohibiting

The bad news is an old cliche. We the people are the government and I have no defense when you say that we the people are not bright enough.

Sorry, I took it as typical right wing Republican ramblings. How you could expect cries of foul toward Clinton to "get some "factual reaction" as to what the issues are" is beyond me. I doubt Clinton knows Cheek or what MDT is.

> Now I know. Thank you.

I don't know what you now know but you are welcome.

> Now, was what Bill Did illegal?
> before they made the law
> or afterwrds...?

Don't know. Wish we could have Cheek tell us. He had the disclaimer on his WWW page. Wonder if he sent the discalimer with the software he supplied the SS agents.

> and if so, how does it affect
> the security of the usa or citizens
> of the usa?

We all are going to die some day.

> what is the issue about when he gets
> arrested...especially by an Eastern
> Court of the Federal Body

He was an indirect party to another alledged crime, the fool in NJ posting MDT communications on the WWW. That is what brought Cheek to the attention of the East Coast boys.

> you see, you never reported what was
> the issue from my first request.

I am not a reporter Bill. Did you not read the different media communications about Cheek? maybe you should start there. Posting religious right Republican plank speeches won't cause anyone to report about Cheek.

>Any direction to lead me would be greatly appreciated!

Here are two things to consider:

(1) Get an attenuator and see if that helps. For every dB of
attenuation you insert, you should get twice the reduction in
InterModulation Distortion (IMD) products.

(2) Try using a directional antenna.

The first item will work if the problem is simply on of IMD. Scanners
are designed with frequency coverage (broadbandedness) and sensitivity
first. Dynamic range (immunity to IMD) is usually a secondary concern.

If the attenuator doesn't provide a two for one improvement, then the
noise may be coming from the outside. That's when you should call
your local FCC field office. However, I'll warn you, the first thing
the FCC checks is the complaining person's installation. It's a well
known fact among investigators that the majority of interference
complaints from the public are problems with the receiver, not the
transmitter.

A second possibility is that some hardware is corroding somewhere the
tower or a radio receiver somewhere is rectifying the paging signals.
In this case, the IMD is a real, radiated signal --not a product in
your radio. Finding something like that can be a serious technical
headache. IF the problem is on the tower itself you may be able to

get the site manager to correct it. In many cases, however, the problem is often a neighbor with an antenna amplifier which is distorting and re-radiating the signals. If that's the case, you'll have a terrible time finding the culprit. Many if not most of these cases go unresolved because damned few people have the diplomacy, technical ability, and authority to track these cases down.

I wish I could be more upbeat about all this, but frankly, you're not going to get much help from the FCC unless radio and TV stations are really getting stepped on. And the complaint would have to come from virtually everyone living there to get their attention.

Good Luck (you're going to need it).

Well, I would like to let you know that I have a handycap. I never got any free rides from anyone. I got my license in the 1950's when people had to draw diagrams and know the answers to the questions and send and recieve code. I couldn't draw diagrams, so I had to explain what they looked like. Noone gave me anything and that is the way I prefere it. That way, I don't have to pay anything back later. John Fearon w4wkp, Loganville, Ga.

Hi Glenn,

I can't add anything to the above story. But I do know for instance
there are many companies that sell illegal Cable and Satellite TV
descramblers - but they'll never comment on theft-of-services and
illegal use of their devices to potential customers. In fact if you tell
them, "Yeah, I wanna watch the Tyson fight for nuthin', man", they'll
probably tell you to get lost!

You need to get a sat tracking program and the orbital data.

Here's where:

Tracking software:
http://www.dransom.com/

Orbital data:
http://celestrak.com/NORAD/elements/index.html

Or go here on the web for live Mir track:
http://liftoff.msfc.nasa.gov/temp/mir_loc.html

" ... I thought it odd that I can easily sidestroke a half hour without rest, but come close to full exhaustion treading water for ten minutes. I also didn't understand the breast stroke until I tried it in salt water. It's as easy as they say it is, if you carry enough body fat. As I said, a 2mm shorty supplies what nature gave the rest of us.

For the group's info:

What you said makes perfect sense. The breast and sidestoke are "survival" swimming strokes. The stroke itself contains at least a fifty percent rest at the glide. This is what enables the swimmer to travel very long distances without tiring. The idea with these strokes is to generate as much glide as possible. Treading, OTOH, is a one hundred percent work stroke. I'll take the former over the later any day. (:-]

Try <<The International Directory Of Civil Aircraft>> by Gerald
Frawley. The 1999-2000 edition is just out so don't get an older one. It is
published every 2 years - alternates with a similar one on Military Aircraft
- and is available at Borders and likely via Amazon as well.

You know, guys, it's no fun to sit hear everyday and hear your profession trashed constantly. Yes, I'm a reporter. And I'm also a scanner user and a shortwave listener.
I'd imagine there are some plumbers here. And I'd guess that a few of you regularly pad your bills and overcharge customers. But not all of you do (I hope).
And I'm sure that not all the auto mechanics that own scanners replace parts that their customers' cars really don't need. But I suppose a few do.
And I bet that not even all lawyers are crooked (although that may be hard to prove).
The point is, there are good journalists and bad reporters, just like there is good and bad in every profession.
The big problem is that reporters are asked to be instant experts on different subjects every day. There's no way that a mistake won't slip in now and then.
Yes, I admit. Some reporters tailor their stories to fit a preconceived idea. But those guys never really make it, 'cause sooner or later they'll overlook a really good angle just 'cause they were too focused on how they thought the story should go.
Remember, Watergate started as a story on a third rate burglary. It would have been real easy to write up the burglarly arrests and go home. Only by checking into the suspects' backgrounds and discovering a link to the CIA did the whole thing unravel.
I don't know what kind of story this guy will write. But I do know that if he screws it up it won't be because it wasn't given the right kind of information.

If you find one particular plane you're curious about, write down the registration (N-number) near the tail. Then log onto www.landings.com, go to "Search," and type it in.

You'll get the make, model and version (i.e., 737-200), engine type, and who owns it.

My understanding of why we still have morse code as a requirement is simply because of international agreements. In order to work DX, the ITU still requires a code proficiency. What speed varies with the country issuing the license, so the FCC could easily reduce the speed, but there would still be the minimum requirement.

I consider myself an "appliance operator" and haven't used code for a long time. I am one of those that would like to see it dropped as well. We are not preserving a tradition, trying to keep anyone out, or making ourselves an exclusive group. Amateur radio should advance the radio art, have a trained pool of operators for emergencies, and improve international relations. These can be done without CW, but until the ITU changes its policy, the FCC has no choice.

that brings up why he was arrested.

who lodged the complaint? when a complaint
is lodged and filed and then served,
is not it then revealed what law was
broken?

if no law exists which Bill allegedgly broke
then what is he being hassled with
to make him out to be guilty?

if no law exists then whoever complained
to the authorities convinced them that
some law had been broken.

I would think that Bill would e-mail one
or two of us he trusts and allow us to know
what the charges were exactly.

And an eastern Fed court beginning
the process is harassment too. Why did they
not file the brief in San Diego Federal Court?

who is pulling who's strings on this
one?

Is that dBa or dBd ? :-)

If you want to concentrate on signals from a narrow field of direction say
10degrees or less then it probably would be useful, otherwise you had better
have a good rotator and tolerant neighbours - Oh and a strong roof otherwise
you might suffer from the helicopter effect ;-P

For those who want to use a Pro-90 mobile, try this:

Rubber Queen cell Phone Holder (No. 5144), when adjusted a bit deeper than off the shelf, fits the Pro-90 fits like a glove. I got mine at Walgreens Drugs.

I cut the holder about 3 inches down on the back, then mounted it using adhesive foam mounting squares to a pedestal mount. Looks professional and works great.

I don't know if you should have been passed.
I've asked people to leave swimming classes because
they could not float at all. Their bodies just
sunk. Upon showing them how to do a basic float with
sculling, they went under every time. on back and on
stomach and on side.

If they don't pass the float test they cannot go on.
The extreme non-bouyancy of their bodies impossible
to overcome in the water. Like dead weights.

I remember in Scuba classes one woman who could not
stay afloat...just sunk every time
she was told the rules state she has to FLOAT. or
seek another sport to learn.

or move to a salt-water environment to help.

maybe.

hard decisions, but if no able to float, then
it's hard to teach. One guy over in rec.
sport.swimming says that he cannot float and
learned how to swim. Can be done. But he
also gets tired out more.

you are pulling dead weight...that's why.

your weight is working against you.

If i was asked to be your Scuba partner, I'd
defer. I'd be afraid of your problem underneath

overcoming you and taking me down with you when you see me and grab me from behind and will not let go...i'd get out of it, but at what cost. to me or you.

i'd think that swimming would be your non-participating sport in more than 3 feet of water. Or high salt content.

Oh you so very smart people are going to feel like heels!
1. As for the name being messed up, if me and my wife
don't up date our listing, than stands to reason that she hasn't
fixed her misspelled name either duh
2. As for the tinker commander, I work for Awacs not the tinker
commander which is ACC command under the LG in the 552 CRS my duty
phone is (405) 734-2322 My title is Staff Sargent Walkowicz in the
Com/Nav/Ew shop
I don't know my commanders phone no. right now but here is the base
operator (405) 732-7321
Ask for the component repair squadron commander no.
But don't bother calling mon it's a down day we have it off K nuff
said
3. As for time I have been working my ass off trying to get anything
I can find
in the rubble and move it across town into storage. I work
anywhere from 8am to 11pm non stop
I am very sore and tired but would still like to scan when I can to
help relieve the stress of 8 to 11 EVERY DAY after the tornado (that's
a week tomorrow)
4. As for god blessing me HE DID!! My wife,3yr and me came out of it
with no injuries
5. As for a rat bastard send me your phone no. and I'll speak to you
privately
but it will be collect seeing I don't have the money (the reason in
the first place)
6. Call the postal office I have my po box at and ask who owns it
with a real address of 3373 Del Aire place
Del City OK 73115
Do what u must, BUT I'm for real
come on down ,I show u first hand what 311mph winds can do and even
let you meet my commander if he is not busy!!!!
If this isn't good enough I'll scan our tickets in and post them too
May god STILL bless you
wookie

this is my friends computer who's house i'm staying at for now

Your students deserve better than you showed them. I thought it odd that I can easily sidestroke a half hour without rest, but come close to full exhaustion treading water for ten minutes. I also didn't understand the breast stroke until I tried it in salt water. It's as easy as they say it is, if you carry enough body fat. As I said, a 2mm shorty supplies what nature gave the rest of us.

I think a swimming instructor -- you are the instructor, right? -- who won't teach that much perhaps shouldn't be teaching. Which agency issued your credentials?

I passed the "float" test by treading water for the full period; that's not fun for an old fart. I also dive recreationally in the tropics only, wearing at least a shorty. I've since learned that half-full lungs are enough for neutral buoyancy in salt water; the shorty is a safety measure. Near home, for training dives, 3mm full suits are required even in the hottest part of summer. As I said, Dingleberry, I am 6 lbs negative in fresh water. A 3mm full suit makes me 12 lbs too positive.

Don't worry about being my partner. You pack far more baggage than I. And, yes, I passed the test legitimately, without special consideration.

Michael.

By the sound of it, the lawkeepers are making things up as they go, which is nothing new. If a lawperson (policeman, etc.) sees something they think should be wrong, they will accuse a person
of it, maybe even give them a ticket for it or arrest them and if a law doesn't exist to support the policeman,
then many times a presiding judge will make a law on the spot to support a police officer's claims as long as they
are reasonable and are not too complex or shady.
I've seen this alot esp when it comes to disturbing the peace and public indecency acts which aren't specificly
covered by law but can be considered improper actions to some.

While the scanner is in the scan mode, just punch in the number of the channel you want to lock out. Do the same to add the channel back to the scan sequence.

Enjoy ... they are great little scanners ... I have 3 ...

Question:

I have been thinking about getting a good wide-band receiver for
SWL-ing on both HF and also on VHF/UHF, but I find comparing specs
on various products out there confusing, conflicting and incomplete.

Has anybody had any experience with the unit, compared to other
receivers out there, both HF and wideband? Specifically, how does
it do in the noise dept? I have heard widebanders are pretty dismal
in the HF range, so it would be nice to find out its strong weak points
before I get off almost a couple of kilobucks.

Sensitity specs are difficult to interpret - some receivers that boast
very low microvolt sensitivity do terrible (too much noise - hiss and
environmental) to grab weak signals, especially in a location that
is less than great to begin with.

If its a dog, what are good units out there to consider?

Thanks,
Pat M/HW

Agree!

> And speaking of slower speeds, people that copy only
> in their heads have difficulty with copying 10 wpm qsos.

And with that: Too slow and you cannot copy words, only letters; then I must write it all down.

1078. Need help with a broken Pro-2030

Newsgroup: rec.radio.scanner
Date: 1999-05-10 00:00:00 UTC
From: Matt Fuller <fee@global2000.net>
Message-ID: <K6wZ2.1638$LP2.31231@news6.ispnews.com>
Source record: 119284

My Pro-2030 died on me several months ago, and this week I took it out of storage and started tinkering, and I appeared to make progress.. I'm hoping that by some off chance someone has seen something like this before, or would know where to turn (please don't laugh too hard at my "testing" methods) Okay, on with the details..
One day the scanner just stopped working correctly (it honestly had nothing to do with trying to mod anything at the time)
The audio was drastically quieter and the squelch appears to be always open.. I can hit the scan button and it will cycle through fine one freq at a time, but it stops on every freq. All keypad functions appear to be working properly. Thinking all was lost, I do what I always do in a situation like this and took a fork and started dragging over the board hoping for that miracle "POP!" that would return it to it's normal self.. :). This is where my hope peaked again... I can now get it to scan by shorting out different points on the board, and I can make the audio louder with the same method at different points.. However, when I get it to scan this way, it doesn't stop on active freqs, and the audio doesn't seem exactly right (it sounds more muddled than I remember). Well, that's all I can think of.. if anyone might be able to help with more information, just email me and I'll do my best. If anyone might be able to fix it themselves, let me know.. I wouldn't object to spending a few bucks to get it working again.
Thanks for your time,
Matt

I have the following Radio, and electronic equipment for sale. Will consider trades for Electronic or computer EQ. All working last time tested unless noted. Shipping is extra.
Thanks

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

Non Tube Items:

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. Asis$50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both.

Bearcat 250 Scanner: Have two. One working and one for parts. $75 for both.

Kenwood MC 50 Mic: Works OK and comes complete with cable and input jack. $50

These guys are less then 3 miles from me in Newington so I have never had anything delivered I just went there and picked things up. They are very good and I would recomend them.

I bet a lot of folks who work at the ARRL get their stuff from them too as they are only about a mile from the ARRL Headquarters.

This is ridiculous. This is just like saying that because a few people with scanners make nuisances of themselves at incidents by "playing cop" that all people who own a scanner are the same breed of idiot. Don't you see how stupid that sounds? I agree with JT. Everyone should be judged on his/her own merits and not solely upon their profession.

And to think, this all started because an actual reporter posted a simple question in a take-it-or-leave-it manner. What, you don't think he's reading this forum now? I'd bet that he is, and when he sees how cynical, stereotypical and suspicious people have been in here, you can bet that'll be the focus of his story. Congratulations guys. Once again, we've taken an opportunity to educate the public (you know, the people who vote) and flushed it right down the ol' crapper.

What if the only people who contact him are folks like Emilio Goldstein? Then who's to blame if the guy writes a lousy story? Not him....

Something to think about.

Could it be that the chain of events started with a certain MORON posting MDT interceptions on his WWW page? This certain MORON then cries ignorance and points the finger at the stuff he got from Commtronics. Police call police call on Cheek and the rest is history. So far all this has followed a logical sequence considering the personalities involved.

From: Mike Dixon <mdixon@mpinet.net>
Message-ID: <37386BF6.89354C79@mpinet.net>
Source record: 119098

I was in a second floor apartment for several years and had great luck using 1 1/2 inch PVC pipe set into Christmas tree stands. I had a RS discone set into one and a 4 element 2 meter quad complete with rotor set into another. I just moved them in and out of the sliding glass door to the balcony as needed (it did clutter up the living room just a bit but I didn't have much company then). I also had a small tree just outside the balcony, so I rigged an L shaped section of PVC and put a Cellular Communications military air band antenna onto one leg and a tee fitting onto the other leg with a foot or so of PVC out each end of the tee. Then I spray painted it all dark brown and used some steel strap to hang the contraption from the top of the balcony with the antenna holding leg straight up outside the balcony and behind the tree.

Mike

Message-ID: <7ha34sges1@holly.prod.itd.earthlink.net>
Source record: 119107

I have a DeLorme Tripmate. Overall, pleased.

I just recently realized why it sometimes takes a long time to 'power up' (it may be trying to load some kind of atlas') and that the batteries are crucial.

In that regard, I see that DeLorme sells, for $40, a kit to power the think off of either the mini-din connector on a laptop for a keyboard, or directly from the car lighter socket.

It APPEARS that the kits just apply power to the RI pin on the DB-9, then in the unit itself you have a small shorting plug from the center pin of the battery connector to the (+) pin. I'm assuming you can apply +5v only to this pin.

Does anyone have one of this kits they can look at? Have I hit it fairly accurately?

I'd by the DeLorme kit, but the $40 kit includes the direct lighter adapter I have no interest in at all. So if I can make up a little DB-9 M-F feedthrough and tap in to pin 9 for the RI from a keyboard plug, I can save myself some money!

About all I can suggest for you is to check the local pawn shops and thrift stores when you get a chance (you never know, I found a perfectly working 16 channel base scanner in a thrift store once for $4). I seriously doubt, in this skeptical world that we live in, that anyone will send you anything for free. There are tons of ripoff artists out there, and the internet is their playground. You can't blame people for thinking this was a scam. Even I am a bit skeptical still. I would think someone in your situation would be less concerned with their "toys" and more concerned with the necessities of life. I know I would be.

Best of luck to you, regardless.

1107. Weak Signals on 243 MHZ

Newsgroup: rec.radio.scanner
Date: 1999-05-11 00:00:00 UTC
From: wb5agz@dc.cis.okstate.edu
Message-ID: <7ha6cdekg1@lotus.onenet.net>
Source record: 119113

I can hear very weak signals on many frequencies between 243
and 244 MHZ. I am receiving them through a diskcone antenna so the
signals aren't much above the noise level, but a few things strike me
as interesting.

They never really vary much in strength so they may be from
military satellites. There is no Doppler shift or fading but they do
not seem to increase with atmospheric ducting when other signals do
get better.

Most of the signals appear to be data channels of some kind
but one or two seem to have voice on them. They are just too weak to
demodulate. For all I know, the voice may be a harmonic from
something else. There is also another similar spectrum of frequencies
near 248 mhz with a number of really wobbly sounding carriers and some
that sweep back and forth such that if one listens to them with a BFO,
they sound like a fire siren.

What are these? Can anybody say without being killed?:-)

I went with the CE-232 because it actually programs the scanner with freqs. I believe the OS456 lets you scan files in the computer but not load them into the scanners memory. SInce I travel I like to take the freqs with me. Also, I can use the CE-232 to auto program my handhelds. With the Pro Turbo software the CE-232 is a dream. I do not and have never owned a OS456 though. However I have 3 2006's with ce-232's. The PT software allows you to record in a bunch of different ways. Like instant record, or loop record so you always have the last 40 minutes of whats happening, or record only the channels you want or all channels at once. THere are also meeters which can be configured for whatever you wish (with some additional circuit mods). I have the center tune meter and s-meter hooked up. I could go on and on but it would be easier for you to find the Pro Turbo site to find out what all it can do. From all Ive read and what I like to do I would recommend the CE-232 and Pro Turbo software. Ira Cooper

The reason it takes time to get going is that it takes a minute or so to
identify and track the various satellites. There are 24 or so birds, and
up to 12 can be seen at any time. 3 or more are needed to get a 3-D fix,
and it usually takes a couple minutes.

While the Trip Mate does not have it's own display (it relies on the
computer and software) different units with displays will show the status
as it goes.

Within the software see if there isn't a GPS Status option that allows you
to view the acquisition of the various satellites. It really has nothing
to do with the power connector.

My copy (purchased on Monday in St. Louis) shows a 1999 copyright (as by "Aerospace Publications Pty, Ltd") with an ISBN of 1 875671 42 0. Have Borders do a search on the ISBN. The identical titles with a minor difference in subtitles often get lost in computer listings. Best bet would be to go to the local Borders and double check the cover before you buy. I KNOW Borders has it as that is where I bought mine. The average Borders employee is a bit of a waste of time. Counter cultural appearance seems to be regarded as more of an employment asset than diligence, intelligence, the ability to listen to and understand customer inquiriess or other good work habits. Naturally, books about things like airplanes, radios, real history (as opposed to conspiracy laden trash) are viewed with disdain and disfavor as compared to "serious fiction" and Gen-X fads. Good luck!

I don't have a CE232, but have heard good things about it. I did not
however relish the amount of work involved in installing it. I therefore
bought an OS-456 (and later an OptoCom). The OS-456 went in in about 15
minutes, with no soldering. The only tools needed was a phillips
screwdriver and a pliers.
The OS-456 does not support loading of freqs like the CE-232, but when not
connected to the computer it operates like any other PRO-2006.

I later got an OptoCom. It used the same software I had been using on my
OS-456 (PROBE) but I needed a gender changer since one radio has a male,
the other a female DB-9. Alternatly I could have used the supplied cable,
but it was easier to use the gender changer in my situation.

As for software I have prefered PROBE since I first tried it. It works
great, scans fast, and produces great logs. It is easy to set up, and as
you learn the program the features get better (there are so many that you
need to play with them to figure them out).

>.......E Meyers......

Your kind of saying this but I wanted to clarify it. Look at the voltage
of the wall wart that came with the scanner as opposed to the battery
voltage the scanner uses. My Bearcat uses a 5V battery pack but the power
supply is 12 volt so I would use a 12V battery if I were to do it. I have
a car cable too which pretty much covers supplying power to my scanner.

I've got a Discone so I can't say but I thought I'd comment on your mast. I bought some PVC pipe and put it on top of my carport roof till I needed it. It was there for maybe a month. When I brought it down, it was quite brittle. When I used the cutter on it it tended to shatter. Up on the roof the pipe will get a LOT of UV radiation which is probably what is making it brittle. I haven't tried it as an antenna mast so I can't really say if it's going to snap but I'd be concerned.

George,

Your HOT frequenciy of 11300 has nothing to do with Kosovo
that is an ATC frequency for air traffic, Cairo,Khartoum etc
for civil a/c traveling down over africa.....

Paul..

Yes, I agree!
I have two cascaded intermod filters inline with my scanner, and they worked very well for the last few years. But again, lately they haven't made any difference any more.
One nice thing is two other nieghbors in the community are amateur ops, and they have also been griping about this problem lately. So the three of us are polling the rest of the neighborhood, and getting some data compiled for use with the FCC, Altel, Motorola, and some of the other companies leasing the tower.
No anger here, mind you, but it's got to be cleaned up.
I'll keep trying! Thanks again!
Mike

Since it sounds like you have not yet made your move, choose your new
apartment carefully. Get a unit on the highest floor possible, and put
your antennas out on the patio. I used to live in a 3rd floor
apartment, and the patio had a concrete floor and wooden
posts/railings. You can mount the verticals next to the wooden posts
and they're practically undetectable; you could even put a dish out
there, cover it with a tarp, and to the casual observer it looks like
a table with a tablecloth over the top.

1145. ICOM 8500 dead -- diagnosis?

Newsgroup: rec.radio.scanner
Date: 1999-05-11 00:00:00 UTC
From: efricha@alumni.cs.colorado.edu
Message-ID: <3737bea5.4190054@news>
Source record: 119172
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

Greetings, all...

I have a three month old ICOM 8500 that decided to die on me. The symptom is pretty simple -- the frequency display flashes when it is turned on. There's no sound whatsoever, but you can "tune" in the sense that you can change the displayed frequency at the appropriate steps, you can change modes, filters, various settings, even reset the CPU, but it just sits there, flashing away, a very expensive paperweight.

I'm hoping someone has run across this and it is something simple like reseating a connector... I'd rather not be without it for 6 weeks while it goes off to ICOM.

Can anyone shed light on this?

Thanks,

Eric, KB0YDN

to the unknown reporter:

are you wearing your brown-bag over face?

what spike says has merit. I've been interviewed
for both tv/radio and print media.

They always seem to have an angle to throw out to
readers or viewers that sets it apart.

No matter how you relate it it comes out sounding
cut-up, puzzled into different parts and given
emphasis on what does not really be that important
but seeing as how you said it it must be important.

then they miss the important stuff.

for newspaper: three or four times.
always some lapse of facts or what
was really never said or really
never meant to say. But it's
there.

for tv...three times: they take a mistake
sentence you did not make right and then
make it right for their purposes when they
edit it.

and this was for a book I wrote. It came
out no way as for what it was intended for.

so what spike has to say holds much volume.

or the reporter who comes from newspaper to
interview you and has no idea what
questions to ask you and you help her
with that and then she uses facts from
another story done some years ago to
be filler because she did not know what
to ask and how to present it.

but then there was a news reporter for the
San Fran Chronicle who did an interview of
me last year and it came out pretty much
as I related it. Just that instead of giving
me a few paragraphs as promised he gives me a
line-quote.

but it was good as said. He summed it up
correctly as to what point I made about the cops.

cops liked it too.

it's hard to know what a reporter has in mind as
the end-goal, because they deal with so many variables
every day they change so often based on the results
of what is gotten from working on it for a week.

Thanks for the reference Jim! But the article you refer to is a
review and not intended to educate one on how to run their radio!
;-)

Perhaps someday I might get around to writing an Owner's Guide
for it as it seems lots of owners do have problems with this
radio's Owwer's Manual. And I understand this as I pointed out
in my R2 review that this is THE worst manual I have seem from
iCOM. And even I had a tough time following the illogical "flow"
of the manual (and I own 7 iCOM models!).

1150. Re: Status Codes for Ambulance Patients

Newsgroup: rec.radio.scanner
Date: 1999-05-11 00:00:00 UTC
From: bill carty <bcarty1@csi.com>
Message-ID: <3737D3A2.64400EF0@csi.com>
Source record: 119177

it may be something local. Each ambulance service, and each paramedic service use codes that have become local practices. A good case in point is Columbus fire uses a code one signal to denote a DOA, or death at a fire scene, while the red cross uses I have a code 4 at my scene which means I have four dead victims, and uses the phrase I am on channel one when they can't talk on the radio with out others nearby hearing what is said. All of these codes are specific to our area, and are not used else where. You might talk with your local radio shcak siometimes (not always) they have a list of codes and signals used by EMA, EMTs, and others in the area they serve.
regards,
Bill C.

Yes, use this one:
http://www.forthnet.gr/sv2agw/start.htm

it is excellent for decoding and it transmits as well just a sound card
needed for monitoring and an hamcomm interface for transmit

As a former Radio Shack employee, I can tell you that as far as rebates and offers go all Shack stores will be the same with the exception of Cellular Phones. Each Cellular carrier in a different city will offer a different promo but as far as scanners go the prices and deals should be the same.

If a Radio Shack in your area does not have a particular scanner in stock, its because the store manager did not bother to order it. If you know you want a particular model, you can have it sent directly to you Via a service called NMQ.

As a tip, if you're looking for a deal sometimes it pays to visit the smaller low-volume stores that might not move clearance merchandise as quickly as a mall store. Usually, discontinued merchandise will drop in price about 10% a month.

Source record: 119185

Hi everyone.

Well, here is my problem... I'd like to install 2 soundcards on the same PC (under Win98) to perform a good digital modes reception. The first one may work with Chromasound, to perform a DSP filtering of the weak signals, and the second one should be used with a digital mode decoding software.
I didn't get any success when I tried to install both a Vibra16 (creativelabs), and a PCI64 clone from Ensoniq. Well, these cards are pnp, the system accepts to install them, but after there is no way (of my known) to use the two cards. If one accepts to work, the other one gets conflicts.

Can anyone help me to do this, please ?

: I have a Pro-2006 scanner with a OPTO456 Lite board installed, and all has
: been working GREAT until recently. When I turn the unit on sometimes it will
: work just fine (In normal & opto control), but sometimes it is just locked
: up from the getgo. NOW when I turn it on the display will stay BLANK with
: only the backlight working....when I access it from the opto board it works
: fine, just no longer a display when not using the opto. When the unit locked
: up before, a simple process of un-plugging the unit from power, and turning
: it on fixed the problem, but no longer.

: ANY and ALL help would be greatly appreciated, as I use this radio
: regularly!

: Thanks,

: Scott

Prehaps one of the connections between the opto board and the scanner is
either loose or oxidised.
Try unpluging the connectors and plugging back together again....I suspect
your problem will be solved.

Ther have been some confussed people wondering about the voltage
their radio needs.
I am unaware of any comercial radio that has internal regulators to
step, asay, +12V down to whatever.
Count the number of cells that your battery "pack" holds.
My Pro34 holds a total of 6.
So... 6X1.5=9.0V
My RF2200 (yea it is not a scanner but it is a radio!)uses 4 "D" cells
for a voltage of 4X1.4=6V
This is why nicads are not alway a good choice.
6X1.25=7.5V
4X1.25=5V
And this is for freshly charged batteries.
My Pro34 is nearly deaf on nicads.
But you still must be VER CAREFULL about either connecting power to the
battery terminals or to an external power jack.
My Icom gear has the shell negative/ground and the tip positive/hot,
and some of my radioshack gear has the sleave hot/positive with the
tip being negative/ground.
And while a lot of radios have a "protection" diode [that robs you of
another 0.7V), not all radios are so equiped and radios sure can stink
when fried.

Thanks for the information. I suspected that they might be geosynchronous satellites, but I wasn't sure. As for wide-band carriers at 250 MHZ, I don't recall hearing anything. I live in a neighborhood of mostly single-family houses. There is an amazing amount of crud audible from slight cable TV leakage, the harmonics of the local oscillators in FM radios and televisions as well as other unidentified signals which I believe to be EMI from the clocks in nearby personal computers, etc. It is quite possible that the wide-band signals exist, but were missed due to the other stuff which is purely local.

One time, I thought there was something exciting going on. I heard a strong signal which seemed to be coming from a moving automobile. I thought it might be a eaves-dropping device of some kind because I could hear music and thought I heard voices. The frequency was around 230 MHZ. After listening off and on for a day or so, I realized that I was listening to the second harmonic of the local oscillator in my neighbor's car radio. The neighbor was listening to a local FM station at 105.5. The oscillator was at 116.2 which doubles to 232.4. The music I heard was just a bit of secondary modulation caused probably by an AFC circuit in the car radio which tried to pull the oscillator exactly on center, nothing any more exciting than that.

Another time, I picked up a strong wide-band signal in the 280 MHZ range. This signal swept back and forth a few KHZ at a rate of a couple of cycles per second. I could hear sound on this carrier and I realized that the sounds were coming from a group of guys laughing and talking outside of a car which was near our house. The audio was not good like might come from a good microphone, but rather basy and strange as if it was being picked up by something sensitive to vibrations such as a motion sensor.

I think that what I was listening to was some sort of car alarm or related security device that sends a signal back to the owner's receiver. The sweeping carrier was probably no more than the effect of a blinking LED on a very voltage-sensitive oscillator. I truly don't know. I am just guessing, but the frequencies between 215 and 420 MHZ can hold some exciting listening at times. You do have to be patient, however. There are lots of MHZ with absolutely nothing that an ordinary person can make heads or tails of, and then something will come along that really grabs one's attention for a while.

My AR8000 steps 12vdc down to 5Vdc(4@1.25), my bc2500 steps it down to
6.25v, and if i felt like getting out my pro 90, well i'm sure it would
to. Aux power adapters and internal operating voltages are almost always
different.

Just another example of criminalization by govt decree of something otherwise legal being labelled as illegal via semantics. Back in the "old days", any idiot in the radio/electronic hobby would know a "radiator" meant it transmitted RF, now all Big Brother needs to do is call something whatever would conveniently put it under a Big Brother controlled rule. This opens the door to Big Brother dictating how we can configure our PC's as they often have Part 15 stickers. If scanners can be controlled just by sticking them into Part 15, just think of all the appliances and devices out there that bear Part 15 compliance stickers the Feds can now tell us how to use. Pretty much gives the gov't the legal right to "unauthorize" just about any techy thing we use as individuals.

I have used a beta version of the software both with my Palm III and with POSE (the emulator software used for testing and debugging Palm software). I found it to work well the few times that I used it. I haven't used it all that much because it is bare bones software -- fairly equivalent to the optocom.exe program that comes with the radio.

It does have its own scanning engine, with skip and lockout functions (as I recall). It doesn't support any frequency database on the Palm or alpha-tagging. In January I spent some time with the source code trying to build something for that functionality, but various other commitments led me to set aside my efforts.

I don't know that I'd buy a Palm just for use with the Opto. I'm happy to have the software since I have both already, but it's not a full-featured commercial package (nor is it meant to). Hopefully other developers will pick up on the base of functionality that's available in source code form from Optoelectronics and come up with some slick stuff for the Palm, but it's not there yet. Better yet, I hope I'll have a chance to return to my project with it.

I've heard that WinCE software is under development for the Opto. If you're looking to buy a handheld solely for scanning -- it pains me to say it, since I love my Palm -- but that may end up being the way to go. WinCE devices, with their subset of Win32, are likely to get scaled down versions of Windows scanning software.

I have the following Sam's CB Radio Photofacts for sale...
Books cover radio schematics & aligning procedures
for different CB radios, as well as parts lists for each radio
(Volumes, 5, 11, 13, 19, 25)
Books are in good shape, I would rate them a high 7.
Books are used and have wear on the covers.
Inside pages are in excellent shape and all attached.
I have the radios each volume covers listed in a file
and can E-mail the lists directly to you if requested.
I would list them here, but would rather save the space
for others.
I am asking $7.00 each or all for $30.00

Prices are firm & includes shipping in the USA
I can ship COD, you pay shipping & COD charges.

If interested in all or part of these books
contact TRAMD300@aol.com

Thank you...

If #hamradio was started and ran by someone who insists that you use your callsign then sorry,
you either need to abide by his rules or leave the channel.
It is his channel you know, he can do whatever he wants in HIS channel.
I agree though, I sure the hell don't want people on the internet knowing who I am.
If I posted my callsign here, then someone could easily look me up, find my home # and address.
I don't want a bunch of internet freaks knowing who I am or where I live as the internet has proven
itself extremely dangerous with some of the kooks out there.

Carlos,

You may want to look at a Bearcat BC-350a. It's probably one of the most affordable and full-functioned scanners that you will find. It has good air band reception, but doesn't cover 800 mhz.
No direct-entry, but for < $100 at wall mart and probably half that used, it should do the job quite well.

73,

Gary

Source record: 119015

snipped>
> Man... amen and amen...
snipped>

Has anyone looked up the authorized use for 243.0 MHZ.
Unless I'm totally wrong it is used for emergency transmissions
related to Military - Air communications.
These transmissions would be AM mode.
The frequency 121.5 AM also has an Air emergency use.
243.0 was purposely chosen to be the second harmonic of 121.5

Happy Scanning

Rick

Odd that that nut cake has been real quiet compared to his normal 30 posts a day. Nut cake always posted, he didn't need Cheek to lead him on like a trained monkey. Now all of a sudden Cheek is busted nutcase quit posting. Lost access? New McDonalds opening? Embarrassed he got caught lying about the number of licenses he has? All of the above?

Yep, Bill was a man of his word about one thing. He quit the group on his own and stayed away. Nut cake said many times he would quit posting if Bill did. The rest is history and nut cake's version of history.

You are asking someone to conspire with you to commit a crime under federal law in the U.S. and international law outside the U.S. law. The Big M owns the copywrite on the software your requesting and pirating it is illegal under both criminal and civil law. Do you really want to involve someone esle in such a scheme?

In addition, any lab software is STOLEN from the Big M. It is not supposed to be available outside of there development labs.

From: corbin@ampere.physics.ucla.edu
Message-ID: <7hair7$79p$1@carroll.library.ucla.edu>
Source record: 119038

The data signals in the 243-244 region are from the narrowband (5kc)
transponders on some of the military's geosync birds (FLTSATCOM and UFO).
On the FLTSATCOM platforms, these are refered to as AFSATCOM channels...

The warblers are probably on the 25kc transponders - I'm not sure what
purpose they serve.

On a related topic --- has anyone else noted rather strong, wideband
data signals and/or associated carriers in the 250-300 MHz range?

Very well said about the program and interface, one thing he should know is that this is not a plug and play type of thing, you have to build the CE-232 and install it yourself or have it built and installed, great interface and with the Pro-Turbo software, it makes it even better.
You can find Pro-Turbo at
http://www.iaw.on.ca/~jabba/pro-turbo.htm

Steve,

When you program in a freq. such as that with a scanner with only four digits to the right of the decimal the display will round the number off, but the radio will actually be tuned to the freq. you entered. At least, that's the case with most of them. Go ahead and try the radio as it is. Chances are it will work just fine.

Hello Everyone.
I think everyone should take note of Don K Muth.
Don has founded on #undernet on Irc the channel #hamradio.
During a visit there using the nickname mrguard (irc doenst
require callsigns or anything), Don numerous times tried to
force me into using my callsign as my nick.
I told Don that my callsign is N8KGU and that i perfer not to use it on irc.
Some of the channels I know I dont want the others being able to reach me
via callsign servers.
Don asked if at Dayton I would use mrguard on the radio, I answered that
I am free to use N8KGU or KC8LAM, both are issued to me.
Don then proceeded to harass me and eventually kick me off of this
saying that it is his channel.
In a discussion under a different nick, Don admitted that he can
do as he feels and that he is free to chase anyone away from his channel.
plus:
<AH6KA> he came with nick and said he wudnt use his call and gave me static
so i moderated then he tried to use
both calls
<othercall> you gave him static
<othercall> he stated what both calls were.
<AH6KA> i shoulld have just kicked his ass

Is this how decent we want ambassadors of our hobby to be to hams and
to those interested in our hobby?
Several attempts were to tell Don that the hobby has enough problems on
40 meters as well as losing folks to irc and the internet.

Does everyone accept the fact that folks like Don can deem the channel private
and alienate everyone from the hobby?
My suggestion to Don was to form his own channel, maybe #ah6ka.

I would suggest that everyone visit Undernet on IRC and join #hamradio
feel free to meet other hams, use any handle you want.

You can Email Don at: Email: ah6ka@gte.net

Please dont let the hobby get ruined again.

Thanks Again
James
N8KGU

I have posted several pros n' cons of both interfaces. Here is a
repeat of some of my ramblings. There may be some others that you can
look up on www.deja.com.

Wiggie

To try to answer your question MAlexder, the CE-232 does in no
way allow a blocked scanner to receive additional frequencies. The
CE-232 is a button pushing interface that also has data aquisition. It
is capable on two-way interfacing with the Pro-2004/5/6 models and
one-way interfacing (autoprogramming like the PROgramit interface)
with several other scanners. Since this interface is mainly used with
the Pro-2004/5/6 models, then it is usually the case that where the
CE-232 is installed, then that scanner has the capabilites of
receiving cellular frequencies mainly because the hacker/hobbyist has
taken the time to do the appropriate mods to the scanner to enable it
to scan the blocked frequencies. The CE-232 (for programming and
scanning purposes) can only do what a human being can do when they are
pushing the buttons on the front of the scanner. If the scanner is
blocked then the user trying to program a cellular frequency is going
to get the same error msg on the LCD as if the CE-232 tries to program
it.
The CE-232 is a two-way interface because it also has data
aquisition. The CE-232 basically sits and waits while the scanner
chugs through the frequencies preprogrammed into the scanner. It waits
and listens until the scanner becomes active, the it captures the
datastream that is being sent from the scanner's CPU to the LCD
drivers. It sends this data to the computer where it allows the
software to know what frequency the scanner is now residing on. Since
the pathway between the CPU and the LCD display drivers existed on the
Pro-2004/5/6, then these were capable of having a two-way interface.
The Pro-2035/2042 has a newer design and the LCD display drivers are
incorporated into the CPU. This didn't leave the "tried-n-true" method

of data aquisition that was possible with the Pro-2004/5/6 models.

****NOTE**** This is no longer true though...through quite a bit of experimentation and some extra circuitry involving a PIC chip, the Pro-2035/2042 can be used with the CE-232 for a complete two-way interfacing just the same way that it is with the Pro-2004/5/6 scanners. The first prototype, we captured the data from the LCD drivers and converted it to the form of data that was evident between the CPU and the LCD display drivers in the Pro-2004/5/6's. This was a major bite in the posterior..but a learning experience. It became evident that capturing the data sent to the BPF switch and the PLL circuitry was much easier and dealt with a lot less wiring. Now the CE-232 doesn't know the difference between it being hooked up to a Pro-2004 or a Pro-2042. Is it worth taking the time to retrofit a Pro-2035/2042 so it works with a CE-232 interface? ...NO. Is this option going to be available as a commercial interest? ...NO. Is the information going to be out there for the hardcore hobbyists? ...NO. Why not?, because there are other avenues and better ways from getting from point A to point B.

The CE-232 was a marvel of its time, but there are other ways in which to doing things which are quicker and more efficient. I searched the internet until the wee hours deciding on the best option in which to control the scanner. I found that the best way was to directly tune the scanner via software on the computer. The CE-232 did not do that, but the OS535 did. The OS535 controls the Pro-2035/2042 model of scanner. There are pros and cons of each type of interface, but I intend to touch on most aspects.

TUNING METHODS AND DATA AQUISITION
Both the CE-232 and the OS535 are two-way interfaces when used with the appropriate scanners that they were designed for. The CE-232 uses a "button-pushing" method to allow the computer to control the scanner and it obtains data such as frequency and AM/FM/WFM from the scanner by tapping into the datastream between the scanner's CPU and the LCD display driver. The OS535 directly tunes the PLL circuitry and the BPF's. It aquires data such data as signal strength, scan stop (detecting a signal), DTMF and CTCSS tones, etc.

AMOUNT OF CHANNELS
The CE-232 uses the frequencies stored in the scanner's memory. If you have 400 channels with the scanner, that is what you have during computer control. If you have 6,400 or a turbo-whopper 25,600 channels, then that is what you have under computer control. The software is the limiting factor for the OS535 computerized setup. A popular program called Probe allows up to 99,000 channels in each file and I do believe that it allows 4,000 files! Need more channels, just kick out the code in QBasic, VisualBasic, C++, etc.

SCRIPTING
One advantage of the CE-232 is scripting...but is it really the interface? No, its just the software. The OS535 is very capable of

scripting just the same, its all in the software. It depends on the situation, but take for instance that you have some obscure frequency that you monitor on a regular basis. It doesn't become active very often, but when it does, another 20 frequencies become quite active. If the "flag" frequency is active, you want to be able to devote all of the scanning to these 20 frequencies for a certain amount of dwell time or until the channels no longer are active. This can easily be scripted with either the CE-232 or the OS535. The problem with the CE-232 is that it has to download these new frequencies to the scanners memory banks or has to switch to a bank that the frequencies are preprogrammed into and shut off all of the other banks. Since the OS535 controls the PLL circuitry, the software can switch over and have these new frequencies ready to go while you are still listening to the transmission on the "flag" frequency.

AUTO-PROGRAMMING
The CE-232 allows the programming of 400 channels, 6,400 channels or even 25,600 channels. It can do up to 999 channels at a time though with current software. I don't know if there is a easy way to switch between memory blocks easily while programming, but it would be an add-on feature. The OS535 bypasses the scanner's CPU and memory chips and is not capable of programming the frequencies into the scanner itself for operation without the computer interface. There is the PROgramit interface which allows you to do that for a resonable price. The PROgramit interface comes in several flavors...serial or parallel port designs. You can piece it together on perf-board or order a prefab PCB. Costs are from approx. $15 - $40. You can opt for external or internal versions if you want to use one with more than one scanner. I have placed several PROgramits in scanners that have the OS535 boards in them already. I like using the serial version of the PROgramit and just tap off of the DB9 of the OS535. You use the same serial cable of the OS535. Just shut down control of Probe, ScanCat, etc. and fire up the software for Probe. I have a external version of PROgramit for programming my Pro-43s and my BC3000xlt. The circuitry of the PROgramit is easy to add to control the memory blocks of a 25,600 channel Turbo-Whopper Pro-2006 so you can program many of them at once without flipping DIP switches.

TRUNK-TRACKING and OTHER FREQUENCY HAND-OFF TRACKING
The CE-232, OS535 and PROgramit all are capable of doing just that. It pretty much is in the software. There are several free and commercial programs for trunktracking for the OS535. There are a few programs that I have seen for the PROgramit and I have heard about a program or two that incorporates the CE-232. As for speed...the OS535 is by far the fastest. Then it is the PROgramit and the CE-232. The latter two tend to take a bit too long to switch over to the new channel to get the complete transmission efficiently.

COSTS AND INSTALLATION
The CE-232 runs around $150 for the kit or $200 for a built and tested interface. You can also put one together by yourself. The

Motorola uPU sometimes is a tad hard to find though. The OS535 is going for $180 now. It comes built and tested. There are also other features of the OS535 such as CTCSS and DTMF decoding and s-meter circuitry. While you can add circuits to do this with the CE-232, it just adds to the price and what you have to install. The OS535 is fairly easy to install. You have to nibble out the little bit in the back of the scanner and make two solder connections and plug in some wiring harnesses. The installation of the CE-232 is described as fairly extensive. The PROgramit isn't too bad and varies a tad with each scanner. I like the serial version which runs about $40 for the parts and prefab PCB. There are some other modules that have evolved with the PROgramit also. One allows for the operation of the scanner with a TV remote control. One that will later be available is a RF module that allows programming the scanner some distance from the computer. You wouldn't have to take the scanner out of the vehicle to have a couple of hundred frequencies downloaded.

VERSIONS OF THE OS535
There are three versions of the OS535. What really differentiates the difference is the programming in the CPU.

(Version 1) Cell-Blocked, Code Enabled. This allowed a FCC Approved or Cellular Technichian to enter a code via software which enabled the CPU to tune the cellular bands. This was the commonly sold version until there were some legal issues. This version sometimes can be picked up though, but not in the CONUS.

(Version 2) Cell-Blocked, Not Code Enabled. The OS535 cannot tune cell frequencies and no code can be entered via software to undo this blocking.

(Version 3) Cell-Enabled. Available to FCC approved or cellular technicians. Has the capabilites of tuning all of the cellular bands.

AVAILABILITY OF DEVELOPER'S GUIDES
What you need to start programming for the CE-232 and OS535 are both available. The CE-232 information used to be downloadable from Bill Cheek's Hertzian Intercept BBS but the BBS is no longer readily available. It may be available from his website, but I don't think it is up and running at the moment. You might have to e-mail him (bcheek@cts.com)and see about the availability of it. For programming the software for the OS535, you can get info from Optoelectronics or Steve Hancock's site at http://home.ptd.net/~pro2006/index.html. You might have to e-mail Steve to see where his CI-V protocol info is hidden at. For programming the PROgramit on your own, you will have to look through the IC datasheets and figure it out for yourself. Information on PROgramit can be found at http://www.qsl.net/ka2pyj/. John Montalbano has some nice software that will do about everything that most hobbyists would desire.

USER DEFINED SWITCHES!!!
Another debated item that has come up is user defined switches. The OS535 already has a tape control switch, but there can be more added to it. The OS535 is an addressed RS-232 module that allows it and 15 other (for a total of 16) devices to be daisy chained off of it. These of course have to be addressable also to make sure you aren't gonna have some 'strange' commands going down the pipe. Weeder Technologies has a simple kit with an addressed PIC chip that has 12 digital I/O's coming out of it. Stick 15 of them into various projects and you can have 180 user defined switches just ready to go when you need them. Stick on the X-10 home automation module and have every light come on in your house when the tones are sounded for the local fire department...this works like a charm when you are a member of the volunteer fire department. Do you need some other A/D interfaces or projects to go along with this? Why don't you point your browser to http://members.aol.com/ncdcat/index2.html. There are other places to pick up the kits, plans, etc. but these are two that I have used off and on in addition to my own little designs.

RECORDING
While I don't use a tape recorder for unsupervised monitoring, I do use VOX recording through my soundcard. Now while I have been using RecAll, there are a few other programs out there that also have some neat features that will get the job done. Intercept Technologies made a enhancement for the CE-232 called the Vader board. This allowed you to monitor while you were there or away from you shack and record all picked up transmissions. The nice part about it was that it allowed selective playback by channel, frequency, groupings of similar freqs, time of day or duration. Well, in this present day and age things have changed quite a bit. Why don't you let the computer flex some of its muscle and let it handle all of the work. Since your computer program has all of the channel, frequency, duration, ctcss and other bits of information on all of the transmissions that it incounters, then it is very easy to do a dynamic-data-exchange with a program controlling your soundcard. You can easily sort the recorded transmissions however that you wish very much the way you can sort your received e-mails in Netscape or Explorer by sender, date, subject, etc. The .wav file that you create is dependent on the amount that you have available on a hard drive. Hard drives are cheap and when you are sampling at 5.5kHz, you will get a lot more recorded than the VADER board was capable...I think it could only record 1 hour's worth of continuous audio.

WANNA START WORKING ON YOUR OWN INTERFACE?
Go to http://www.boondog.com/ and you can make your own to decode info sent from the scanner's CPU to the PLL circuitry. Get the PLL IC info's and then do the math and the programming. It would be a nice winter project.

I bought my scanner primarily for listening to the railroads.

Most of Railroad traffic is in the 160 to 162 MHz band. You can use your scanner's search function to look for traffic there. If you are in the western US check out Altamont Press (www.altamontpress.com, I think). They publish timetables for the western US. They include info about mileage, routes, siding, interchanges, frequencies, detectors and a bunch of other info. They are well worth the price.

Detectors are automated equipment placed at intervals along the track. They sense various conditions (they don't all report the same info) including dragging equipment, equipment hanging off the cars (like a shifted load on a flat car), hotboxes, temperature and axle count. It reports this on the road frequency (at low power so only a train nearby can hear it). Normally it reports the mile post (location along the track) and axle count. If it's multiple track it will report which track. They usually only report defects if any are detected. If you set up to watch the tracks near one you get a warning when a train is coming and you know how long the train is. In some locations where there is a lot of trackage you can move around to where the trains are coming based on detector reports.

There is also 457.9375, the End of Train Device (EOTD) or FRED. It transmits periodically from the rear of the train to the head end, reporting brake line pressure. It transmits telemetry so the only use for it is to know that a train is close (the transmitter is low power).

I have the rubber duckie that came with the scanner, a Radio Shack telescoping whip, car roof mount and discone antenna on top of the house. The rubber duckie is usually fine when outside watching trains. The car antenna works a lot better on the road than trying to use the rubber duckie inside a car. I just installed the discone but it already is making a difference. I live on the San Francisco peninsula (25 miles south of SF). With the discone I can clearly pick up UP across the bay, a detector about 6 miles away and BNSF up in Richmond which is about 40-50 miles away. Without it I couldn't get any of these.

At night I like to listen to the local railroads and hear what's going on. With the discone I get pretty much continuous traffic.

While railfanning the scanner gives me warning about trains coming and in some cases why a train isn't coming (waiting for a local to clear the main).

One trick I learned my first time out is that you have to keep current. I was railfanning at Point Pinole where a road ends right at the BNSF right of way and from there it looks down on the SP (UP) ROW. I had the scanner setup with all the frequencies listed in the Altamont Press Timetable for that stretch of BNSF and SP track. When a BNSF engine movement came through and I didn't catch it on the detector I wondered why. There were a couple of other railfans there with scanners and they told me that the track between Richmond and Stockton had been split, radio wise, and the stretch we were on had a new frequency (which I promptly entered). It turned out there was a new timetable out that showed it. I now have that one and need to get a newer one which came out recently (I think).

Sounds like the guys behind his arrest frequent this group and may also have gotten tired of his crap.

I find it hard to believe that his activity on this group did not have some role to play in the whole thing.

I don't know. I ordered a radio from them Wednesday May 5th and am waiting for it. Hopefully it will come today. For comparison I ordered a different radio from www.TechAmerica.com on Sunday and it arrived today. Now I live in Lubbock, TX and Lentini is in CT and Tech America is in Fort Worth, TX (a Tandy Company) so this certainly could explain the difference in delivery times. I don't have anything bad to say about Lentini and I'll follow up on this thread when I do receive the radio I ordered from Lentini.

The discriminator output is the point where you take the audio directly from a chip inside the scanner thus bypassing the audio filtering stages of the radio and in turn giving you a much "crisper" or "less rouded" signal with which to decode data transmissions with. Most data trqansmissions cannot be decoded without this modification.

It is a good modification to make if you are "into" scanners but DO NOT try it unless you are confident of your experience. Find somebody who has good soldering skills and a reasonable knowledge of radio layouts

Simple buy a optoelectronics mini-scout and that will tell you what they are transmitting on and even instantly tune a ar8000/ar8200 scanner (and others) into that frequency. Every "serious" scanner enthusiast should not be without one

Joe Drut wrote in message <7h5eha$4ov$1@news.monad.net>...
Emergency ambulance EMTs are using "new" codes to describe patient
status.
2-alpha, 3-bravo, 5-delta, etc.

Is there a complete posting of these codes somewhere on the net?

Thanks.

Joe,

Sounds like they are using the Advanced Medical Priority Dispatch
System, developed by Jeff Clawson M.D. in Utah.

1=abd pain
6=diff breathing
10=chest pain
17=falls
26=specific illness
29=vehicle accidents

They go up to 32. In the 911 center where I work, these are the top 6
used. (I am at home, I have these memorized :)

For our center (these are subject to local medical protocol):

alpha=basic life support ambulance-no lights/siren
bravo=BLS-red lights/siren
charlie=BLS-red lights/siren; Advanced Life Support-no lights/siren
delta=BLS/ALS red lights/siren
omega=referral to poison control center (not used on radio)

I dont know if there is a list, but check www.medicalpriority.com

Try holding down the lockout button for a few seconds. That's a pretty much
industry standard way to unlock all channels, but I don't know for sure if
the 200xlt works that way. Worth trying anyhow.

What is this doing on rec.radio.swap? What does it have to do with the sale or purchase of radio equipment?

1245. Re: FS: Yupiteru MVT-7100 $275 shipped

Javiation has them brand new for $265. Yes, it does cost a little for shipping, but not much more then $10 or $15. And before the whining starts about "import/export", I have never had any problems in my dealings with Javiation...Jonathan is GREAT!

I wanted those interested to know that I received the radio that I ordered from Lentini today. I would consider their service good and the merchandise was of good quality. I would have no reservations about doing business with them in the future.

If you want to be able to have squelch capabilities you will need a scanner. RadioShack sells a little hand held radio with the airband on it. However, when there is not an active transmission (which is about 95% of the time) you will have to listen to an open squelch. Fortunately since aircraft use the AM mode instead of FM mode the noise from an open squelch isn't quite as annoying as the loud static of open squelch FM. If you are going to listen to the radio alot I would still recommend a scanner.

That is an an idea..
but still do we want folks like this ruining our hobby:
What I received in email today:
You must have me mistaken for someone who cares about this whining.

And no, I don't control the hobby, I just control MY IRC channels. Dalnet channels that are
registered ARE considered by Dalnet to be OWNED by their founders who are sovereign in the
government of their channels, so long as there is no violation of the rules of Dalnet, which
plainly decree I may ban anyone from my channels for any reason or without any reason at all and
any Dalnet IRC-op can easily tell you this is 100% true.

End of discussion.

By the way, your solicitation of others to help you harass me may be a violation of the law I cite
at the bottom of my bio in my QRZ listing, which I strongly advise you to heed. Harassing a
political campaign worker is a federal felony. You are now notified to NEVER bother me again and
to not incite others to bother me. Having notified you of that, there will be no way that you
could deny you are harassing me if you EVER bother me or cause others to bother me again. So just
remember all that you stand to lose if you go to prison.

What this all means is this: LEAVE ME ALONE!

A timestamped copy of this one-time notification to you has been saved as evidence for both your
internet provider and for law enforcement authorities.

Jonathan DeFabritis

This Gentleman decides to threaten everyone..
By not providing a copy, I have no idea what he is talking about
laws.. I didnt use QRZ..

Maybe some letters to www.dalnet.com should do.

Whatta guy eh?

I remember a trip from DC to Seattle. SeaTac Airport was fogged in so they dump us into Boeing Field up a bit north. When we popped out of the fog we were SO LOW over Georgetown north of the runway it made you gasp. We had to have been on instruments coming down. Well, the RF and crap coming up from Seattle Metro proper would flat wipe out comms if a scanner/receiver could interfere. Just a thought.....

Hello, Everybody I own a Optocom and a Explor. Has Anybody have any Tecnical info on these or any mods.? Optoelectronics states that internal circuitry needs to be installed on the Optocom and there is a place for another DTMF ic cant remember the ic number.
the specs say You can have two of these ics working together, Could this be the Hardware.?
Also the Optocom uses a Winbond W78E54 With Flash EEPROM 16k. There is a Security code (bit) That can protect the memory from being changed.:)
Anybody have any other info. Thanks

>posts will not have any interest to lots of other people too.

You appear to be so engrossed in your efforts to convince the rest
of the world that you are incapable of attaining anything in life that
requires effort that you seem to have totally missed the point.

The reason we have thousands of newsgroups is because the world is
filled with millions of people with different interests.

Although your inability to learn Morse code seems to be the current
focus in YOUR life, the rest of us don't necessarily view your lack
of motivation as an earthshaking event.

REC.RADIO.AMATUER.POLICY was created with the sole intent
of giving you a forum in which to air your views. Please feel free to
use it to your hearts content.

Posting your Morse code dribble in multiple newsgroups is not going
to gain you any support. Many unmotivated whiners before you have
proven this point.

Some people have things they want in life because they are willing to
expend the effort required to obtain those things, whatever that effort
may be. It is obvious to us that you are not one of those people.

What apparently is not obvious to you is that the rest of us don't care.

73, Jim KH2D

Thats a neat idea, possibly shutting off the scanner but leaving on a backlight or something.
I have done similar things to batteries for laptops cell phones and other devices like my Makita drill which has had the same nicads for about 5 years. Tricky part would be not letting it sit shorted out for long, that can damage nicads beyond repair.

I dunno what voltage it is but I use 6 1157 tail lights wired in series to discharge my rc car batts and a peltier device to discharge cell batts

Like Mike says, jump on it. It's near top of the line in the 97 RS Cat.
Cheap for a triple conversion unit.
Do yourself a big favor and go buy a RS 20-006 extendable antenna for it for
$9.99 and you will love it. I hear dispatchers that the stock rubber ducky
didn't even pick up. Be sure to collapse the section just above the coil in
the middle of the antenna. Extend it only for the 30 to 54 Mhz range.

Yep. So what's the problem doing this above 50 MHz?

Michael.

Airlines have the right to refuse service for nearly any reason.

>
>
> What else should they ban? Laptop computers? Car keys?

Laptops, cd players, radio recievers and other rf producing electronic devices
not pertanent to the operation of an aircraft are already on the list of "banned devices"
via the Flight Aviation Rules and general policy of most airlines.

>

> (FAR 91.21).

Look a little closer at that regulation. Part of the RCPA of 1996 included provisions related to the use of specified electronic equipment on board any commercial aircraft flying within or over any territory owned or controlled by the US Government.

This vary same arguement was held in here and on rec.radio.scanner some 11 months ago.

Carrying them is ok, using them aboard aircraft is not.

My pro 2040 scanner broke some weaks ago and I was wondering where I can take it to repair it. I live in Spain so I canï¿½t send it to USA because overthere Tandy does not accept my scanner to be fixed. I have tried in Tandy of UK but they have not replied me. Do you know any place inside Europe ? I donï¿½t care how much money It cost to repair it.
Thank you
Jacobo

These are now being considered in Montreal for the Montreal Urban
Community Police Department. From talking with officers there, their
primary use will be field patrol and prisoner transport. They do not
plan on using these vehicles for pursuits. Why, I dont know.

>dont know what you may have witness. I know this for a fact having an agent
in
>the family.

Your family member is living proof that most FBI agents know little more
then which gadget in the car their radio is.

They are using frequencies in the 162-174 mhz range with some residing in
the 418-419 mhz range for interagency comm's with DEA, Customs, etc. They
are analog DES encrypted radios and it is company policy that they use
encryption for all comm's (although this is sometimes forgotten/ignored).
Whats more, the key changes just about once every two weeks because these
genius agents, these crack investigators, these famous detectives... lose a
radio twice a month. Unreal....

I have a friend who is a TECHNICIAN for them who actually knows more than
her own shoe size who provided this information.

But, hey, thanks for playing.

Source record: 118891

Hi, Joe:

I used to own a MX-5000 that had a very similar problem on NFM in the VHF-hi range. The problem would come and go and would sound like the signal was slightly off frequency, muddy sounding, as you described.

I was told that this radio, along with the similar MX-7000 and AOR2002's all suffered from the same intermittent problem that was described to me as "mechanical drift."

Your best bet for a diagnosis is to contact Gerry Oliver at G&G Communications on Long Island, NY. He is very well known and respected in the filed of repairing old scanners. Here is his URL: http://www.iinc.com/ggcomm/

I wouldn't recommend that. Allowing a rechargeable to be just blindly
discharged below 1 Volt/cell runs the risk of permanently damaging the
cell. Only batteries hooked up to "state-of-the-art" analyzers should
be discharged below this level.

Do yourself a favor and buy a battery charger with a conditioner. Rig
up some clips so that it can work with your battery pack.

You might also think about replacing the NiCd pack with a NiMH version
so that you don't have to worry as much about "memory effect"/voltage
depression and you'll get more energy out of NimH (but fewer cycles).

But most of the 900 MHz channels may be digital and/or encrypted, so
you couldn't hear them anyway.

Cellular Telephone

Chs Freqs (base) System Use
991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital). |
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

I would appreciate if anyone has informartion regarding celular phone conversions and modifications, particularly Motorola MicroTac 7500 and Nokia 101.

We want to develop an alarm system for industrial remote equipment monitoring using the celular phone as a transmitter for analog data. the monitoring celurar phone needs to be on scan mode to be able to pick up and feed various transmitting mobile phones located on the different equipment.

Any information or references to similar projects would be very much appreciated indeed.

Regards,
Alf

> posting these sections.

Joseph,

ANY superhetrodyne radio receiver (and all scanners are, as well as
televisions and 99% of all other receivers) is a "radiator" in that is
has an RF oscillator section that makes an RF signal. Same goes for CD
players, computers and basically anything that has a microprocessor in
it.

I've had my BC235 since they came out (about 2 years ago is it?) and I have the same 2 battery packs and I usually charge one (or the other) everyday and I have no memory problems with them. I think the critical thing is to charge them consistently every time so I use a timer. I run the battery until it won't power the scanner any more, then charge it for 15 hours on the timer.

Mike,

If the courts interpret Part 15 as you described then yes, the FCC
does have that authority over anything that has an oscillator in it
(including any device with a microprocessor).

With the bunch of yo-yos we have at the FCC these days, I would not
put it past them. An understanding of the Constitution seems to be way
beyond their grasp: witness the "Gore Tax". When was the Constitution
rewritten to let an agency levy a tax?

To list the PCS CDMA frequencies is just silly. No one can listen to CDMA.
It is called a listening guide" after all. The info is fine, but should
not be part of a "listening guide" since no one can listen in any way.

Sounds like the SS did the same trick to Bill that the lovely BATF did
to Randy Weaver - this kinda crap used to be called "entrapment"
before our court system totally lost their balls regarding limitations
on the government's power. At least the SS didn't murder Bill's wife
and son like the ATF did to Weaver.

Actually, Part 15 covers damn near EVERYTHING. Including, for instance, electric shavers, because the motors can cause interference (sparking, you know), and the FCC did once, I'm told, prohibit sale of some shaver that was badly designed and radiated a lot of hash to AM radios.

I have a Uniden BC 80XLT with the little rubber antenna that come with it. It seems to pick up great in the 400 and 800 Mhz range. But transmissions in the 150 Mhz range sound disorganized (not really so much static but everything is warped). Am currently in the market for a new scanner and the first thing people say is to replace the rubber antenna that comes with the scanner. So does anyone have a suggestion for a antenna for a portable handheld scanner????

Jeff Palmer

1297. BC - 245xlt - will it allow you to name a channel (alpha?)

This subject comes up from time to time, and that is the use of a scanner on board an aircraft. I've heard reports from people saying "Go right ahead, I did and it was fun" all the way to "Your scanner could interfere with the instrumentation causing you to run into a mountain and kill everyone! Don't do it!!!" and all ranges in between.

Well, yesterday on a short business trip to L.A. I decided to see for myself. I brought my scanner on board the aircraft and fired it up as a sat down in my seat, which was right behind the cockpit. My partner had his scanner with him also, and the flight attendant asked him what it was. He told her, she said "Oh.. OK" and left us alone about it.

I started out on the ground control frequency and followed right along until about Palm springs where the crew switched frequencies and I missed where they went. But it was great. Mostly I just heard our plane, but sometimes we'd be close enough to the ground station to pick them up as well. There were no adverse affects, our plane landed right on time at LAX with no problems at all.

So all those stories about planes possibly falling out of the sky or going way off course because of a scanner are nothing more than wive's tales. In fact, a laptop computer puts out more RF interference than my little scanner ever could, and no flight has ever gone off course due to that!

I can't wait to travel again - hopefully I'll be able to follow the whole flight next time. For reference, the aircraft was a 737-400 and the airline was Southwest. So take that scanner with you and enjoy!

Yes, this has come up from time to time. There is no FAA regulation against scanners on board aircraft. Individual airlines may impose their own restrictions. Delta Airlines (which I fly all the time and use a scanner on) allows VHF scanner operations on board only when the aircraft is above 10,000 feet (when they say "you can now use approved electronic devices").

Some airlines strictly forbid it. One way to find out is by looking in the seat pocket flight magazine that every airline has. In the back there will be a definition of "approved electronic devices".

When this was brought up about a year ago, one guy reported that he asked the pilot which frequencies he used and why he wanted to know and the pilot told him.

I tried that several times -- some of them would tell me, others refused to know anything about anything and seemed surprised Delta would allow radio scanners.

So, I just keep a low profile, scanner in the flight bag and headphones so it looks like I'm listening to a CD -- and I have a copy of the approved electronic devices page I tore out of a magazine, just in case.

Have fun.

Its true that people do listen to their radios while in flight but read
91.21 of the FAA rules.
http://www4.law.cornell.edu/cfr/14p91.htm#start
It is clearly forbidden on commercial aircraft. Even the pilot cannot
authorize it (even though they sometimes do).
Obviously you know nothing about the technical side of radio or you
would understand how your scanner can actually block the aircraft's vhf
NAV equipment.
Chances of running into a mountain are remote because the NAV equipment
would indicate an error or loss of signal so the pilot would be alerted.

The technician license does NOT allow you to use ANY of the Ham bands
below 6 meters. Thus you DO have to pass a Morse Code test if you want
to be a HAM without restrictions. A technician license is like a
fishing license that only allows you to fish in a small fraction of
small lakes. Only you don't have to know Morse Code for the fishing
license with no restricions on lakes.

So Phil's intricate experiment is all for naught. One safe flight doesn't negate the law? I am sure his radio has the same spurious IF signal as every scanner ever built. All that hard work and scientific effort for nothing? Darn.

> any good reasons not to....

Well if they would replace the Morse Code with Russian and make you learn Russian with a test to keep your HF priviledges, I'm sure you would be posting some comments on how you don't understand why you need to learn Russian if you only plan to use English. And then the Hams that allready KNOW Russian would tell YOU to shut up and stop complaining and posting as they aren't looking for any good reasons not to have to learn Russian.

There are going to be a lot of posts to newsgroups that don't happen to have subject matter that is of personal interest to you. Lots of YOUR posts will not have any interest to lots of other people too.

Read the threads of the subjects you find interesting and skip over the ones you do not. Seems like a lot of wasted time to reply to threads that don't interest you.

The Pro-62 is a great scanner in my opinion. I've had mine for several years and I love it. Great sensitivity and triple conversion. For $100 I would jump at that ...

Just my opinion ...

Mike Derryberry

Read paragraph (b)
There is an exeption that says that the rule doesn't apply to:
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the
aircraft has determined will not cause interference with the navigation
or communication system of the aircraft on which it is to be used.

So it seems to me that if the operator of the aircraft had determined that a
radio scanner will not interfere with navigation or communication equipment,
then it will be okay to use it.

Ham radio has changed. Packet, Satellite, R/C, television, and so much
more had nothing to do with what you said above. Perhaps all wood
workers should be required to be able to use old hand made tools of the
1800s before they are allowed to use modern power tools for the same
reason you gave.

Knowing that one has gone through, and survived, the identical
> trials and tribulations of his or her counterparts, builds a unique bond of
> dedication and purpose.

If I want to wash my clothes, I would find no bond of dedication or
purpose by using a washboard. I would prefer to use a washing machine
and dryer, and would not appreciate being forced to perform a test using
the washboard before I am given the PRIVILEDGE of being allowed to use a
washing machine. Would you? Or are you one of those lazy people that
think they should be allowed to use Washing Machines without ANY sort of
a test? How would we be able to keep CB'rs from using washing machines?

The instant gratification crowd of today has no
> appreciation for that bond.

Better sell your car and walk to work, don't use that Microwave oven either as that is for instant gratification and convienience too. Get out those two sticks, rub them together, and cook your food the hard way.

Using Morse Code was at one time an instant gratification and convienient thing too over writing and sending a letter pony express. Did people despise Morse Code back then because IT was more convienient and gave instant gratification?

All inventions give us convienience and instant gratification. That is a GOOD thing. Civilization finds better more efficient ways of doing things. Wanting to find an easier and better way of doing things is intelligent. Finding ways to make things more difficult is idiotic and stupid.

Don't forget voltage is only additive in series configured batteries. If they are configured in parallel, only the current output will increase.

Message-ID: <37413da6.37294135@news.3web.net>
Source record: 118942

I have a Pro-67. WAY cool scanner, but I have a question.

I see all this stuff about weather satellites, SSTV etc... What I was wondering is do I stand a chance of picking anything like this up? (See below for freq. range) I can pick up LOTS of digital crap, but have NO clue what it is. (Aside from the pager ones.)

The scanner covers

29-54
108-174
406-512
800-1000 (minus cell)

Any interesting info would be appreciated. I`ve found the usual stuff (except the local police are digital only which SUCKS) but i`m curious as to whether i`m maybe missing something really interesting.

Thanks

Hello.

A friend gave me a very old Bearcat 220 (1979), i think one of the
first computerscanners made.

Is it possible to modify it from 30-31mhz low-band to 30-31mhz
high-band for recieving portable phones?

Maybe someone's experienced with this oldie?

For about $100, there is the new Maycom AR-108.
Icom and Yaesu also make airband receivers but
these are a bit pricey.

And you could always consider a portable analog
receiver available from Radio Shack or other
such shortwave radio dealers.

I haven't heard anything like that. In any case, decoding digital
signals is not a "one size fits all" sort of thing.

I'd look for a scanner with I and Q baseband outputs, and a VCO
steering line which can be enabled or disabled. The rest I'd try
doing with a sound card and some software.

I seldom use the wall wart/charger that came with the scanner...I use a
Maha MH-C777a Universal Conditioner/Charger with all my 4.8-to-12VDC
battery packs.

The Maha charger will condition and properly charge your packs...and I
also use a NiMH pack made by The Nicad Lady for the BC-235.

There's no guessing with this charger...no timing...no
over-charging...no destructive heat damage to your cells, either.

>>...let the battery go completely dead...

NOT recommended - there are "discharge voltage" voltages recommended for
NiMH and NiCad cells...which, of course, the Maha charger takes into
consideration for you!

Check out the Maha site - as well as Cadex Electronics' site - for some
excellent backgroung reference materials:

>Mike

Adding a switch and a couple wires will double the channels to 200.
You access only one set of 100 at a time but it helps.

Also 800mhz can be opened on SOME of the earlier sets, (mine won't)

==========

BC-760XLT BC-950XLT BC-590XLT (BC-600XLT (Uniden) R-1600 (Regency)

can double the memory from 100-ch to 200-ch

article in Monitoring Times, Experimenter's Work Shop, Page 82, June
1997,

1. Find the static RAM memory chip on the solder side of the board
known as IC-13.
Locate Pin 19. It and Pin 20 aregrounded together. Pin 19 is
Memory Address A10,
and there is no good reason to ground a Memory Address. Unless you
want less memory
than possible. Why Uniden did that is beyond me...Uniden pulls a
lot of stunts like that.

2. Remove the solder from Pins 19 & 20. Gently lift Pin 19 up and
off the trace while
the solder joint is melted. Leave Pin 20 grounded (resolder it).
Pin 19 must float
above the board and not touch anything. Be careful to not break
Pin 19 from the IC.

3. Solder one end of a 100-k resistor to the free-floating Pin 19

4. Solder the other end of the 100-k resistor to a nearby ground
spot.

5. Solder on end of a 10-k resistor to the joint at Pin 19 and the
100-k resistor.

6. Solder a wire from the free end of the 10-k resistor to one lug of
a SPST switch.

7. Solder a wire from the other lug of the SPST switch to a source of +5vdc in the
scanner. There is such a spot about 1/3 inch to the right of Pin 24 of IC13. Use a
voltmeter to verify the source of +5vdc. Pin 24 is sourced to +5v but I wouldn't
solder directly there, if I were you.

8. Voile! You're done. Well, you need to mount the switch somewhere first.

OPERATION

Each position of the switch offers 100 channels. 100 x 2 = 200. Thus you will have 2 Blocks of 100-ch each, and otherwise, the scanner and its programming will be completely "normal". If you are careful, the original programming should be preserved, thereby
indicating the switch position for "Home" Block. The other switch position will be for the "New" Block.

If you lost memory and aren't sure, the switch position that turns off +5v to Pin 19 is the original Block.

++++++++++++++++++++++++++++++++

If you have the tone board installed, You can use the extra switch for the preamp (unless you have that too)

Good Signals... LCM

There is a way to have a second bank of memories by adding some switches to
the memory chip address lines. This mod went around about five years ago.
you can only scan one block of channels at a time however.

The beacons are always there. Data chanels might go inactive once in a while,
and the system was intended to be fail safe. Even 19 year old, non tech
grunts can be trained to use the system in an hour or so.

That may be true where you are, but it is not universal. Here in Los Angeles, there are plenty of FBI transmissions in the VHF-high range, with and without DES. Please don't assume that just because your family member's radio happens to be in this range, that it should follow that the entire FBI also utilizes that freq range. Also, I question how much radio expertise any law enforcement agent might have about their own equipment; there are plenty of cases of public safety members not realizing very simple principles of radio operation, such as the fact that CTCSS only filters out signals on the user side, and does not prevent those without CTCSS filtering from hearing the signal (off-topic).

Man... amen and amen...

Try searching for electromagnetic exotica in an apartment 8*? I wound
up using a carefully cut dipole for directional identification, and
my body as an attenuator for isolation --- unfortunately the dipole
lost out in a meeting with my desk, facilitated by a rather large
earthquake 8*(Moved on to other things later...

The stuff I'm hearing - well, it doesn't match the pattern of anything
I've heard before... when it's up, you'll hear something that sounds
almost like trunking data (doesn't demodulate well in SSB - not fsk?)
on one or two freqs and unmodulated(?) carriers on maybe a dozen or so
others. The freqs are generally in the 250-300 MHz range. Everything
generally fades in as a group and out as a group, with an duration that
almost certainly excludes LEO (though probably too short to be classic
high-elliptical). There's a suggestion of at least two band-plans,
but not enough data to verify at present.

Without DF'ing capability, I can't exclude the possibility of EMI from
one (or more) neighbors - but there's nothing to implicate them either -
given the nature of the obviously modulated component it'd have to be
from something digital - a modem, cable device, interactive whiz-toy
or something...

Back to looking for odd correlations 8*)

This is not true for guns. For example, just having the guts, the schematics,
and an unmachined steel tube for a Sten machine gun is considered to be a
felony.
Same with other guns, eg M2 machine gun parts, for an M1 Carbine - even if you
don't own an M1.

So why would you expect the feds to treat scanners diferently?

If you would have bought "Schedule 80" thickness, which is what you should be using, you could have run it over with the car and it wouldn't have even phased it. I still feel strongly that the Schedule 80 PVC makes the best overall mast material, especially if you are not planning on exceeding a 10ft length. By the way, the Monitenna is essentially "omnidirectional" and needs no special aiming.

While the Radio Shack 20-006 telescopic/center coiled antenna rules for coverage, especially in the low vhf, if everything above that is most important, say from 100-1000mhz, then there is no question in my mind (after having the opportunity to try every model Comet, Diamond and Premier makes) that the Watson 881 "SuperGainer" rubberized whip is the best performer. It will cost you about $35.00, but if nothing but the best will do, that is it.

I use my amateur hand held radio in my plane and have never seen any interference, but I understand the commercial carrier's point of view - no control; They have no idea what's coming on board. The law gives them discretion, except for analog cell phones. The FCC forbids the use of analog cell phones when any aircraft is "not touching the ground". There is no such proscription for digital modes, however.
When you take the flying bus, look around; How many people don't turn off their computers? What amazes me is how often I see people faking having their seat belts fastened. More than anything else it's the passengers who make me worry in an airliner.

Sorry, WRONG. Here is the FAR applicable, again:

Sec. 91.21 Portable electronic devices.

(a) Except as provided in paragraph (b) of this section, no person may
operate, nor may any operator or pilot in command of an aircraft allow the
operation of, any portable electronic device on any of the following U.S.-
registered civil aircraft:
(1) Aircraft operated by a holder of an air carrier operating
certificate
or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.
(b) Paragraph (a) of this section does not apply to--
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the
aircraft
has determined will not cause interference with the navigation or
communication system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by a holder of an air carrier
operating certificate or an operating certificate, the determination

required
by paragraph (b)(5) of this section shall be made by that operator of the

aircraft on which the particular device is to be used. In the case of
other
aircraft, the determination may be made by the pilot in command or other
operator of the aircraft.

Effective Date Note: At 54 FR 34291, August 18, 1989, Sec. 91.21 was
revised effective August 18, 1990, as set out above.

Take note, please, of section c), above. It specifically states that the
determination is made by the PIC ONLY if it's not a commercial carrier. The
'operator', in this sense, is the airline, not the pilot.

Note also that section a) specifically statest that the PIC may NOT permit
operation, except as this FAR sets out the rules.

Source record: 118788

Actually, it IS against the law. Scanners radiate from the LO, and
can cause interference.

However, it all falls back to the FAR and the 'Pilot in Command'.
Usually
on any commercial flight they will INSIST (and if you don' t comply
there
can be civil and criminal penalties) that ALL electronic devices are
turned off durring takeoff, ascent, approach, and landing. Most
airlines
will all electronic devices to be operated ONCE flight altitude has been
achieved. However however again, most airlines still prohibit some
devices. Cell phones are out but out. Laptops are usually ok, but
a lot of airlines will prohibit any external devices attached to the
laptop,
like CDs and Mice. It really depends on the airline.

If the pilot didn't say turn off electronic devices, then have fun. But
if they
do, and you get caught, expect a probably confiscation of the unit, and
probably a LOT more.

Will the pilot know a scanner is on board? Well, set up two scanners
sometime in your house. Set one on a single frequency like a weather
station, and then let the other one scan. Depending on the frequencies
you picked, you may get pop - pop - pop on the scanner. You may not.
Just imagine the friend you'll have in the pilot if you start doing that
to
his radio gear in the cockpit.

THAT scanner in THAT configuration would have to be tested on THAT aircraft under a fairly rigorous set of conditions. It's NOT just an 'ok go ahead'.

You CANNOT get a blanket 'go ahead' to do something as assine as expect to be able to operate a scanner on a commercial aircraft. HOWEVER, pilots have been known to allow it, on an INDIVIDUAL BASIS.

Mike

Note that for a commercial carrier aircraft, the pilot is NOT the 'operator'
for purposes of determining whether a device can be used, the AIRLINE is.
They could, if they choose, delegate that authority to the Pilot, but it's
not his to decide.

Probably a not so mild understatement. I actually was denied permission to use GPS on an International Carrier. I asked to speak to the captain about it, and they said he was too busy. What was especially unpleasant was the GPS in question was actually TSO'd, and specifically approved for aircraft use by the FAA. Cabin staff had no idea what it meant to have a TSO.

The regulatory agency in the country that was home to this carrier automatically accepts a TSO from the FAA as being legal for operation in aircraft.

1391. New AOR SCHEDULE software V1.3.1 (recording to disk software) available for FREE download... not a demo!

Newsgroup: rec.radio.scanner
Date: 1999-05-14 00:00:00 UTC
From: AOR UK LTD <info@aor.co.uk>
Message-ID: <2SVnNLAxWCP3EALs@aor.co.uk>
Source record: 118792
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

AOR are pleased to announce a new FREE download software package for the PC Windows based platforms.

AOR Schedule: New recording software tool to enable tuning & recording of the AOR AR5000/+3, AR3000A, AR3030 & AR7030/PLUS receivers with audio being saved to a computers hard drive. Up to 10 independent recording sessions are possible over multiple frequencies.

Schedule is now available from the AOR UK web site:
<http://www.demon.co.uk/aor>

To download directly, use the URL
<http://www.demon.co.uk/aor/software/schedule_v1.3.1.zip>

This software is expected to shortly appear on the two other international AOR web sites:

<http://www.aorja.com>
<http://www.aorusa.com>

++

Also updated recently, AOR AR8200 toolkit: Software full featured package for the AR8200 receiver with memory upload, download, search bank / memory bank editing, labelling, re-sizing, recording, bandscope and more. Now up to version number 1.16.3

++

Other free full package, AOR ARD-2 display tool: Software logging of ACARS and NAVTEX transmissions with scroll back buffer and report generator.

++

Work in progress includes, SDU5500: A support package is also under development for the SDU5500 spectrum display unit. Currently this is in beta-test but will soon be placed on the internet in its final form.

++

In addition to the FREE download packages, several other demos are available to download for commercial packages, these include:

Searchlight: Windows support for the AR3000/3000A receivers.

Spectrum-Master: Windows support for the AR5000/+3 receiver with data-base.

Data-Master: Windows support for the AR7030/PLUS & AR3030 short wave receivers with data-base and other utilities.

PC-Manager for Windows: Support for the AR8000 & AR2700 receivers. Upload / download, editing, bandplan, recording etc. (DOS version for the AR8000 also available to order).

Concerto: Windows support for the AR3030 receiver.

++

Many operating manuals are also available as free downloads from the UK web site in PDF format - Adobe Acrobat Reader required, available free from <http://www.adobe.com/acrobat>

This is exactly what I was talking about. Regardless of the airlines policy, there is just no way a portable scanner is going to hose up an aircraft. The very idea is absurd.

However, FAA reg's do require that passengers comply with ALL instructions given by the flight crew. So the moral is, if the cabin crew asks you to turn it off, then bite your tongue and do so, withouut raising a stink.

-Phil

If that is there diskcone, you do not really need to cut anything.
I have used one of their diskcones for over 10years and it works
great for civil and mil air comms. I havew even received some of the
milsats, but a homemade log-perodic does a much better job. I have even
used it to receive NOAA APT wxsat images, although it does have a dead
zone starting at about 85 degrees.

>my known) to use the two cards. If one accepts to work, the other one
>gets conflicts.
>
>Can anyone help me to do this, please ?
>
As onother guy sadi, disable PnP.
First in the bios, say no to the PnP OD, then sfter the pc boots, go to
control panel, device manager, system resources, PnP , and click disable
the NVRAM/??? box. This piece of junk ("my" work machine does not
support PnP...old 80486.so I can not tell you exactly what the /??? is).
There may be several PnP items. Look at each one, and only disable the
NVRAM update box. That will lock the bio/os from reasigninn any
IRQ/DMA. I used a WSS (genuine Micro$oft card) with a real SoundBlaster
and the only "problem" that I had was with the midi ports. The cards
used different opl chips and caused the midi to sound rather wierd.
But for wav functions, there was no conflict.
Good luck!

1399. What Freqs doea motorola use?

Matt,

Frequencies are assigned by the type of user and by agency, not by the brand of radio. Police, for example, have certain portions of the radio bands for their use. Aircraft have other sections, and boats another. The same goes for shortwave, CB, business users, utilities, railroads and pretty much anybody else who uses two-way radios. They all have certain parts of the radio bands reserved for their use, sometimes with a secondary usage also allowed.
Within those bands are individual frequencies. Frequencies are assigned by department. The police department in one town likely won't have the same frequencies as the police in the next town over. This helps prevent interference from one agency to another.
A large police department may have a mix of radios, some GE, some Motorola, some E.F. Johnson and others, all operating on the same frequencies.
Stop by RadioShack and pick up a copy of PoliceCall Plus. Not only will this book give you the active frequencies in your area, the first few chapters will give you a pretty good overview of two-way communications in general, and scanning specifically.

Aww, for the love of.....

Look, while I appreciate the sarcasm and wit (I've been known to zing a few myself from time to time) the record speaks for itself. The flight crew saw my scanner and did not care. I used it and nothing happened. Period! What else do you want from me?

Tell me something Tim. What if I really *was* NTSB certified as you stated above? Would that suddenly change your mind? Somehow I really doubt it...

No Tim, if you want to pick fights with someone, I'm afraid I won't be much fun for you. Sorry to disappoint. But I still stand by my own personal findings, with one little addendum for some not-so-savvy readers: You should check with the airline and flight crew before you attempt to bring your scanner into the cabin.

There Tim, is that better?

Have a great day :-)

Calm yourself, Spike. You need not become so emotional about another's hobby. Then again, you might constructively use YOUR time to learn how to write and spell and construct proper sentences. The plural of radio is not "radio's"; and what, pray tell, does your word "follious" mean? In a way, I will agree with your position. If you cannot even use simple English, how COULD you learn code?

I have a Uniden BC200XLT scanner for sale. $210 shipped.
Bought radio new in box from fellow ham for $280 due to the collectivity of the radio. It is modified to receive the full 800 MHz band. Only used 3 times. Unfortunately I discarded the box a few moths back however, I do have the instructions, charger, case,and antenna for it. This has been in a non-smoking home and has been taken care of VERY well. If interested, email me at

Dan:

I had one... and like everything else I've had, and sold, I wished I would have kept it! It's a super radio for the money. Currently, I'm using a PCR-1000, but I like the software with the PCR-100 better!

You can make a cheap antenna using the inside wire of your tv coax. Depending on the frequencies you intend to monitor, strip off 1/4 wavelength of the wire braid and pull it down back against the insulator (eg. 300 divided by 136 MHz = 2.21 metres or 7.24 feet. 1/4 of this is 1 foot 9 inches). Then what you have is a 1/4 wave vertical dipole antenna. Hang the wire vertically from a post or run it up inside a piece of pvc pipe. Attach the other end with a proper BNC or whatever connector your scannner requires. Total cost=$0!! You can experiment with different lengths but if you are not transmitting then you shouldn't have too many problems. The 75 ohm impedance of the tv cable shouldn't make any difference either vs. 50 ohms for radio coax. For sure it will outperform the rubber duck antenna or telescopic antenna on your handheld. I also do some scanning using a twin lead j-pole antenna that I built for next to nothing. Plans are available elsewhere on the 'net.

Good luck!

Bill

5WPM isn't impossible. And there are currently efforts to make the
maximum 12WPM. Kind of frosts me when I think about it but I'm glad I got
my 20WPM over and done with.

Hi all!

I picked up a MaxTrac 900Mhz Mobile and a MTX 900 portable at the Trenton Computer Festival a couple of weeks ago. They both had 940.125 as their talkaround frequency (the rest of the channel(s) were trunked). I didn't have a battery for the MTX, so i hooked it up to a power supply and it talked to the mobile. I finally got a new battery and a charger for the MTX. The radio powers on and transmits so that my scanner can hear it. The scanner also picks up the mobile on the same frequency, yet the two don't talk to each other anymore. Is there any way that I could have changed the PL without knowing it? If so, how can I change it back?

The coolest Antenna you can make out of Coax is to simply run the inner coax conductor to ground
and the outer to your antenna input.
The inner conductor is like a magnet to RF with the shield trapping as much RF as it can before the rest goes
to ground. ;)

And in terms of the definition of 'transmitter' as relating to the concerns of commercial aircraft, a scanning radio receiver can very well be a 'transmitter.' To wit: items like CD players and notebook computers.

Jim Strand is guilty of everything he worries that the aircrew might be (ignorance & 'editing' the meaning of scanner)!

This link will help explain how trunking scanners
differ from conventional scanners.

http://www.trunkscanner.com/

If you are in an area that has trunked radio systems,
you'll want a trunktracker, otherwise you won't be
able to follow the conversations as they hop channels.

I had a WR-1500e and was sorely disappointed in it's actual performance. I now own a Optocom and LOVE IT. I couldn't recommend it highly enough. I suppose the thing that surprised me most about it was it's ease of setup and sensitivity. I wasn't expecting it to be so sensitive and yet have no intermod problems which are prevalent around where I live. I think the Optocom is a "must have" for any scanner enthusiast. Besides, the planned upgrades are astounding and the company support is great (and here in the U.S I might add)...

Leaving aside licensing and type acceptance problems (read that as impossibilities....), how are you planning to get the receiver or transmitter to work as a simplex unit. Neither one will slide far enough to do this without component changes or horrendous effects on power out put or sensitivity. The cell R/T split is about 50 Mhz.....

>>
>> David Maddison

Nowhere near 9 db gain on the 100-135 Mhz band. Maybe a 1-3db gain there.
It is practically omnidirectional under 70 MHZ.
I have used it and a small TV antenna turned on it's side and they are
essentailly identical in performance (the Grove antenna is a bit sturdier than
a cheap $19 Tv antenna though). The 9 db gain is near 800 Mhz, from the little
UHF yagi on the end. For lower freqs you have (at best) a dipole with a
compromise reflector.
This might help you if the planes are all one direction, without rotation,
because the front-to-back rejection on most freqs won't be anything like what a
narrow band yagi of even 3 elements would exhibit. The front-to-side rejection
is lower.
In practice I found it worked as an average omni antenna with a little
extra gain from 100-800 Mhz in the direction it is pointed.

Reads like it's ok to me!

&#65533; 91.21 Portable electronic devices.
(a) Except as provided in paragraph
(b) of this section, no person may oper-ate,
nor may any operator or pilot in
command of an aircraft allow the oper-ation
of, any portable electronic device
on any of the following U.S.-registered
civil aircraft:
(1) Aircraft operated by a holder of
an air carrier operating certificate or
an operating certificate; or
(2) Any other aircraft while it is op-erated
under IFR.
(b) Paragraph (a) of this section does
not apply to-
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic de-vice
that the operator of the aircraft
has determined will not cause inter-ference
with the navigation or commu-nication
system of the aircraft on
which it is to be used.
(c) In the case of an aircraft operated
by a holder of an air carrier operating
certificate or an operating certificate,
the determination required by para-graph
(b)(5) of this section shall be
made by that operator of the aircraft
on which the particular device is to be
used. In the case of other aircraft, the
determination may be made by the
pilot in command or other operator of
the aircraft.

I've been using this antenna for several years. The above information
is pretty close to my experience.

I got mine pointed in the general direction of Oakland Airport and San
Francisco Airport. I'm about 50 miles distant. Have tried serveral
other antennas, but this one worked for me.

> What about it? Code test required.

Yup! I'm a + and will soon be a General<g>. CW is really addictive and it's amazing what you notice once you learrn it. Just the other day I was watching a AAMCO Transmission commercial on TV the other day. Their motto is "Double A, beep beep, M, C, O", it subconciously dawned on me that the "beep beep" is Morse for the M <g>. It's also nice to finally be able to know what the repeaters say when they ID.... it's not always just the callsign :) Anyways, CW may not be for eveybody, I guess that's why we have different license classes. There is a place for all of us in ths hobby!

Strongly suggest G&G Communications at the web site address in the previous message.

The fellow is Gerry Oliver and he's a straight up guy who sells both the 10.7 and 10.8 scanner crystals.

He also does scanner repairs when I last checked.

Could the news story have used " file footage ", stock video which is played when real footage of the scene is not available ?

TV news frequently tosses in anything which looks good during the voice over.

As such coverage goes, it could even have been security guards using CB handhelds.

> There is no FAA regulation against scanners on board aircraft.

tree <xcommace@usa.net> wrote:
> ... read 91.21 of the FAA rules. ...
> It is clearly forbidden on commercial aircraft.

The FAA established a rule (FAR 91.21) barring the use of Personal Electronic Devices on board commercial aircraft, then specified a number of exceptions. In particular, airlines may allow PEDs which they have determined do not pose a hazard. Most airlines have sharply restricted or banned scanners, but Delta is a significant exception. On Delta you may use your scanner at cruising altitude, but not during climb or descent or on the ground.

For the text of FAR 91.21 and the stated policies (albeit three years old) of a number of airlines, download
ftp://oak.oakland.edu/pub/hamradio/docs/misc/scan.airline
-or - CompuServe Hamnet Lib 2 AIRLNE.TXT

Rich Wells' "New Scanner Users FAQ" has an good plain language description of FAR 91.21 and its implications.

Phil Smalley <ziggy7445@scanner.yahoo.com> wrote ...
> So all those stories about planes possibly falling out of the sky or going
> way off course because of a scanner are nothing more than wive's tales.

As to the actual risks, ASRS (the NASA Aviation Safety Reporting System) has received a significant number of incident reports from pilots and controllers. You might want to read the May 1994 issue of "Callback", the monthly safety bulletin from ASRS, for some very specific descriptions of inflight incidents with PED interference.

They should be able to prevent anybody they like from boarding for any reason they like. It is their plane, and their business. They can runn off ALL their customers if they like, and fold up, or they can let anybody at all board with anything allowed by the law, and behaving in any manner at all that is not specifically illegal. Or they can strike a middle road somewhwere in there. Thhat's called free enterprise... market economy... supply/demand... and giving the customer what he wants, or losing his business.

I used to always carry my TS-50S in my briefcase. The one time they refused to allow it to pass, (The by-the-numbers instructions they got were to have me turn it on, and naturally I could not, without a source of 13.8VDC) they busted both the lamps for the LCD panel, and I also had to do a full reset. The next time, I was given the option of opening it up and I happened to have my swiss army knife in my pocket, so I did, and showed them there was not room inside for even a single stick of dynamite. After that, I never had a problem.

I have never flown with an HT, and do not even own one. But I bet working your way up the chain of command, you would have eventually found someone who can count past ten without removing his shoes, showed him your license, informed him that you know your responsibilities and obligations under the CFR (quoting chapter and verse sounds impressive to some people) you would have been allowed to board with your HT. This would have helped the next poor ham who had to deal with those mental midgets.

If you try everything and get no satisfaction, when given the choice, don't fly that airline, and inform them of it. Fill out one of the complaint cards that most airlines have, and some distribute, usually in the airline's in-flight rag. I have always got a response when I have sent one in.

When you have a prob with a particular airline, and they simply won't be reasonable no matter what, other hams should be informed. A letter to QST and posts here would together inform probably half of all licensed hams, and would represent a substantial amount of lost revenue to the ucooperative airline.

Funny thing is, the more incompitent someone is, the higher in the chain of
command

he appears to be. I, too have discovered this in my travels.

Source record: 118877

Like the title says I'm looking for a publication called the "Wildland Firefighters National Frequency Guide" It was displayed during a Communications Unit Leader courses in the Pacific Northwest. I've tried NIFC, The Government Printing Office (GPO), NWCG, GSA, and most of the search engines, and trade publications.

Basically, this was a bound version of the notes and xerox copies of each others channel assignments. It would have the name of the forest, region or public lands associated. IT is much more than a scanner guide, as it has Rx, Tx and PL (CTCSS, CG, DPL) information for authorized users.

Any leads, tips or hints would be very much appreciated.

I agree wholeheartedly! In fact, I use my cell at night to entertain scanner listeners (easier for people to follow a conversation at night when usage is low). I have another friend who is into scanning as much as I am and who also has unlimited nights and weekends on his analog phone. We entertain scanner listeners almost every night. If we want privacy we use our landline phones.

I think the best show we put on was on December 20 of last year when I was having a 3-way conversation with him and his cousin. We were listening to a pursuit on my scanner and the pursuit exited the freeway close to my place. I went down the street on my bike with phone and scanner in hand and let my friends and anyone else who may have been listening hear the pursuit go right by me. Yes, I stayed well out of the way and off the street.

People underestimate the power here. The pilot in command can pretty much do any damn thing he wants to. He can be held accountable later, but he is pretty much totally in control. I've had pilots tell me I couldn't
use my HT. I've had other pilots ask me to just tell the flight attendant to
let him know when I'm useing it. And in a two cases, I've even had a pilot let me transmit, as long as he knew when it was going to be done, and in both cases it was only while in level flight. In all cases pilots
wanted the HT totally off during approach.

Back about 1975 I was denied boarding a Delta flight. It was a 'weapon' issue. But the pilot for the flight happened to be there (this was a 2am
flight out of Atlanta and at the time security was at each individual skyway)
and he stopped to see the commotion. He said 'let him board' and I did.

Does anyone know of site where I can get active freg's for police in
Northwest Suburbs of Chicago?
Thanks.

1467. Re: Freqs Needed - Scottsdale PD AZ

There are a ton of them since they are on a trunked radio system.They opperate (for now) on the Maricopa County Trunked Radio System utilizing the Thompson Peak repeater. You can order a nice book of frequencies and other useful information at: http://www.azstarnet.com/~danr/

I saw a demo of the E-Trax software at Scanners Unlimited in San Carlos California on a business trip a couple of weeks ago. It convinced me to get a Optocom and I am real glad I did. I am not on a trunking system here yet but will be next year. You may want to contact them on their impressions of that software. In the coming months Windows software will become available for ALL TRUNKING SYSTEMS in one program..... so have a bit of patience and we will all be in good shape soon. You can reach Scanners Unlimited at (650) 573-1624

Well, the rumor that is starting to surface is that windows software, capable of running ALL TRUNKING SYSTEMS is on the way in the next couple of months. Frankly I don't have a need for the EDACS just yet so don't miss it, but the unit comes with what I consider GREAT software out of the box. The TrakkStar software is so intuitive that I am already set up for my local area listening and haven't read the manual once. Now that is what I call USER FRIENDLY.....I haven't gotten it to crash and it does pretty much everything you could ask for. I like the fact that I can import the PerCon info and just "dump" a large bank from the selected disk onto the program in the form of a file that can be immediately used for scanning.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for

extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne
National Labs Picnic Pavilion, Cass Avenue, south of I-55
in or around Darien or Lemont. The picnic will start
whenever someone arrives. The regular meeting will be in
the Pavilion at 1:00 PM. If the weather is totally
frightful we also have a room inside the Laboratory
building available for us.

The Picnic is BYOE (Bring your own everything) If you want
to eat or drink, bring it with you, as well as your BBQ or
six pack.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign
on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the
actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to
him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the
"instructors". Mystery solved; I had been monitoring the
customer training center for a large computer manufacturer.
The training center has hotel rooms and dining facilities
to accommodate students from out of state. As a
convenience, shuttle van service is provided to local
shopping malls.

Summary

Through books, government records, and radio clubs, scanner
listeners can make use of frequency information compiled by
others. Two-way radio users often fail to identify their
transmissions properly, making it more difficult for
listeners to know who they are monitoring. By examining
radio equipment labeling, and monitoring and taping
transmissions, scanner enthusiasts can unearth new
information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A crystal scanner are not working and the lamps for those channels won't light, replace IC4 or IC5 (type 7400A).

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters
Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is

slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new

frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency

of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100

components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan,

search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band

scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels

are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review

which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were

used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67,"

by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan.

Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The

Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels.

Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes

quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no

scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel

programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state,

and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central

time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated May 10, 1999 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (630)979-5414, electronic mail:
parnass@bell-labs.com. Thanks to Dennis Dale, Rick D.
Wilson, Tom Harker, and ARRL for providing some of the
information.

MAY 1999

May 1 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest,
Info: Joe Holly, AA9HR, 1702 Holly Ln., Grafton, WI 53024,
414-377-2137

May 2 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club
Hamfest, Sandwich Fairgrounds. Admission $?. Ends at 2 PM.
Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-
3219, email: w9icu@tbcnet.com. (Nice mid-sized hamfest out
in country. Lots of tailgating. Few commercial exhibitors.
Always a good time. Fairly good restroom facilities - AJ9S).

May 14, 15, 16 (Fri - Sun) - Dayton, OH. Dayton HamVention.
See http://www.hamvention.org

May 15 (Sat), Wheaton, IL - Giant Computer show (see below).
Dupage County Fairgrounds.

May 16 (Sun), Orland Park, IL Giant Computer Show & Sale
(see below). orland Park Civic Center.

JUNE 1999

Jun 6 (Sun), Princeton, IL - Starved Rock RC. Bureau County |
Fairgrounds. Exit 56 from I-80. Admission $6 at gate. |
Talk-in 146.955, -600, PL103.5 Hz. info: Frank Carraro,
KF9NZ, PO Box 198, Leonore, IL 61332/ 815-856-3773.
http://www.qsl.net/w9mks/ E-mail: w9mks@qsl.net. (Usually an
excellent hamfest. Unlimited space outdoor flea market,
some indoor space, though few big name commercial vendors.
Crude restroom facilities. - AJ9S)

Jun 13 (Sun), Wheaton, IL - Dupage County Fairgrounds. Six
Meter Club of Chicago. Gates open 7 AM, buildings 8 AM.
Tickets $6 at the gate. No booze. Recorded InfoLine: 312-

442-4961. VE testing 9 - 11 AM only. Call InfoLine to preregister for testing. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922.

Jun 13 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

JULY 1999

Jul 11 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. Admission $5 at the gate. Take I-57 to Peotone Exit 327 (east). 146.94 MHz (-600) talk-in. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com. http://www.geocities.com/capecanaveral/hangar/5711 For Reserved Tables and Advanced Tickets, send check (payable to KARS) and S.A.S.E. to: CHIP MOORE, K9IOC, 289 S. Euclid Ave. Bradley, IL 60915, E-Mail: chipm@megsinet.net or to BILL DESALVO, W9OQW, 403 Birch Dr., Shorewood, IL 60431. 815-744-5099.

Jul 18 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 1999

Aug 7 (Sat) - Quincy, IL. Western Illinois Amateur Radio Club Ham Radio and Computer SWAPFEST 1999. 8:00AM to 2:00PM. The Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy with easy access from US Highway 24. Admission $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. Correct me if I'm wrong, but didn't they stop using the 415 phones a couple years ago??? I use to hear AF1 &2 on that freq for years, then it quite. I asked the question about a year ago on this newsgroup as to the status of 415.700MHz and was told by many people that it no longer was used. Just thought that if that is true (after all I haven't hear anything on it for years) you may want to update your information.

For the newest and most current HF and Scanner If check out RadiosOnLine the best E-Zine for Radio Nuts.....

You should be able to clone from a saved codeplug or another radio
without needing lab software. That will "reset parameters".

Why not contact the respective airlines and find out wht their policy really is. You might be surprised as I was. I was involved in the fracus about 9 months ago about scanners in the air and I found out that most of the comments here and back then are just people shooting from the hip with out any actual knowledge of the airline policy. I found that Delta and United said nothing except to not use them on take off and landings.

A handset such as the microtac would have a very low range between
itself and whatever base was used.

You would do better finding type-approved UHF telemetry transmitter &
receiver strips because they offer products "off-the-shelf", meet
approvals, use recognised protocols and usually much better range.

1490. DC cable/plug for Pro-2006

Newsgroup: rec.radio.scanner
Date: 1999-05-15 00:00:00 UTC
From: hanrahan@phoenixat.com
Message-ID: <373dded2.97625430@news.kua.net>
Source record: 118711

I'm using my Pro-2006 in my truck and have been using a DC cable/cigarette lighter plug which looks identical to the DC plug presently marketed by RS as270-1534E. My problem is that while the diameter of the plug appears correct, the barrel of the plug extends out about 3/8" to far when inserted into the DC jack on the 2006...and occasionally slips out as a consequence.
I've been advised by Tandy (via e-mail) that the recommended plug for the 2006 is #270-1534B (note the "B" suffix rather than the "E")..."which is sold at all Radio Shack stores". I've advised Tandy that I've checked with a corporately-owned RS and that the "E" plug is what is being currently sold. I've asked Tandy to provide me with further information on the "B" plug (i.e., availability, differences from the "E" version, if any, etc.).
Does anyone on the list have anything on this? As a mobile 2006 user, do I have to live with a slightly mis-matched plug? Thanks...

Try the US Forest Service's "Boise Intragency Fire Cache"
equipment manager located at the USFS Office in Boise, Idaho.
It's near the Airport.

USFS is a division of the US Department of Agriculture. USFS
has a web site but I can't think of its URL right now.

I refuse to get in a flame war over this. Your understanding of the
FARs are slightly flawed. You might consider a ground school class in
commercial operations to better enlighten you. Or contact a Flight
Standards District Office (FSDO) and speak to an air carrier
specialist.

1496. For Sale or Trade: Motorola MaxTrac 900

Newsgroup: rec.radio.scanner
Date: 1999-05-15 00:00:00 UTC
From: Derek Maxwell <maxwellw@comcat.com>
Message-ID: <7hkphl$jc9$1@remarQ.com>
Source record: 118717
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello All! As you may have seen from my previous post, I recently obtained a Motorola MaxTrac 900Mhz Radio. It is the high power model with 8 Systems and 7 Sub Fleets. It includes scan and phone patch buttons. The radio powers up and transmits great on its one conventional frequency (940.125). I have no use for this due to my upcoming GMRS repeater. I also have a Motorola MTX 900 on the same Conventional channel which works fine, but the two do not talk to each other. The MTX will not come with a battery. The MaxTrac is in excellent condition and includes a hand-mike and power cable but no mounting bracket. I would like to trade the MaxTrac for a comparable UHF Conventional Unit. I purchased the MaxTrac for $150 and two MTXs for $40 total. One does not work, but will be included for parts. If you have something to trade for the MTX, please offer. If you have a non UHF radio that you would consider trading, I might take it. Make me an offer! Thanks to all!

The coolest Antenna you can make out of Coax is to simply run the inner coax
conductor to ground
and the outer to your antenna input.
The inner conductor is like a magnet to RF with the shield trapping as much
RF as it can before the rest goes
to ground. ;)

1499. Re: Why so many AOR AR82000 scanners for sale?

Newsgroup: rec.radio.scanner
Date: 1999-05-15 00:00:00 UTC
From: Christopher J Killgore <ckillgore@worldnet.att.net>
Message-ID: <373E00CB.5C665B02@worldnet.att.net>
Source record: 118720

The 8200 tries to do all things in a small package. Unfortunenatly, it does do some things as well as others. The people who are selling complain about the things it doesn't do especially well. I have had mine for about six months now and it does what I want it to quite well. I monitor VHF 115mhz to 164 mhz and UHF airbands AM-FM. it does pretty good and is bothered by pagers and NOAA weather stations less than the Yupi 7100 and a couple of Unidens I had. Also, I no longer carry a note book or electronic organizer around with all of my programmed channels. The information is all in the radio by being able to label the channels and banks with a text descriptive. And selectivity is good, so I can live with a bit less sensitivity.

Possibly the ability to read english? Well regulatory english, anyway.
It's not so very hard to read, you can learn to do it to. The regulation
flat out STATES that the PIC can't approve it, only the 'operator' can. The
operator is the airline. They can, and some do, delegate that authority, to
the pilots.

I just picked up a Bearcat IV(Electra) at a Flea Market for a buck and it works great...I've got a couple Radio Shack crystal based scanners and decided it is time to have some questions answered...hope someone can help.

1. Are crystals interchangable between the two brands of scanners?

2. There are switches for each crystal on the units (U and L for Radioshack, U, L and UT? on the Bearcat...what are these for?

3. Where can you buy crystals. These would make great special purpose units.

Appreciate any help...

1514. Re: Why so many AOR AR82000 scanners for sale?

Newsgroup: rec.radio.scanner
Date: 1999-05-15 00:00:00 UTC
From: dcisive@earthlink.net
Message-ID: <MPG.11a7f902fd56d553989795@news.earthlink.net>
Source record: 118735

While the selectivity of "most" scanners today is at the very least acceptable, it is indeed the sensitivity or the "ability to hear" that I consider paramount in a scanner. The AR8200 which I recently sold did indeed lack the necessary sensitivity to make it useful. The IC-R2 on the other hand was very capable of reception of many ranges (especially the 118-136 and 150-163mhz ranges)which the 8200 didn't even know was there. to me this in not an annoyance but simply a reason to get rid of a piece of equipment that is just "not doing the job". I have had many emails from others on this newsgroup that have found very much the same results. I recently picked up a Optocom and have found it to be yet another step up in virtually all areas of performance, both in selectivity and sensitivity. I never heard so much activity in the aero and railroad operations frequencies. Oh well, I suppose it is just another one of those live and learn situations.

>to
>his radio gear in the cockpit.
Two comments, generally LO output is low, at most a milliwatt. Keep
in mind that most scanners have a 1st IF well in the VHF range and up
convert on HF and low VHF.

On Aircraft there are several things to worry about.
VHF Nav and VHF Com, both are situated between about 110 and 140Mhz,
well below the LO frequency. GPS is about 1500Mhz, and Satcoms are
much higher, so the LO is well below them.

The reality is most scanners do not have LO's in the frequency ranges
that are likely to be troublesome.

Cell phones present a different problem. with them it isn't the
frequency, it is the raw power involved. An analog mobile puts more
than 1000 times the power of an LO in a scanner. It's a brute force
problem.

Incorrect. The FAR reference is 91.3;

"The pilot in command of an aircraft is directly responsible
for, and is the final authority as to the operation of that aircraft."

Therefore the Captain (pilot in command) has final say so
regarding any matter on board the aircraft. If the Company's (the
operator) policy if in violation of FARs or is a safety issue in the
captains opinion, the captain does not have to obey it.

I just added a section for Ocean City Freqs on my website. We have a beach house there and am there everyweekend. (actually I'm writing this post from Ocean City, MD!)

I just added a new scanner column to my RadiosOnLine E-Zine. The artical is about scanning the Ocean City area.

Check it out http://www.flash.net/~av8tor/radios

Thanks,
George

I have a list of Marine freqs including what they are used for on the
RadiosOnLine E-Zine website http://www.flash.net/~av8tor/radios.

I just updated the Scanner Column artical which talks about scanning the Ocean
City area. The US Coast Guard Freqs are listed there and they are the same for
the entire U.S.

Take a look
Thanks

1525. BC895 Line Recording question

Newsgroup: rec.radio.scanner
Date: 1999-05-15 00:00:00 UTC
From: kt4ht@aol.com
Message-ID: <19990514224542.19243.00000807@ng122.aol.com>
Source record: 118752

In trying to record from my BC895XLT, I've noticed that the Line Out level is variable based upon volume. This means that the speaker volume is on while recording. Is there any way to silence the unit while recording?

(Using the Ex. Spr. jack to record with even the slightest volume over drives the recorder.)

Thanks,

Mike

1526. Where to fix BC 800XLT

1529. FRS radios any good?

Newsgroup: rec.radio.scanner
Date: 1999-05-15 00:00:00 UTC
From: ejdenni@aol.com
Message-ID: <19990514234946.13051.00000653@ng-fh1.aol.com>
Source record: 118756

Are the new FRS radios any good? How far do they really
reach? The advertised two miles seems too good to be true
for these little radios. Do they work between moving vehicles?
Are models with privacy codes worth the extra cost? How
long do batteries normally last?
Any comments on your experience would be appreciated.

Ed

>

Yikes! That's a bit much for me, thanks though! I don't really know what I'd do with 1600 channels in memory... :-)
I did the modification posted and it works very well indeed. But I find now that while it is scanning, in either "100 ch." group, I can hear an intermittent chuffing/popping sound as each channel clears across the scan. It's not loud or annoying (yet!) but perhaps someone can give me some ideas about fixing this, or if it can be fixed at all. Would it help to use some different resistors than those suggested, or adding some capacitance across something?
Mike

Afraid not.
A scanning reciever does use an rf MICER and also uses a 107 MHz IF.

Guess what, if it isn't adequately shieldled and you happen to be scanning
either 10 MHz or 22 MHz above the vhf AIRCom bands, you can create
an enormous amount of interference (consider that the aircraft is essentially
a faraday cage). So, while you are trying to listen to the world outside
the aircraft, you can be creating a hazzard to the aircraft (and yes, the FAA
Will prosecute on that basis alone).

Basically, the point is moot. The FAA has made it clear per the FAR's
that radio equipment of any kind not garmane to the operation of the aircraft
is prohibited from use onboard said commercial flights.

Are you so sure about that? Have you checked to see if the local oscillators radiate rubbish through the unshielded palstic case when you are tuning about? Do you know what frequencies the LO is on when you are tuning to your favourite station? Do you know if your seat assignment and therefore your scanner antenna is near a window closest to the aircraft VHF Com antennas?

Chances are very very slim that you will interfere with nav receivers, sure, but how would you know? (don't get smart. I'm an Avionics Tech and my scanner gets used as test equipment every day) I am also surprised that more of these devices don't interfere with the miniscule GPS signals.

I was asked to turn my scanner off last time I was flying from Orlando to San Francisco, which was a pity, I was having a ball listening to Alabama Police, broadcast AM and FM and hams whilst flying back. They do have that right, it is backed up by the FAR's (Federal Aviation Regulations) and they can have the biggest, burliest cop waiting for you at the gate if you refuse.

Of course, you just be a whole lot more subtle about it. throw the radio along with your keys and small change into the little wooden tray at the xray and let them scan it (pun eh?). They will think it is a mobile phone and cause you no more grief. I know this works, it works for me, in the USA and here in Australia.

When you are wandering the airport listening, don't draw attention to yourself, play it smart and leave the radio in a pocket or on your hip, listen with a pair of walkman headphones, no-one will know the difference. On my last trip I was carrying both scanner and 2m HT. Just have a jacket with big pockets.

When I am listening to frequencies like 460.800 a a very strong but very quiet station comes in, but right in the middle of saying he shifts to 463.075, then he (of whoever he is talking to) shows up on 468.100 and keeps moving around. Does anyone know what this is?

Source record: 118776

Pick a frequency range of interest, say, 165MHz. Use the formula 234/f MHz =
l (ft) so 234/165 = 1.4 ft which is about 17 1/2 inches.

Take the coax, trim off about 18" of jacket, fold the braid back over the
body of the coax and bingo, you have a coax dipole.

OK, the braid will be a bit short, so just fiddle with it til you get the
length but it works, cover it with pvc pipe, heatshrink or whatever and
stick it in the air. It will also work as a 3/4 wavelength antenna at UHF.

Now if you better performance than that, it will cost you. At least the
price of a coathanger.

The simple solution is to insert an unconnected (dummy) plug into the
external speaker jack.

> (Using the Ex. Spr. jack to record with even the slightest volume
> over drives the recorder.)

The better approach is to add an attenuator in-line with the cable from
the external speaker jack to the recorder "mic" input. Radio Shack sells a
40db attenuator/adapter (#264-300) for $3.49. It accepts an RCA plug and fits
an 1/8" jack on the recorder, so you may need an additional adapter to match
whatever cord/jack/plug you have. R.S. was also supposed to sell an attenuator
cable with 1/8" plug & jack, but I've never been able to find it in the
catalog.

1551. PRO-62 over PRO-90 Trunk Tracker

I am now debating on getting a used 90 over the 62. I live out in the
boonies about 32 miles from a decent size town with alot of law enforcement.
I also live about 15 miles from the nearest cell tower .
Am I really going to get another $100 worth of use out of a 90 over the 62 ?
Or will the 62 get anything I am wanting to hear ?
Thanks Guys for all you help the past week or so !

>planes?!?!

No, unless you use the radio during an IFR (instrument) flight. Most
pilots like myself buy a hand held for emergency backup during
instrument flight and we usually have a portable GPS for back-up nav.
Electrical system failures do happen from time to time.
The other widespread use is for sport aviation (homebuilts,
ultralights,etc). Another wide spread use is in vintage aircraft such
as the Piper Cub which has no electrical system.

PakRat,
I'm not an expert, everyone makes errors, but I deal with the
FARs on a regular basis. I've been an airline and a corporate pilot
for almost 30 years. I am a Captain. I do know the regs that apply to
air carrier operations.

So, anyone know where and what frequencies MDT may be in use
in Massachusetts? I'd prefer any responses regarding western MA, but
anywhere will do (southern VT and northern CT would be fine, too).

With 6V and a few components I can build a low power (QRP) amateur
radio transmitter which can send my signal via a good aerial (antenna)
THOUSANDS of miles around the world!

It's commonplace.

Want to know more? Buy some books on ham radio or ask me.

Regards,
Al Bolton

Bill O'Brien <bdobrien@swbell.net>
> Where could someone find technical details on the serial protocol and
> programming commands for a BC 895XLT??

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (TechAmerica's Cat# 910-1471 is 25 cents,
plus 15 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

BC895 Computer Control Commands

"o" =blank, report status; =N, turn on; =O, turn off

AC Clear Clears all memory and resets the radio.
ARo Record status of LINE for AUX OUT
CC CTCSS reports CTCSS Decode status
CDo CTCSS CTCSS search function. Reports 'xx' when found
CS CTCSS reports CTCSS tone number; CSxx set CTCSS tone
CTo CTCSS CTCSS function
DLo Delay status of delay function
(reports DLN in trunk mode, but controls OK)
DSo Data status of data skip function
IC le List selects scan list 'l', entry 'e'
responds with group ID 'nnnnnn'; KEY00 to resume scan
IDo I.D. reports trunk ID at start/end
format: ID s nnnnnn s=S/E n=I.D.
IL ID Lock reports locked out trunk IDs; ILR nnnnnn lock out ID
(list ends w/ "END") ILD nnnnnn cancel L/O
IS Bank reports current scan lists; ISa..a select lists 'a'

KEYnn Keyboard simulates keypress; see listing
LL LimLow report lower search limit; LLfffffffff set limit.
LOo LockOut current channel lockout status
LU LimUp report upper search limit; LUfffffffff set limit.
MA Channel report status of current channel. Non-trunk stopped only
MAccc set channel number and report. Halts scanning.
report: Cccc Fffffffff To Do Lo Ao Ro Nnn
To trunked Do delay Lo lock out
Ao (attenuate) Ro record Nnn CTCSS number
MD: Status reports MDnn - see listing
MUo Mute mute audio MU report mode; MU? report condition
MUN Mute; MUF Force un-mute; MUA normal squelch
PC b Priority reports priority channel for bank b.
PC bnnn set priority channel for bank (force manual)
PMccc Channel reports status of memory channel ccc. (see MAccc)
PMccc ffffffff program channel with freq. (halt scan)
PRo Priority status of PRIORITY scan function.
QUo Squelch reports +/- as squelch opens/closes
RIo Priority reports PST/PRT at start/end of priority reception
RF Freq. current non-memory frequency RFfffffffff sets frequency
RM Mode reports modulation mode, AM, NFM, (WFM)
SB Banks reports scan bank letter(s) SBb..b selects banks 'b'
SG S-meter reports S-meter reading and freq (Snnn Fffffffff)
S-meter range S000-S255 (S014-S026 ?)
SQ Squelch reports '-' when closed, '+' when open
SS Skip reports "search skip" freqs SSfffffffff set skip freq
(list ends w/ "END")
ST Step reports step size ST00nnn00 set step size
000=default, 050=5 kHz, 125=12.5 kHz, 250=25 kHz
WI (unknown): reports Wnnn Fffffffff

KEYnnh Keyboard "h" =blank, press key; =H, hold key

00 SCAN

I dont remeber excatly how it is done but I remeber a switch made into the side of the unit was required and was connected near the big proccessor chip on the front pannel. Also just a jumper from one point to the next would allow the light to come on when the sq. open up.

Cutting here -n- there from all the threads:

> What if you wanted to play the flute, but a law required that you learn
> how to play the harp before you were allowed to play the flute?
>
> What if you didn't like the harp and only wanted to play the flute, and
> other flute players called you lazy for not wanting to waste time
> learning an instrument you had no intention of ever playing?
>
> They have no desire to use morse code. How silly it would be to waste
> the time to learn morse code, only to forget it once one has the license
> to go ahead and use voice.
>
> Only people who intend to USE morse code should learn it.

90% of the automobile drivers out there don't intend to use anything
they *learned* to get their drivers license, why not drop that
requirement too? Just let 'em all drive, drop the roadtest
requirement!

>That's ok we can argue all we want about keeping the code test, but something
>needs to be done to bring people into amateur radio not keep them out.

Ever stop to think that maybe the government intended to keep some
people out? Why not drop the code requirment for commercial broadcast
while we're at it?

>I suspect the same small fraction of 13 year olds are still learning code. Like many
>things that require a little work up front, CW is worth it.
>73

And worth some pride too... ever heard of the rite of passage. Why
not do *something* you can take pride in instead of changing the rules
so you don't have to apply hardly any effort?

> If you're not wired for it, there are many other modes to use. That is one of the
> beauties of ham radio.

Absolutly!!! The whole spectrum above 50 mhz is wide open for those
who have no interest in CW. You knew it before you got into radio...
So what's the problem? (but be forwarned... you'll hear alot of CW
there too. Moonbounce, contesting, etc.)

>The key to keeping code from dying is those of you who are proficient MUST take
>those of us willing to learn under your wing and pass it on to us....

Seems all the *old Timers* around here left me to my own devices...
Wonder *how* I did it..... hmmmmm

>If you efforts to find someone in Ft. Worth fail, Why dont you and your
>buddies get on the 2 meter radio and teach each other?

5 wpm is NO CODE. It's like an open book test. If you *try* to learn
the code with *any* effort at all, you *will* pass the 5 WPM test.
From there you'll meet hundreds of others in the same boat on 40 & 80
mtrs.
Plenty of practice to hone your skills. I had a problem getting over

10 wpm myself once licensed as a P, but got on the air with a friend
of mine for an hour a nite over the period of a week, pushing
ourselves to the limit, and passed General that weekend. *USE IT* once
you get it.

> I have the skill to pass the practical test (and have with the training software) through
> Advanced, yet I hold only a Tech ticket because of the code. I am still trying but I
> haven't found my method for learning code yet. I memorized the tapes, and have tried a
> couple of different computer tutor programs, but so far I have not been able to master
CW.
> I will get it eventually, but it is not coming easy.

Sounds about normal to me...
if you study... it will come......

>If your son doesn't have to learn or like radio to enjoy Morse Code,
>then people who want to use or like radio do not have to learn Morse
>Code.

Did you're mama ever say "who ever said life was fair?" Just 'cause
you want to learn gun handling doesn't mean you have to kill someone.
I don't have a son, but I have to pay school tax.... WHAAAAA!

Hope I hit a few sore neves here. Amateur radio isn't the only thing
in life that will require you to learn something proficiently to do
(unlike my spelling to post to the group).

Take a look back at all the things that got lax on the rules in the
past and see what happened to them. Do you really want amateur radio
to go that route?

The hardest part about learning the code is to just put away all
the excuses you have as to why you < can't / don't have time for /
shouldn't have to / are just to darn lazy to > learn the code *and do
it.*

Next thing you know, after they start packaging up an extra class
radio amateur operators license in all the HF radios (sound familiar?)
They'll be whining that the FCC should abolish CW off the airwaves
'cause they can't handle not being able to understand what is going on
on the bottom half of the band.

I might could stomach letting a small portion of the prime DX bands go for the slow coders (P's),and leave the rest of the licese structure alone. But I hope at least that they leave the extra class alone so that *some* of us can keep a little pride in something that we *worked for* instead of crying about it 'till we got it for next to nothing.

If anyone out there is interested in *learning* CW and going to EXTRA in 6 months, e-mail me. All it requires is about 4 hours a week of *dedication*... You have to *want to do it* to do it.

The others.... FLAME AWAY, got my asbestos boxers on.

Breaker Breaker x.19x.xxx.xxx, catch me on the bottom 150 khz of the band good buddy, c'mon back!

I have noticed for the past 2 day's that the LAPD HotShot Freq 154.8300 is not active. This is the main dispatch for all calls to Divisions and is normally very active. I also noticed that the Air/K9 Tac 484.7125 is more active HotShot calls. Anyone know if this frequency is being phased out or if it is just transmitter problems.

thanks

Average range in a typeical suburban area is usualy around 3/4 of a mile. The 2 miles is when there are no obstructions inbetween. They are line of sight radios. They do not skip like 27 Mhz CB can sometimes.

True. With LOS coms on UHF, the key is antenna height and the amount of
obstacles between.

I went to a search engine, typed "gps" in the search box and found
this:
---

http://www.utexas.edu/depts/grg/gcraft/notes/gps/gps.html

GPS Satellite Signals

The SVs transmit two microwave carrier signals. The L1 frequency
(1575.42 MHz) carries the navigation message and the SPS code signals.

The L2 frequency (1227.60 MHz) is used to measure the ionospheric
delay by PPS equipped receivers.

Three binary codes shift the L1 and/or L2 carrier phase.
The C/A Code (Coarse Acquisition) modulates the L1 carrier phase.
The C/A code is a repeating 1 MHz Pseudo Random Noise (PRN) Code.
This noise-like code modulates the L1 carrier signal, "spreading"
the spectrum over a 1 MHz bandwidth.

The C/A code repeats every 1023 bits (one millisecond). There is a
different C/A code PRN for each SV. GPS satellites are often identified
by their PRN number, the unique identifier for each pseudo-random-noise
code. The C/A code that modulates the L1 carrier is the basis for the
civil SPS.

The P-Code (Precise) modulates both the L1 and L2 carrier phases.
The P-Code is a very long (seven days) 10 MHz PRN code.
In the Anti-Spoofing (AS) mode of operation, the P-Code is encrypted
into the Y-Code.

The encrypted Y-Code requires a classified AS Module for each receiver
channel and is for use only by authorized users with cryptographic keys.
The P (Y)-Code is the basis for the PPS.

The Navigation Message also modulates the L1-C/A code signal.
The Navigation Message is a 50 Hz signal consisting of data bits
that describe the GPS satellite orbits, clock corrections, and other

system parameters.

GPS is funded by and controlled by the U. S. Department of Defense
(DOD).
While there are many thousands of civil users of GPS world-wide, the
system was designed for and is operated by the U. S. military.

If you still want to "jam" GPS, maybe the US Department of Defense
could answer your questions, just click here:

Jill,

Get (or borrow) a tuneable ultrasonic receiver. They are available from
Bat Conservation International and are used to listen to
Bat ultrasonic echo-location sounds. The receiver from BCI
will tune from about 15 KHz to 100 KHz. If the neighbor
is blasting ultrasonic crap then the BCI will easily pick it
up.

In general, the answer to your question is that it is likely that your 1-2 year old radio is not programmed by the manufacturer to pick up the celluar frequencies. As of April 1994 the FCC essentially banned the sale of cellular-capable scanners for sale or manufacture in the US.

All that having been said, you can sometimes, depending on the brand, receive "images" of cellphone calls on your scanner. I.e., cell conversations can show up above or below the cellular band, by double the IF frequency of the scanner, offset from the frequency of the cellphone call you are hearing. It's an electronic "fluke", kinda like looking in the mirror and seeing the distance between your nose and the reflected nose appearing twice as far away as the mirror glass really is. Weird analogy buy it fits.

Hmmmmmm. a bit of topic for lasers newsgroup but never mind. Well I have seen similar posts in the dim and distand past but I'll humour this one:

1) An oscilliscope coupled to an ultrasonic transducer will reveal if there are ultrasonic waves being emitted.

2) Ultrasonic fields will NOT affect head implants to the very best of my knowledge.

3) Ultrasonic waves will not cause a house to tremble, you would use infrasound for that - very low frequency noise - a bit like when a lorry rumbles past the house and the pink dolphin wobbles off the mantelpiece again only to need re-fixing with denture glue.

4) Are you claiming the ultraound can turn off your aunts' bionic ear only or also tape recorders.

5) If the sound is ultrasonic, how do you suppose you can hear it?

6) Looking on the bright side, she will save money on handkerchiefs and wasp killers. Unless she runs a wasp farm in which case this will be a serious inconvenience.

7) ultrasonic waves tend to be easily stopped by solid objects and even VERY powerful transducers would not penetrate brick walls terribly well - unless the transducer was very near.

8) What makes you think the source of this phenomena is indeed her next door neighbour? Could it be caused by other sources?

Do you know anything about the technical capabilities of the next-door neighbour? Is he likely to be the sort who manufactures weaponry like this? If it's any good over distances, if he considers marketing it, he may get substantially more for the intellectual property rights than he will make from acquiring your Aunts house.

It is of course faintly possible that your fist premise was indeed correct and that she has indeed gone batty. It may be contagious which would account for the apparent defect with the brain implanted gentleman and your good self.

Have fun :-)

Mark

You might consider going over the contacts with a pencil eraser (red or green tip), then clean with a Q-tip and rubbing alchohol. Then hit the black conductive rubber pads that touch the metal traces, with alchol as well.

If it's intermittent dropping of key contact, that's probably going to fix it.

You might have a difficult time doing that to something belonging to me. Or to a few other hams I can think of. Not only would you fail in your childish and dangerous endeavor, but you would be wrong, you would have committed an assault aboard an airborne aircraft, and you would go to jail, after getting your bumps and bruises tended to.

Now, should you see someone actually TRANSMITTING or RADIATING ANY STRAY RF such as is commonly present when scanners are in use, without proper permission, you would have reason to be pissed, but there are other, safer, legal ways to stop it. Don't even THINK about grabbing something from the hands of someone you don't know. That is, above all else, very bad manners. Psychopathic idiots are sometimes humored, but never taken seriously. Do have the decency to act in a rational manner and take more practical approaches to the problem before assaulting anybody.

Oddly, they're not going to be testing them down in Los Angeles at all, which I find odd. I would think one of the major tests that it would have to face would be how it would perform in city traffic, how well it fits down the shoulders, etc. The closest one is in Lebec which is along the Grapevine between Los Angeles and Bakersfield.

Greg,

Go ahead and check out
http://web2.airmail.net/lblant1/trunked/tx/harris.htm again. I've
updated the site freqs for the Harris County Smartzone system on
5/16/99.

Unfourtnatly, this system seems to change freqs often for the sites,
so its been tough to keep up with the changes. I'll do my best to
stay on top of it....

1624. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-05-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7hlsni$1d3@news.Hawaii.Edu>
Source record: 118659
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hello everyone!

In my ever widening quest to get information on the LSP Smartzone system, I'm looking for folks who can provide trunking information for this system

I am specifically looking for site frequency and talkgroup information that can be collected using the Trunker utilities. Information for the Acadiana, Monroe, and Lake Charles areas covered by this system is specifically needed. For more information on trunker, see

http://web2.airmail.net/lblant1/dfw/digital.htm

My Louisiana State PD Smartzone information page is located at:

http://web2.airmai.net/lblant1/trunked/la/lsp.htm

Please do stop by and take a look. Any information that can be added would be GREATLY appreciated.

As the FAQ articles indicate, you can purchase crystals for Bearcat,
Regency, and Radio Shack scanners through your local Radio Shack.
They cost about $5 plus shipping the last time I ordered them for
a Bearcat.

In general, the Bearcat crystals are not interchangeable with crystals
for
other scanner brands.

Crystals are not interchangeable between Bearcat and Regency type (Uniden, R/S, etc.) scanners. Different IF and filter freqs.

As for the switches, as I recall, this particular Bearcat can only do VHF High Band and UHF. At any rate, I am assuming the U is for UHF, the L for VHF and the UT is for UHF T Band, 480-512.

Hope it helps

Kurt

>bank?
>Bob

Yes sir. I had to reassure myself of this a few times, by setting up delays, lock outs and priority on channels in the old bank, then manually searching the new bank for the same channel numbers (this bank, of course, with the different freq's programmed) and the settings for the old bank did not carry over. It worked the same way when I switched the procedure around. So I may have taken some time to feel safe with it, but it's working great!

Message-ID: <7hn62b$7q2$1@ins8.netins.net>
Source record: 118685

I have gotten many responses about a homebrew antenna . I am very thankful for that . I just have a couple of questions.
1) Aftrer I strip the outside insulator off , how do I get the braid folded down over the outside? It is too interwoven is there a trick ?
2) Is it the length of the inside core or the outside braid that does the receiving ? Or both, which is more critical ?
3) When I put this inside a piece of PVC, do I run the piece of pvc the whole length of the antenna . Or do I let the part that I stripped off hang out the top ?

Thanks A Million guys !

Take the fuse out of the GPS receivers power supply.
Or
Disconnect the GPS's antenna.

If the trucks send the info back by radio ? Disconnect the interface
between the GPS receiver and the radio.

Personally I think you should leave it alone and get on with your work
:)

Bye for now...

I've found the RS attenuating cord made with 1/8" jacks, but I can't remember the catalog # off the top of my head. Your local RS should have it. BTW, this combo works great, and let's you tape from your scanner very easily using a voice-activated recorder.

You have to know what mdt protocol your local police use and
then you have to find mdt monitoring software that can read
the mdt protocol that used. Most setups for monitoring mdt's
use a discrimatator tap from the scanner to the sound card of
the computer.

Message-ID: <01bea0af$dd4d3c60$0100007f@LocalHost>
Source record: 118499

Raz:

Strictly speaking the coax antenna is a quarter wave vertical dipole, not a j-pole. That aside, here are some tips:

Sometimes I slit the braid with an x-acto knife along one side and pull it apart to get it pulled back. Trying to undo it will dirve you mental.

Now is it the length if the interwire or the braid that gives you the correct receive ?I just didn't know if it mattered if I bunched it up or not .

The correct receive is given by the length of the inside wire. The braid acts as the opposing ground on the dipole, so should be attached to the ground connection on your scanner.

Could you give me the link on the twin lead J Pole

Here's one...there are dozens -
http://ftp.msstate.edu/pub/archives/W5YD/j-pole.txt

When running inside PVC ppe, it doesn't matter what is exposed. I usually drill a hole so that the coax can come out the side, but the bottom is fine too. I glue some proper caps on the ends to keep the water out.

Have fun!

I recently came across a used pro 2009, with no manual.
Could someone tell me the sequence to put the frequencies in. I keep
getting "error" when I try to do so.

Thanks, Doug

Radio Shack has carried a good all-aroung mag-mount scanner antenna for about 10 years...I'm using one of each of my 2 vehicles, and one at home. Good reception across all bands...low band VHF is better than with most other scanner antennas. Costs $29.99...their model number 20-032.

The pilot has the authority to say NO always anytime for any reason.
The pilot has complete control over his/her aircraft.
The pilot cannot give permission unless company policy says OK.
What else is there to argue about?

> they *learned* to get their drivers license,

Give me an example, I can't think of one thing you learn to get a
driver's license that you wouldn't need to know when you drive.

why not drop that
> requirement too? Just let 'em all drive, drop the roadtest
> requirement!

That would be like dropping the rules and technical requirements on the
ham test. Both are needed and used by everyone in Ham radio. We are
talking about Morse Code which does NOT have to be used in order to
operate Ham radio. If it was required to learn how to ride a horse to
get that driver's license, then you could argue about that, but they
don't test for stuff EVERY driver won't need to know in order to drive.

> Ever stop to think that maybe the government intended to keep some
> people out?

No, they droped the code on the tech to get people in, not out. They
would drop the code for other classes too if they could, but it is an
international requirement, so it will take a bit longer to do.

Why not drop the code requirment for commercial broadcast
> while we're at it?
```

There never was or is a code requirement for commercial broadcast.

Remember this: All units are manufactured to transcieve narrow
frequency modulation so it don't matter who makes them, everybody using
onee will still hear everybody else if they all use the same prrivacy
codes. Too bad that the company that can make digital cell phhones
doesn't makes digital FRS radios, eh?

C O R R E C T I O N ! ! ! ! Codes arre something that can or cannot be
ignored by a scanner. Almosst anybody that is into scanning knows that
tone/code boards are avaible as add ons if thee owner so chooses. Once
those codes/tones are programmed into the board then the scanner can all
hear the same the transmissions with the same tones/codes.

Not sure if you have a Radio Shack up your way or
not but I bought the NOVA-42 model that I'm really
pleased with. They are very lightweight and don't make
your ears hot (important factor in FL!), they have about
a 12' cord, and best of all, they have a volume control/
switch assembly that clips to your shirt. A simple flip
of the switch takes the monoral signal from the scanner
and plays it in both ears. The remote volume control is
very nice everytime the Fire dept. sends out a series of
LOUD tones to alert different stations.

Here is an easy answer:

Tell them you want to trade in the GPS for a personal Pager.
This way they can call you every hour on the hour; 24 hours a day. If you get an international pager, then they can reach you anywhere too.

I have heard of these devices as well but mostly of the high frequency type, ones that make you sick or give you a headache and have to be operated in close proximity to the subject. Having the whole house shake that sounds like some very powerful LF device . . . that is pretty scary . . .
Or perhaps it is some type of phase device that uses the houses internal wiring to setup up some kind of oscillation . . . what do you guys think ?

Does anyone have frequencies for the U.S. Emergency Alert System?

Do they have frequencies specified to certain areas or cities, or are
they common nationwide?

Perhaps tell me what, if anything heard there.

Reply pref thru e-mail, but OK here to.
TIA... N4ZN/Mike

Would operating a voice or digital mode help prevent starving and
suffering? (You sound like an NCI member! =:o)

>Get out once in a while and realize there is much more than your stupid =
>code and HAM radio's.

Hey "Spike," over 1700 children die each hour of the day from malnutrition
and disease (a UN statistic); why are *you* worrying about the code and
hams instead of doing something to help prevent all those deaths? Why
are *you* hanging out on a scanner, shortwave, or ham NG and posting to
same, instead of ending the world's suffering?

Here's something else for you to ponder: Which came first, the anti-code
post or the pro-code post?

1703. Scanners and HT's aboard aircraft - definitive

Newsgroup: rec.radio.scanner
Date: 1999-05-17 00:00:00 UTC
From: Brad Granger <bgranger@one.net.au>
Message-ID: <373f9522.0@pink.one.net.au>
Source record: 118541

Might I offer the following from the FAR's (Federal Aviation Regulations)

Sec. 91.21 Portable electronic devices.
(a) Except as provided in paragraph (b) of this section, no person may operate, nor may any operator or pilot in command of an aircraft allow the operation of, any portable electronic device on any of the following U.S.-registered civil aircraft:
(1) Aircraft operated by a holder of an air carrier operating certificate
or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.
(b) Paragraph (a) of this section does not apply to--
(1) Portable voice recorders; (2) Hearing aids; (3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft
has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by a holder of an air carrier operating certificate or an operating certificate, the determination required
by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other
aircraft, the determination may be made by the pilot in command or other operator of the aircraft.
Effective Date Note: At 54 FR 34291, August 18, 1989, Sec. 91.21 was revised effective August 18, 1990, as set out above.

In the background to these notes, mention was specifically made of passengers electronic receivers and the potential for interference. Notice that it says that the Operator and not the pilot has the discretion to permit use of such equipment on Air Carrier aircraft.

What's with you guys and this "6 volt" fixation? Small transmitters can be made to operate on 1.5 volts, or less. My Kenwood HT operates on 4.5 volts, or less, at times. I've operated my UHF repeater from 50 miles away in the 30 milliwatt positioin; that's 0.03 watts.

Thats a great Idea about throwing the radio in with a few other things on the tray so it seems like its a phone and they give you no problems about it. I wouldnt want to be responsible for me and my family denied or missing a flight over a radio. They would be realy mad!!

Glad I could be of some help. It's an easy modification, just be careful of accidentally shorting other solderpins/surface-mount components when installing the resistors. It's fairly simple to overlook (for me at least!) little things like that!
Have fun, the new channel space is great to play around with!

Glad to hear it. Do you find the frequency-dependent modes to be limiting in any way? I read that in the military bands between 220-400 MHz, you only have AM to use as a mode... Seems a little inflexible, as there are other gov't comms. there in FM (NFM) mode. But this was an older magazine review. Maybe Uniden changed this to freq. INdependent modes...

I *think* I know what that is. in the AMAZING! catalog (can't find it right now) they sell several forms of transducers ment for the specific porpose of harming humans. They are probably low in quality, so that is why it dosn't do all the horrible things it claims to do.

>Can I send a scanner by mail or UPS to a friend there?
>
>Jerry

Yes it is legal.
There no real restrictions regarding listening, we are honor bound not to
listen to cellular calls, there is no blocking requirement.
Your friend will need an alternative means of power, we run on 240volts,
perhaps they can buy a dc plugpack to suit.
If you are posting it, UPS will cost a bomb, might require Customs
clearance. Make sure it is second-hand. Mark the Customs declaration as
gift. New units are dutyable.

The next door neighbor could be using a 12 inch sub woofer (or larger) with
a high power amp running at low frequency.....
This can make the house tremble and could be lower enough that the human ear
will not hear it but the body will feel it. (I know this works.... my car
sound system is a perfect example)

Food for thought! get a CB radio with a really filthy power amp that has
high harmonics and parasitics and have it transmitting all the time.....that
should give the next neighbor something to think about!

http://members.aol.com/noobody/scan4.htm
and
http://members.aol.com/scanshack/Bc890xlt.pdf

at above location it shows how to mod the 890 to receive cellular is this
info correct i thought the 890 and 895 were not able to do this with a mod
see below

BC890XLT

Subject: bc890xlt-800mhz full restore
1. remove all cabinet screws.
2. remove 4 face plate screws and 1 bracket screw at center of main board.
3. carefully depress the outside edges of faceplate shield and tilt down.
4. unplug j4 and j5 and ribbon connectors j501 j502 and j503.
5. remove faceplate and logic board.
6. position board so microprocessor chip is on left and memory battery on
right.
7. locate the 3 chip resistors at chips upper right..marked 104 and
carefully desolder.
8. install the chip resistor at the 2 empty pads closest to memory battery.
9. reassemble carefully in reverse order.
10. test by entering freq. around 870 mhz.

On Fri, 14 May 1999 20:37:41 -0400, RADIO MAN <theoldbrookltnkid@ameritech.net>
claims to have created this little gem:

[]

>WHAT WITH ONLY 6 VOLTS, YOU CAN MAKE A SIGNAL GO 50 + MILES?
>COME ON NOW!
>--
>RADIO SCANNERS, CITIZENS' BAND RADIOS, SHORTWAVE RADIOS,
>FAMILY RADIO SERVICE RADIOS, HAM RADIOS ARE FUN!!!!

1) Stop friggin' shouting you disbelieving wally - Iv'e another flaming
headache!

2) 6 volts & 50 miles is nothing out of the ordinary. Easy peasy on HF and on
VHF with the right conditions. It is not the battery voltage that counts, it's
wattage and conditions.

I was on the top of Portsdown Hill and worked (with a handheld at 7.2v battery)
a guy in Portsmouth.

Ok you say that's only 1 mile at most & you would be quite correct except we
were working via a French repeater somewhere in Mid/south France (cant remember
exactly where now). The return path was over 400 miles (800 miles in all). So
400 miles on 7.2 volts.

So there! Nerrrrr!

Dear folks;
I've realized what the problem with CW is. One has to
learn it. On the other hand, it's the only form of digital communication
which humans can hear and translate. Of course learning cw would be a lot
more fun if it were installed in a special brain implant. This would
stimulate the pleasure centre whenever the person got a character right.
I can imagine the following conversation between a married couple:

Wife: "Let's go to bed darling."
Husband: Not yet my love, I need to practice more cw."
Wife: "But you've been at it all day."
Husband; "Aw just five more minutes alright?"

If that was possible to do, cw would become more popular than sex and it
wouldn't have the annoying side effect of children either. Hmmm, I just
the spirit of W. C. Fields applauding and cheering. But seriously folks,
cw could be more fun if it were taught correctly. I unfortunately learned
it the wrong way so it took me so long to get it right.
By the way, have you listened to the 40M cw portion of the band
with a wide filter? It sounds like an avant-garde music piece. Perhaps
that could be a new musical form. I think I might just create my own cw
piece using oscilators to generate tones which could be listened to with
the filters in a graphic equalizer.
Oh, one more thing, why doesn't some sci. fiction writer develope
a race of beings who communicate in cw? I've never once, in all my avid
reading, come across that.
Yours,

Bruce Atchison, a starving electronic music composer. Please enquire about
receiving a list of my 14 inexpensive cassette albums.

There are almost no restrictions to using a scanner in Sydney. We have
no laws against selling or modifying a scanner to cover cellular.

It is a myth that humans can hear RF without help from electronics. If electronics are needed anyway, what's wrong with a little more electronics on that single chip?

> But seriously folks, cw could be more fun if it were taught correctly.

That's like saying that chocolate ice cream could be fun if taught correctly. Not true. I simply do not like chocolate ice cream. People vary in their ideas of "fun". What's wrong with live and let live?

> Oh, one more thing, why doesn't some sci. fiction writer develope
> a race of beings who communicate in cw?

Actually during evolution, several species tried Morse code for communications but predators with higher throughputs caused their immediate extinctions. :-)

> help big brother is watching

Yes it is possible. No, it's not likely you'll be able to build one yourself. It's too complex. If you did actually build one and use it, somebody from DOD or the FAA (at the very least) would probably be knocking on your door. Don't forget, aircraft use GPS too. They won't be amused if your jamming signal wipes out everything for a hundred miles in all directions.

I would look at solutions such as placing a grounded shield over the antenna. You might even see if there is a connector at the base of the antenna and disconnect the beast. You might also look at how the radio is set up to squirt the signal on the air. Perhaps recording the modem and inserting that sound again through the microphone will mislead the computers enough (figure that two data squirts come in, which will the computer system pay attention to? --probably the last one)

And yes, big brother is watching you. We're installing the same systems where I work. We're sick and tired of hearing about company dump trucks and backhoes parked at a 7-11 for four hours. Don't you think an employer deserves to know about things like that?

If the employer is paying you, hes he/she has a right to know where you are and what you are doing at all times (that you are being paid).

Especially when you are told about these things up front even before you are hired. That makes it 100% your decision whether or not you want to work for such a person.

What's the big deal? You're being paid to do a job, then you get defensive because you are "being watched". If you have nothing to hide, what's the problem?

I own a small business (11 employees) and I have 2 video cameras installed that cover 90% of the shop. The cameras are on all the time, but were installed to be security cameras mainly for at night when we are closed.

At first, the guys all bitched and whined and acused me of not trusting them. I told them ahead of time they were going in and why.

After I laid it out like above, all but one of the guys was ok with it. Everyone suddenly became paranoid and wouldn't talk to each other unless they had to for work reasons. After a few months, that one guy had pretty much forgotten about it just like everyone else and they all goof off just as much as they did before (which wasn't much anyway).

I've got one better: A friend of mine was standing on the beach in Tel-Aviv with a handheld radio and a 5/8 wave telescopic antenna was playing around on 146.52 MHz. Running 300 mW he was able to communicate directly with another guy using similar radio gear 900+ KM away on a beach on the island of Malta. This was direct --no repeaters.

I wouldn't have believed this story except that while I was in Tel-Aviv, we used to hear repeaters and simplex operations from Cyprus almost every evening. Communications to Malta was also not unusual, though not exactly common. Atmospheric ducting over water is an amazing thing...

Tim,
The fact remains that not one of those subject areas you
identify here are separate pass/fail test elements. You can
ignore several subject areas and still pass the test. Not so
for CW testing which is given, graded and must be
passed as a totally separate test element. I have said
before that if CW was to be integrated into the overall
test score rather than as a separate pass/fail element
as it is now, that I'd have no problem with that.
Indeed, when the CW test goes away, I expect that
there will be some CW related questions added into
the theory test just as there are questions already
there on other modes.

Cheers,
Bill K2UNK

>>
>> The SVs transmit two microwave carrier signals. The L1 frequency
>> (1575.42 MHz) carries the navigation message and the SPS code signals.
>>
>> The L2 frequency (1227.60 MHz) is used to measure the ionospheric
>> delay by PPS equipped receivers.
>>
>> Three binary codes shift the L1 and/or L2 carrier phase.
>> The C/A Code (Coarse Acquisition) modulates the L1 carrier phase.
>> The C/A code is a repeating 1 MHz Pseudo Random Noise (PRN) Code.
>> This noise-like code modulates the L1 carrier signal, "spreading"
>> the spectrum over a 1 MHz bandwidth.
>>
>> The C/A code repeats every 1023 bits (one millisecond). There is a
>> different C/A code PRN for each SV. GPS satellites are often identified
>> by their PRN number, the unique identifier for each pseudo-random-noise
>> code. The C/A code that modulates the L1 carrier is the basis for the
>> civil SPS.

>>
>> The P-Code (Precise) modulates both the L1 and L2 carrier phases.
>> The P-Code is a very long (seven days) 10 MHz PRN code.
>> In the Anti-Spoofing (AS) mode of operation, the P-Code is encrypted
>> into the Y-Code.
>>
>> The encrypted Y-Code requires a classified AS Module for each receiver
>> channel and is for use only by authorized users with cryptographic keys.
>> The P (Y)-Code is the basis for the PPS.
>>
>> The Navigation Message also modulates the L1-C/A code signal.
>> The Navigation Message is a 50 Hz signal consisting of data bits
>> that describe the GPS satellite orbits, clock corrections, and other
>> system parameters.
>>
>> GPS is funded by and controlled by the U. S. Department of Defense
>> (DOD).

1749. High Frequency Noise Help

Newsgroup: rec.radio.scanner
Date: 1999-05-17 00:00:00 UTC
From: georgeandbarbarabush@yahoo.com
Message-ID: <7hnmm1$f0t$1@nnrp1.deja.com>
Source record: 118629
Cross-posted to: alt.radio.pirate,alt.lasers,rec.audio.opinion,rec.radio.scanner

I was hoping somebody could help me with a little dilemma I am involved with. My aunt is currently feuding with her next-door neighbor -- the neighbor is trying to run my aunt off her land so he can buy it (the Hatfields and the McCoys are still around, hehe).

At first he used his step-grandchildren to harass her, but now I'm afraid he's gone high tech. He is aiming some sort of high frequency noise at my aunt's house, which nobody can quite hear but everyone can feel. I thought she might have gone batty before I went over there today and felt it myself. My ears immediately felt stopped up and "tight" like I was going up in an airplane. It also made my skin crawl, and my aunt's nose quit running. The animals were going crazy -- the dog was hiding and her cows went away from her house to another pasture. My aunt also claims it kills wasps and when she tries to record the sound or listen to it on her "bionic ear" it shuts the thing off.

Her children have stayed with her and they have verified that at night it shakes the whole house. She has a friend who just had a chip implanted in his head to restore his hearing and when he came over and visited the chip quit working right then and there, despite working perfectly for weeks. His doctors in Houston and some that were flown in from up North could find nothing wrong with it, except maybe that some sort of interference had stopped it. Though it's hard to comprehend that anyone would do such a thing to a 75-year-old woman, something is going on.

Has anyone ever had anything like this happen? We suspect that it might be one of those "game repellent" devices that emit a high frequency sound to drive off deer or other wild animals. Or, it could be some sort of odd electromagnetic field. This just started a month ago and since then she has gotten no new appliances or has not altered the place in any way. Will an ultrasonic device pointed at a house cause all the above symptoms? It has been reported to the local sheriff very discreetly but he doesn't know about sound theory or anything scientific. Is there any way to confirm that there is a high frequency sound is being projected? Will an oscilloscope work? Is there an easier/less costly method of going about this? What's the best device to detect this sound? Is there a way to reflect the high frequency noise back onto the object that is emitting it? I am a very sane person and this is in now way intended as a prank or joke. Any help/replies will be greatly appreciated!

Thanks!

Jill

1750. FS: JRC NRD-545 DSP Receiver

Newsgroup: rec.radio.scanner
Date: 1999-05-17 00:00:00 UTC
From: Manuel <mmaseda@gte.net>
Message-ID: <c%I%2.6958$mj.165030@dfiatx1-snr1.gtei.net>
Source record: 118630

I have for sale a perfect, as new, NRD-545 DSP receiver. The radio is less than 1 year old and has the latest firmware upgrade. This is a non-blocked unit imported from England and covers 100 khz - 2 ghz. It includes the optional CHE-199 wideband converter and the CGD-197 TXCO. Includes original box and manual. $2,000 firm. I will not ship outside the U.S.

Manuel

1751. "Secret CB" volumes 26, 27 (FS)

Newsgroup: rec.radio.scanner
Date: 1999-05-17 00:00:00 UTC

"Secret CB" volumes 26, 27 for sale...

These books are in great shape, showing some wear on the covers,
but other wise in great shape. pages are attached and in great shape.
These volumes cover a wide variety of CB radio tune-ups,
modifications, schematics & more.
I have the info. on what each volume covers on a file I will send
apon request.

I am asking $10.00 each.
Price includes shipping in the USA

If interested
contact TRAMD300@aol.com

Thank you...

1752. FA- RADIO SHACK DSP - NO RESERVE

itle of item: Radio Shack PRO-90 trunktracker scanner
Seller: n8ppz73@aol.com
Starts: 05/12/99, 05:03:29 PDT
Ends: 05/19/99, 05:03:29 PDT
Price: Currently $122.50
To bid on the item, go to:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=103223737

Item Description:
Near Mint PRO-90 trunktracker. Has some small scratches on the bottom of the case, but otherwise cosmetically and electronicly fine.

This is the same as a BC-235XLT. Basic features
Tracks Motorola Type I and Type II or Hybrid 800mhz systems

300 channels, covers your usual VHF and UHF freq's as well in traditional scan mode. Also has preprogramed search for Air, Police, Fire, and Weather

a Great scanner.

Happy Bidding

Buy to prepay by Money order, with $10 shipping and insurance from Ohio

So, do you think I can do 100 miles?

1756. Re: Pro-70 Scanner ?

Newsgroup: rec.radio.scanner
Date: 1999-05-17 00:00:00 UTC
From: genxman67@aol.com
Message-ID: <19990516214141.18362.00001714@ng-cb1.aol.com>
Source record: 118636

I got a Pro-70 last year as a gift. It is an easy scanner to start with. I have used it for a year and had no problems, until my county switched to a Trunked system. So I made the upgrade to the pro-91. But if your area does not use the 800mhz band its a good deal.

Salient point, Laine.
Also, idiots who DO get nailed for doing something so patently wrong give all of us a bad name, and make it that much easier for b.s. anti-monitoring legislation to zip right through our hallowed halls of Congress.
I fear for the future of the hobby, precisely because of fools like this "journalist" (I use the term VERY loosely...).... How stupid can a person be?
(Of course now I have to write MY name right after that last question!) :-)
Mike
